

# 100% Pass Quiz High-quality VMware - 2V0-15.25 - Exam VMware Cloud Foundation 9.0 Support Simulator Fee

BTW, DOWNLOAD part of Exams4sures 2V0-15.25 dumps from Cloud Storage: <https://drive.google.com/open?id=1H4498HvuXLjE2bYo7lJ-oh2OMRbXpJ6Q>

We are quite confident that all these VMware 2V0-15.25 exam dumps feature you will not find anywhere. Just download the VMware 2V0-15.25 and start this journey right now. For the well and quick 2V0-15.25 exam dumps preparation, you can get help from VMware 2V0-15.25 which will provide you with everything that you need to learn, prepare and pass the VMware Cloud Foundation 9.0 Support (2V0-15.25) certification exam.

As is known to us, getting the newest information is very important for all people to pass the exam and get the certification in the shortest time. In order to help all customers gain the newest information about the 2V0-15.25 exam, the experts and professors from our company designed the best VMware Cloud Foundation 9.0 Support test guide. The experts will update the system every day. If there is new information about the exam, you will receive an email about the newest information about the 2V0-15.25 learning dumps. We can promise that you will never miss the important information about the exam.

## Braindumps Questions: VMware Cloud Foundation 9.0 Support

Many people would like to fall back on the most authoritative company no matter when they have any question about preparing for 2V0-15.25 exam. Our company is definitely one of the most authoritative companies in the international market for 2V0-15.25 exam. What's more, we will provide the most considerate after sale service for our customers in twenty four hours a day seven days a week, therefore, our company is really the best choice for you to buy the 2V0-15.25 Training Materials.

### VMware Cloud Foundation 9.0 Support Sample Questions (Q26-Q31):

#### NEW QUESTION # 26

An administrator wants to expand a VMware vSAN cluster in a workload domain by adding an unassigned host from the vSphere client. However, at the Host Selection screen no hosts are available and the following message displayed:

No unassigned hosts available with storage type VSAN. Commission hosts with physical NICs 0 & 1 to Add Host from UI.

How can the administrator commission hosts?

- A. From the vSphere client by navigating to Supervisor Management.
- B. From the vSphere client by navigating to the Global Inventory.
- **C. From the SDDC manager by navigating to Workload Domains.**
- D. From VCF Operations by navigating to Fleet Management.

**Answer: C**

Explanation:

In VMware Cloud Foundation 9.0, host commissioning is performed exclusively through SDDC Manager, not from the vSphere Client. When expanding a vSAN cluster inside a workload domain, all ESXi hosts must first be placed in an Unassigned state and then commissioned in SDDC Manager before they can appear in the "Add Host" wizard of the vSphere Client. The message in the problem - "No unassigned hosts available with storage type VSAN. Commission hosts with physical NICs 0 & 1 to Add Host from UI" - indicates that SDDC Manager has not yet commissioned any suitable hosts with the required NIC layout.

VCF 9.0 documentation states that for workload domain expansion, hosts must be commissioned under:

SDDC Manager # Workload Domains # (Select WLD) # Hosts # Commission Hosts.

This validates hardware, storage type (such as vSAN ESA or OSA), NIC placement, and ensures the host is compatible with the domain's configuration.

Options pointing to vSphere Client (A, D) or VCF Operations (B) do not perform the commissioning workflow. Therefore, the correct and verified answer is C, the only interface where host commissioning is officially supported.

#### NEW QUESTION # 27

An administrator is managing a VMware Cloud Foundation (VCF) environment. They receive a request from the developers to enable vDefend - Distributed Firewall. However, they noticed it cannot be enabled due to a missing license.

Where must the new license be applied?

- A. VCF Operations.
- B. SDDC Manager.
- **C. NSX Manager.**
- D. VCF Automation.

**Answer: C**

Explanation:

vDefend - Distributed Firewall is a security capability delivered by NSX within VMware Cloud Foundation.

Although VCF components such as SDDC Manager, VCF Operations, and VCF Automation rely on licensing frameworks, the enforcement and activation of NSX features - including Distributed Firewall - occur entirely within NSX Manager.

To enable vDefend (Distributed Firewall), NSX Manager must detect a valid NSX license that includes security features. Without applying the correct license directly to NSX Manager:

\* The Distributed Firewall feature remains locked

\* vDefend cannot be enabled in workload domains

\* Security rules and micro-segmentation capability remain unavailable

VCF does not apply NSX security licensing at the SDDC Manager, VCF Automation, or VCF Operations layers. Instead, NSX Manager handles all feature entitlement checks internally.

Therefore, the new license must be installed directly in NSX Manager, under:

System # Licensing # NSX # Add License

Options A, C, and D are incorrect because none of those components control NSX feature activation.

### NEW QUESTION # 28

An administrator logs into the VMware NSX Manager UI and discovers a time sync issue that has been reported in the VMware Cloud Foundation (VCF) installer.

The administrator performs the following steps:

1. Validates that the NTP server IP addresses are present in the NTP configuration on the VCF Installer.
2. Validates that the DNS records are correctly set for the FQDN and IP address of the two NTP servers.
3. Validates that the NTP servers can be pinged by name and IP address from the VCF Installer.
4. Validates that the time between the NTP servers and the VCF Installer is synchronized successfully.

What additional step should the administrator perform to help identify the cause of the error?

- A. Confirm that the NTP service has an allowed rule in the iptables on the VCF Installer.
- B. Confirm that the ESX hosts have been configured to use host time synchronization.
- **C. Confirm that the time on the ESX hosts allocated for the management domain is synchronized with the same NTP servers as the VCF Installer.**
- D. Confirm that the NTP server details have been specified in the deployment parameter workbook using the required FQDN format.

