In addition, we offer you free demo for you to have a try before buying, so that you can know what the complete version is like. We have online and offline chat service stuff, and they possess the professional knowledge for AWS-Developer Exam Braindumps, if you have any questions, you can consult us.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample

Questions (Q358-Q363):

NEW QUESTION # 358

An IAM role is attached to an Amazon EC2 instance that explicitly denies access to all Amazon S3 API actions. The EC2 instance credentials file specifies the IAM access key and secret access key, which allow full administrative access. Given that multiple modes of IAM access are present for this EC2 instance, which of the following is correct?

- A. The EC2 instance will only be able to list the S3 buckets
- B. The EC2 instance will only be able to list the contents of one S3 bucket at a time
- C. The EC2 instance will be able to perform all actions on any S3 bucket
- D. The EC2 instance will not be able to perform any S3 action on any S3 bucket.

Answer: C

NEW QUESTION # 359

Company B provides an online image recognition service and utilizes SQS to decouple system components for scalability. The SQS consumers poll the imaging queue as often as possible to keep end-to-end throughput as high as possible. However, Company B is realizing that polling in tight loops is burning CPU cycles and increasing costs with empty responses. How can Company B reduce the number of empty responses?

- A. Set the Imaging queue `ReceiveMessageWaitTimeSeconds` attribute to 20 seconds
- B. Set the imaging queue visibility `Timeout` attribute to 20 seconds
- C. Set the `DelaySeconds` parameter of a message to 20 seconds
- D. Set the imaging queue `MessageRetentionPeriod` attribute to 20 seconds

Answer: A

NEW QUESTION # 360

Is there a limit to how much throughput you can get out of a single table in DynamoDB?

- A. Yes, not more than 1,000 writes/second or 1,000 reads/second
- B. Yes, not more than 10,000 writes/second or 10,000 reads/second
- C. No, but if you wish to exceed throughput rates of 10,000 writes/second or 10,000 reads/second, you must first contact AWS.
- D. No

Answer: C

Explanation:

In DynamoDB, you can increase the throughput you have provisioned for your table using `UpdateTable` API or in the AWS Management Console. If you wish to exceed throughput rates of 10,000 writes/second or 10,000 reads/second, you must first contact AWS.

NEW QUESTION # 361

A developer is building an application that runs behind an application Load Balancer (ALB). The application is configured as the origin for an Amazon CloudFront distribution. Users will log in to the application using their social media accounts. How can the developer authenticate and authorize users?

- A. Authorize the users by calling the Amazon Cognito API in the AWS Lambda authorizer on the ALB
- B. Configure Cloudfront to use Amazon Cognito as one of the authentication providers
- C. Validate the user by inspecting the tokens using AWS Lambda authorizers on the ALB
- D. Configure the ALB to use Amazon Cognito as one of the authentication providers

Answer: B

NEW QUESTION # 362

A company has three different environments: Development, QA, and Production. The company wants to deploy its code first in the Development environment, then QA, and then Production.

Which AWS service can be used to meet this requirement?

- A. Use AWS CodeCommit to create multiple repositories to deploy the application.
- B. Use AWS Data Pipeline to create multiple data pipeline provisions to deploy the application.
- **C. Use AWS CodeDeploy to create multiple deployment groups.**
- D. Use AWS CodeBuild to create, configure, and deploy multiple build application projects.

Answer: C

Explanation:

Explanation

<https://docs.aws.amazon.com/codedeploy/latest/userguide/deployment-groups.html>

"You can associate more than one deployment group with an application in CodeDeploy. This makes it possible to deploy an application revision to different sets of instances at different times. For example, you might use one deployment group to deploy an application revision to a set of instances tagged Test where you ensure the quality of the code. Next, you deploy the same application revision to a deployment group with instances tagged Staging for additional verification. Finally, when you are ready to release the latest application to customers, you deploy to a deployment group that includes instances tagged Production. "

NEW QUESTION # 363

.....
