## IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q196-Q201):

NEW QUESTION # 196

What is the best way to protect privacy on a geographic information system?

- A. Using a wireless encryption protocol.
- **B. Limiting the data provided to the system.**
- C. Using a firewall.
- D. Scrambling location information.

**Answer: B**

Explanation:

Explanation/Reference: [https://www.researchgate.net/publication/2873114\\_Protecting\\_Personal\\_Privacy\\_in\\_Using\\_Geographic\\_Information\\_Systems](https://www.researchgate.net/publication/2873114_Protecting_Personal_Privacy_in_Using_Geographic_Information_Systems)

### NEW QUESTION # 197

Which of the following is one of the fundamental principles of information security?

- **A. Confidentiality.**
- B. Accessibility.
- C. Accountability.
- D. Connectivity.

**Answer: A**

Explanation:

The fundamental principles of information security are often summarized by the CIA triad, which stands for Confidentiality, Integrity, and Availability. Confidentiality ensures that information is not disclosed to unauthorized individuals, entities, or processes. It is crucial in protecting personal and sensitive data from unauthorized access and breaches. This principle is widely recognized and referenced in various information security standards and frameworks, such as ISO/IEC 27001 and NIST SP 800-53.

Reference:

ISO/IEC 27001:2013, Information technology - Security techniques - Information security management systems - Requirements.  
NIST Special Publication 800-53 (Rev. 5), Security and Privacy Controls for Information Systems and Organizations.

### NEW QUESTION # 198

#### SCENARIO

Please use the following to answer the next questions:

Your company is launching a new track and trace health app during the outbreak of a virus pandemic in the US. The developers claim the app is based on privacy by design because personal data collected was considered to ensure only necessary data is captured, users are presented with a privacy notice, and they are asked to give consent before data is shared. Users can update their consent after logging into an account, through a dedicated privacy and consent hub. This is accessible through the 'Settings' icon from any app page, then clicking 'My Preferences', and selecting 'Information Sharing and Consent' where the following choices are displayed:

- \* "I consent to receive notifications and infection alerts";
- \* "I consent to receive information on additional features or services, and new products";
- \* "I consent to sharing only my risk result and location information, for exposure and contact tracing purposes";
- \* "I consent to share my data for medical research purposes"; and
- \* "I consent to share my data with healthcare providers affiliated to the company".

For each choice, an ON\* or OFF tab is available. The default setting is ON for all Users purchase a virus screening service for US\$29.99 for themselves or others using the app. The virus screening service works as follows:

- \* Step 1 A photo of the user's face is taken.
- \* Step 2 The user measures their temperature and adds the reading in the app.
- \* Step 3 The user is asked to read sentences so that a voice analysis can detect symptoms.
- \* Step 4 The user is asked to answer questions on known symptoms.
- \* Step 5 The user can input information on family members (name, date of birth, citizenship, home address, phone number, email and relationship). The results are displayed as one of the following risk status: "Low", "Medium" or "High" if the user is deemed at "Medium" or "High" risk an alert may be sent to other users and the user is invited to seek a medical consultation and diagnostic from a healthcare provider.

A user's risk status also feeds a world map for contact tracing purposes, where users are able to check if they have been or are in close proximity of an infected person. If a user has come in contact with another individual classified as 'medium' or 'high' risk an instant notification also alerts the user of this. The app collects location trails of every user to monitor locations visited by an infected

individual Location is collected using the phone's GPS functionality, whether the app is in use or not however, the exact location of the user is 'blurred' for privacy reasons Users can only see on the map circles Which of the following pieces of information collected is the LEAST likely to be justified for the purposes of the app?

- A. Relationship of family member
- B. Phone number
- C. Citizenship
- D. Date of birth

**Answer: C**

Explanation:

Of the pieces of information collected by the app described in the scenario provided in the exhibit you shared, citizenship (option D) is LEAST likely to be justified for the purposes of the app.

Citizenship may not be necessary for providing health recommendations or contact tracing services. Collecting this type of personal information could raise privacy concerns if it is not necessary for fulfilling the primary purpose of the app.

### NEW QUESTION # 199

What is the main reason the Do Not Track (DNT) header is not acknowledged by more companies?

- A. It has been difficult to solve the technological challenges surrounding DNT.
- B. Most web browsers incorporate the DNT feature.
- C. There is a lack of consensus about what the DNT header should mean.
- D. The financial penalties for violating DNT guidelines are too high.

**Answer: C**