**Answer: C**

Explanation:

During VMware Cloud Foundation bring-up, time synchronization across all management components is mandatory. The VCF Installer, ESXi hosts, NSX Manager nodes, and vCenter must all sync to the same NTP servers. If even one host or component has a time skew exceeding VMware's allowed limits, VCF will report time sync errors during bring-up or post-deployment.

The administrator validated NTP configuration, DNS resolution, ping connectivity, and time sync only on the VCF Installer appliance, but did not verify the ESXi hosts' time synchronization. NSX Manager obtains its time reference from the underlying ESXi host during deployment, so if the ESXi hosts are not synchronized with the same NTP sources, NSX Manager will drift, triggering the exact error described.

Option B (iptables) does not apply—the VCF Installer does not block outbound NTP by default.

Option C refers to workbook formatting, which would fail earlier in deployment—not after NSX Manager is running.

Option A is incorrect because ESXi should never use "host time sync"; NTP must be used.

### NEW QUESTION # 29

An administrator has received reports of high CPU ready times on several Virtual Machines (VMs) running within a VMware Cloud Foundation (VCF) with error "com.vmware.esx.settings\_daemon.software.scan\_spec".

What is the cause of this error?

- A. A vendor add-on was not provided in the image.
- B. The cluster was not assigned a default image.
- C. A device driver is incompatible with the included firmware.
- **D. A component was removed from the image.**

**Answer: D**

Explanation:

The error message `com.vmware.esx.settings.daemon.software.scan_spec` (reconstructed from the typo `setungs_aemon.software.scan_spec`) is a specific failure generated by the vSphere Lifecycle Manager (vLCM) compliance engine on the ESXi host.

\* Cause - Removed Component: This error is a documented known issue in vSphere 8.x/VCF 5.x+, specifically occurring when an administrator has removed a component from the Cluster Image that the system validates as "required" or "structural" for the host's hardware configuration (common with hosts using DPUs or specific OEM add-ons).

\* The Scenario: The mention of "High CPU ready times" likely implies the administrator attempted to streamline the host image by removing a perceived "bloatware" component (like a vendor monitoring agent or unused driver) to improve performance.

\* The Result: When vLCM attempts to build the "Scan Specification" (`scan_spec`) to validate the host against this modified image, the internal struct validation fails because the removed component creates an invalid dependency state, throwing the `Invalid field software_spec... or scan_spec exception`.

### NEW QUESTION # 30

In VMware Cloud Foundation (VCF) Automation an administrator is troubleshooting an issue with a newly created Organization. When the Organization administrator attempts to create a Namespace, they receive an error "Failed to list VPC after selecting a region.

The administrator logs into the NSX Manager for the Region and does not see an NSX Project for the Organization. What could cause these symptoms?

- A. The Provider Administrator hasn't set up the Organization's Networking Configuration for the selected Region.
- B. The Provider Administrator hasn't granted the Organization Administrator role to the First User.
- C. The Organization Administrator hasn't created a VPC in the selected Region.
- D. The Organization Administrator hasn't created a Project in the selected Region.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0 Automation, every Organization requires a properly configured Networking Configuration for each Region in which it operates. This configuration step-performed by the Provider Administrator-creates the NSX Project corresponding to the Organization, enabling Namespace creation, VPC visibility, and workload provisioning.

The error "Failed to list VPC after selecting a region" combined with the absence of an NSX Project in NSX Manager is a direct indicator that the Organization's Networking Configuration was never initialized. VCF Automation automatically creates the NSX Project only when the Provider Admin completes this step.

Option B is invalid because the Organization Administrator cannot create NSX Projects manually; they are system-generated during networking setup.

Option C is incorrect because role assignment affects administrative permissions, not NSX project creation.

Option D is also incorrect-the Organization Admin cannot create a VPC until the NSX Project exists.

### NEW QUESTION # 31

.....

The Exams4sures 2V0-15.25 Practice Questions are designed and verified by experienced and renowned 2V0-15.25 exam trainers. They work collectively and strive hard to ensure the top quality of 2V0-15.25 exam practice questions all the time. The 2V0-15.25 Exam Questions are real, updated, and error-free that helps you in VMware 2V0-15.25 exam preparation and boost your confidence to crack the upcoming 2V0-15.25 exam easily.

**New 2V0-15.25 Braindumps Questions:** <https://www.exams4sures.com/VMware/2V0-15.25-practice-exam-dumps.html>

There is why our VMware 2V0-15.25 learning prep exam is well received by the general public, You know what the high hit rate means, it equals to the promise of VMware New 2V0-15.25 Braindumps Questions certification, As they always said that our 2V0-15.25 learning quiz is guaranteed to help them pass the exam, Our 2V0-15.25 practice engine is the most popular examination question bank for candidates.

The most polished and popular arcade games, though, 2V0-15.25 do try to compel you to spend money, Podcasting is interesting to us here at SmallBusiness Labs because it s yet another example 2V0-15.25 Test Vce of small businesses and even individuals successfully competing with large corporations.

## 100% Pass High-quality VMware - Exam 2V0-15.25 Simulator Fee

There is why our VMware 2V0-15.25 learning prep exam is well received by the general public, You know what the high hit rate means, it equals to the promise of VMware certification.

As they always said that our 2V0-15.25 learning quiz is guaranteed to help them pass the exam, Our 2V0-15.25 practice engine is the most popular examination question bank for candidates.

So the clients can enjoy more benefits after they buy our 2V0-15.25 study materials.
