Free PDF 2026 UiPath-ADAv1: Professional Latest UiPath Automation Developer Associate v1 Exam Training

The software version of the UiPath-ADAv1 exam reference guide is very practical. This version has helped a lot of customers pass their exam successfully in a short time. The most important function of the software version is to help all customers simulate the real examination environment. If you choose the software version of the UiPath-ADAv1 Test Dump from our company as your study tool, you can have the right to feel the real examination environment. In addition, the software version is not limited to the number of the computer. So hurry to buy the UiPath-ADAv1 study question from our company.

UiPath Automation Developer Associate v1 Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

What user category is the UiPath StudioX profile best suited for, as opposed to the UiPath Studio profile?

- A. Project managers looking to guide project teams through automations.
- B. Developers looking to build complex unattended or attended process automations.
- **C. Business users looking to automate tasks for themselves and their immediate teams.**
- D. Business analysts looking to document the processes for automation.

Answer: C

Explanation:

UiPath StudioX is specifically designed for business users who do not have programming expertise but want to automate repetitive tasks.

Why is B Correct?

StudioX is ideal for:

- * Business users with minimal coding experience.
- * Citizen developers who need simple, no-code automation.
- * Automating personal and team tasks (e.g., data entry, email automation, report generation).

NEW QUESTION # 27

A developer has declared a variable of type String named StrVar and assigned it the value "UIPATH STUDIO". What is the output of the expression, StrVar.IndexOf("U")?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Explanation

The IndexOf method of String values returns the index of the first occurrence of a specified character or substring in a given string. The index is zero-based, meaning that the first character has the index 0, the second character has the index 1, and so on. If the

character or substring is not found, the method returns -1. In this case, the expression `StrVar.IndexOf("U")` returns the index of the first occurrence of the character "U" in the string "UIPATH STUDIO", which is 0. Therefore, the answer is A. 0. References: `String.IndexOfMethod`, `String Variables`

NEW QUESTION # 28

A developer has created an automation that utilizes an Asset value from Orchestrator with the Get Asset activity. This value represents the email addresses of the process owners, which are subject to change.

What Asset type is most suitable for this situation?

- A. Integer
- B. Bool
- C. Text
- D. Credential

Answer: C

Explanation:

The Get Asset activity retrieves stored values from Orchestrator Assets. Since email addresses are text-based values, the most appropriate Asset type is Text.

Why is C Correct?

Text Asset is suitable for:

- * Storing strings such as email addresses, URLs, file paths, or API keys.
- * Easily updated in Orchestrator without modifying the automation.
- * Supports dynamic values that may change over time.

NEW QUESTION # 29

A developer needs to prioritize automating several processes. To help prevent any long-term maintenance, which process attribute should be avoided?

- A. High volume work
- B. Repetitive business process
- C. Logical decision points
- D. Frequent application changes

Answer: D

Explanation:

Explanation

Frequent application changes are a process attribute that should be avoided when prioritizing automating several processes. This is because frequent application changes can cause the automation to break or malfunction, and require constant maintenance and updates. Processes that are stable and consistent are more suitable for automation, as they reduce the risk of errors and rework. References: `Process Selection Criteria` and `Process Analysis` from UiPath documentation.

NEW QUESTION # 30

A developer is working on a project that uses Git for source control. A fellow team member seeks to compare two versions of a specific workflow within the project. Which option in UiPath Studio offers this functionality?

- A. Checkout Branch
- B. Show History
- C. Push
- D. Pull (Rebase)

Answer: B

Explanation:

The "Show History" option in UiPath Studio displays version history for workflows managed in Git.

- * It allows developers to compare different versions of a file.
- * Differences in activities, arguments, and variables are highlighted, helping in code reviews and debugging.
