Valid Google Professional-Cloud-Database-Engineer Study Plan | New Professional-Cloud-Database-Engineer Study Plan

The Google Professional-Cloud-Database-Engineer pdf questions learning material provided to the customers from BraindumpsIT is in three different formats. The first format is PDF format which is printable and portable. It means it can be accessed from tablets, laptops, and smartphones to prepare for the Google Cloud Certified - Professional Cloud Database Engineer exam. The Google Professional-Cloud-Database-Engineer Pdf Format can be used offline, and candidates can even prepare for it in the classroom or library by printing questions or on their smart devices.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q52-Q57):

NEW QUESTION # 52

Your company is migrating the existing infrastructure for a highly transactional application to Google Cloud. You have several databases in a MySQL database instance and need to decide how to transfer the data to Cloud SQL. You need to minimize the downtime for the migration of your 500 GB instance. What should you do?

- A. Use the mysqldump utility to manually initiate a backup of MySQL during the application maintenance window. Move the files to Cloud Storage, and import each database into your Cloud SQL instance. Continue to dump each database until all the databases are migrated. Update your application connections to the new instance.

- **B. Create migration job using Database Migration Service.**
Set the migration job type to Continuous, and allow the databases to complete the full dump phase and start sending data in change data capture (CDC) mode.
Wait for the replication delay to minimize, initiate a promotion of the new Cloud SQL instance, and wait for the migration job to complete.
Update your application connections to the new instance.
- C. Create migration job using Database Migration Service.
Set the migration job type to One-time, and perform this migration during a maintenance window.
Stop all write workloads to the source database and initiate the dump. Wait for the dump to be loaded into the Cloud SQL destination database and the destination database to be promoted to the primary database.
Update your application connections to the new instance.
- D. Create a Cloud SQL for MySQL instance for your databases, and configure Datastream to stream your database changes to Cloud SQL.
Select the Backfill historical data check box on your stream configuration to initiate Datastream to backfill any data that is out of sync between the source and destination.
Delete your stream when all changes are moved to Cloud SQL for MySQL, and update your application to use the new instance.

Answer: B

Explanation:

<https://cloud.google.com/datastream/docs/overview>.

NEW QUESTION # 53

Your organization is running a Firestore-backed Firebase app that serves the same top ten news stories on a daily basis to a large global audience. You want to optimize content delivery while decreasing cost and latency. What should you do?

- **A. Build a Firestore bundle, and deploy bundles to Cloud CDN.**
- B. Deploy a US multi-region Firestore location.
- C. Create a Firestore index on the news story date.
- D. Enable serializable isolation in the Firebase app.

Answer: A

Explanation:

A global audience strongly suggests serving content via Google's Content Delivery Network. Changing the isolation level won't decrease cost or latency

NEW QUESTION # 54

Your organization has a ticketing system that needs an online marketing analytics and reporting application.

You need to select a relational database that can manage hundreds of terabytes of data to support this new application. Which database should you use?

- A. Cloud SQL
- B. Cloud Spanner
- C. Bigtable
- **D. BigQuery**

Answer: D

NEW QUESTION # 55

You have a large Cloud SQL for PostgreSQL instance. The database instance is not mission-critical, and you want to minimize operational costs. What should you do to lower the cost of backups in this environment?

- A. Select a different region to store your backups.
- B. Set the automated backups to occur every other day to lower the frequency of backups.
- **C. Reduce the number of automated backups that are retained to two (2).**
- D. Change the storage tier of the automated backups from solid-state drive (SSD) to hard disk drive (HDD).

Answer: C

Explanation:

By default, for each instance, Cloud SQL retains seven automated backups, in addition to on-demand backups. You can configure how many automated backups to retain (from 1 to 365). We charge a lower rate for backup storage than for other types of instances. <https://cloud.google.com/sql/docs/mysql/backup-recovery/backups>

NEW QUESTION # 56

You are building an application that allows users to customize their website and mobile experiences. The application will capture user information and preferences. User profiles have a dynamic schema, and users can add or delete information from their profile. You need to ensure that user changes automatically trigger updates to your downstream BigQuery data warehouse. What should you do?

- **A. Use Firestore in Native mode, and store user profile data as a document. Update the user profile with preferences specific to that user and use the user identifier to query.**
- B. Use Firestore in Datastore mode, and store user profile data as a document. Update the user profile with preferences specific to that user and use the user identifier to query.
- C. Store your data in Bigtable, and use the user identifier as the key. Use one column family to store user profile data, and use another column family to store user preferences.
- D. Use Cloud SQL, and create different tables for user profile data and user preferences from your recommendations model. Use SQL to join the user profile data and preferences

Answer: A

Explanation:

Use Firestore in Datastore mode for new server projects. Firestore in Datastore mode allows you to use established Datastore server architectures while removing fundamental Datastore limitations. Datastore mode can automatically scale to millions of writes per second. Use Firestore in Native mode for new mobile and web apps. Firestore offers mobile and web client libraries with real-time and offline features. Native mode can automatically scale to millions of concurrent clients.

NEW QUESTION # 57

.....

Please believe that our company is very professional in the research field of the Professional-Cloud-Database-Engineer study materials, which can be illustrated by the high passing rate of the examination. Despite being excellent in other areas, we have always believed that quality and efficiency should be the first of our Professional-Cloud-Database-Engineer study materials. For study materials, the passing rate is the best test for quality and efficiency. There may be some other study materials with higher profile and lower price than our products, but we can assure you that the passing rate of our Professional-Cloud-Database-Engineer Study Materials is much higher than theirs.
