Reliable 312-38 Test Online, New 312-38 Test Review

The prime objective of our EC-COUNCIL 312-38 PDF is to improve your knowledge and skills to the level that you get attain success easily without facing any difficulty. For this purpose, BraindumpStudy hired the services of the best industry experts for

developing exam dumps and hence you have preparatory content that is unique in style and filled with information. Each BraindumpStudy brain dump, included in the 312-38 Brain Dumps PDF is significant and may also be the part of the actual exam paper.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q628-Q633):

NEW QUESTION # 628

Which of the following is a software tool used in passive attacks for capturing network traffic?

- A. Intrusion prevention system
- B. Intrusion detection system
- C. Sniffer
- D. Warchalking

Answer: C

Explanation:

A sniffer is a software tool that is used to capture any network traffic. Since a sniffer changes the NIC of the LAN card into promiscuous mode, the NIC begins to record incoming and outgoing data traffic across the network. A sniffer attack is a passive attack because the attacker does not directly connect with the target host. This attack is most often used to grab logins and passwords from network traffic. Tools such as Ethereal, Snort, Windump, EtherPeek, Dsniff are some good examples of sniffers. These tools provide many facilities to users such as graphical user interface, traffic statistics graph, multiple sessions tracking, etc.

Answer option A is incorrect. An intrusion prevention system (IPS) is a network security device that monitors network and/or system activities for malicious or unwanted behavior and can react, in real-time, to block or prevent those activities. When an attack is detected, it can drop the offending packets while still allowing all other traffic to pass.

Answer option B is incorrect. An IDS (Intrusion Detection System) is a device or software application that monitors network and/or system activities for malicious activities or policy violations and produces reports to a Management Station. Intrusion prevention is the process of performing intrusion detection and attempting to stop detected possible incidents. Intrusion detection and prevention systems (IDPS) are primarily focused on identifying possible incidents, logging information about them, attempting to stop them, and reporting them to security administrators.

Answer option C is incorrect. Warchalking is the drawing of symbols in public places to advertise an open Wi-Fi wireless network. Having found a Wi-Fi node, the warchalker draws a special symbol on a nearby object, such as a wall, the pavement, or a lamp post. The name warchalking is derived from the cracker terms war dialing and war driving.

NEW QUESTION # 629

Peter works as a network administrator at an IT company. He wants to avoid exploitation of the cloud, particularly Azure services. Which of the following is a group of PowerShell scripts designed to help the network administrator understand how attacks happen and help them protect the cloud?

- A. SecurityPolicyDsc
- B. POSH-Sysmon
- C. MicroBurst
- D. Sysmon

Answer: C

Explanation:

MicroBurst is a collection of PowerShell scripts designed to help network administrators understand how attacks occur and to protect cloud environments, particularly Azure services. These scripts aid in detecting vulnerabilities, simulating attacks, and implementing defensive measures to secure the cloud infrastructure.

* POSH-Sysmon: A set of PowerShell scripts for managing Sysmon configurations.

* SecurityPolicyDsc: A module for managing security policies through Desired State Configuration (DSC).

* Sysmon: A Windows system service and device driver that logs system activity to the Windows event log, not specifically focused on cloud protection.

References:

* EC-Council Certified Network Defender (CND) Study Guide

* Azure security documentation and MicroBurst resources

NEW QUESTION # 630

Which of the following help in estimating and totaling up the equivalent money value of the benefits and costs to the community of projects for establishing whether they are worthwhile?

Each correct answer represents a complete solution. Choose all that apply.

- A. Benefit-Cost Analysis
- B. Business Continuity Planning
- C. Cost-benefit analysis
- D. Disaster recovery

Answer: A,C

NEW QUESTION # 631

Fred is a network technician working for Johnson Services, a temporary employment agency in Boston.

Johnson Services has three remote offices in New England and the headquarters in Boston where Fred works.

The company relies on a number of customized applications to perform daily tasks and unfortunately these applications require users to be local administrators. Because of this, Fred's supervisor wants to implement tighter security measures in other areas to compensate for the inherent risks in making those users local admins. Fred's boss wants a solution that will be placed on all computers throughout the company and monitored by Fred. This solution will gather information on all network traffic to and from the local computers without actually affecting the traffic. What type of solution does Fred's boss want to implement?

- A. Fred's boss wants Fred to monitor a NIPS system.
- B. Fred's boss wants to implement a HIDS solution.
- C. Fred's boss wants a NIDS implementation.
- D. Fred's boss wants to implement a HIPS solution.

Answer: C

Explanation:

The solution described is a Network Intrusion Detection System (NIDS). A NIDS is designed to monitor and analyze network traffic for all computers on a network without affecting the traffic flow. It gathers information on potential security threats and alerts the network administrator-in this case, Fred-without taking direct action to block the traffic. This aligns with the requirement of Fred's boss for a solution that monitors network traffic and gathers information without impacting it. Unlike a Network Intrusion Prevention System (NIPS), which actively blocks potential threats, or Host-based Intrusion Detection/Prevention Systems (HIDS/HIPS), which are installed on individual hosts, a NIDS operates at the network level to monitor traffic across all systems. References: The characteristics of a NIDS, as opposed to NIPS, HIDS, or HIPS, are well-documented in cybersecurity literature and align with the Certified Network Defender (CND) course objectives and documents.

NEW QUESTION # 632

Simon had all his systems administrators implement hardware and software firewalls to ensure network security. They implemented IDS/IPS systems throughout the network to check for and stop any unauthorized traffic that may attempt to enter. Although Simon and his administrators believed they were secure, a hacker group was able to get into the network and modify files hosted on the company's website.

After searching through the firewall and server logs, no one could find how the attackers were able to get in. He decides that the entire network needs to be monitored for critical and essential file changes. This monitoring tool alerts administrators when a critical file is altered. What tool could Simon and his administrators implement to accomplish this?

- A. Snort is the best tool for their situation
- B. They need to use Nessus
- C. They can implement Wireshark
- D. They could use Tripwire

Answer: D

NEW QUESTION # 633

.....

For EC-COUNCIL aspirants wishing to clear the EC-COUNCIL test and become a EC-Council Certified Network Defender CND certification holder, BraindumpStudy EC-COUNCIL 312-38 practice material is an excellent resource. By preparing with BraindumpStudy actual EC-COUNCIL 312-38 Exam Questions, you can take get success on first attempt and take an important step toward accelerating your career. Download updated 312-38 exam questions today and start preparation.
