Exam Dumps NCP-MCA Free & NCP-MCA Valid Study Guide

After you practice our study materials, you can master the examination point from the NCP-MCA exam torrent. Then, you will have enough confidence to pass your exam. We can succeed so long as we make efforts for one thing. As for the safe environment and effective product, why don't you have a try for our NCP-MCA Test Question, never let you down! Before your purchase, there is a free demo for you. You can know the quality of our NCP-MCA guide question earlier.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q45-Q50):

NEW QUESTION # 45

An administrator has been manually performing routine tasks on a set interval that are listed below:

1. Acknowledging Alerts
2. Generating Reports
3. Looking up cluster details

As the environment grows, these tasks will become cumbersome to run and maintain accuracy.

Which trigger type should the administrator implement in order for these actions to occur on a set interval.

- A. Manual Trigger
- **B. Time Trigger**
- C. Event Trigger
- D. Webhook trigger

Answer: B

Explanation:

To automate routine tasks such as acknowledging alerts, generating reports, and looking up cluster details on a set interval, the administrator should implement a Time Trigger. Time Triggers allow actions to be scheduled to run at specific times or intervals, ensuring consistent execution without manual intervention.

Reference:

Nutanix Calm documentation on Triggers.

Nutanix Best Practices for Automating Routine Tasks.

NEW QUESTION # 46

While creating a Runbook, which type should an administrator select to performed a REST API call?

- A. Execute
- B. Decision
- **C. HTTP**
- D. While Loop

Answer: C

Explanation:

When creating a Runbook in Nutanix Calm to perform a REST API call, the administrator should select the "HTTP" task type. This task type is specifically designed to make HTTP requests, including REST API calls, allowing integration with external services and APIs.

References:

* Nutanix Calm documentation on Runbook Task Types.

* Nutanix Best Practices for HTTP Task in Runbooks.

NEW QUESTION # 47

An administrator notices a Blueprint fails with the following error for Windows machines:

script execution has failed with error Process creation failed with error:1314 What is causing this issue?

- A. The Windows machine is in hung state.
- B. The firewall ports 5985 and 5986 are blocked.
- **C. The credentials provided in the Calm Blueprint does not have sufficient privileges.**
- D. The Service is running with incorrect privileges to create a process.

Answer: C

Explanation:

The error code 1314 indicates that the user does not have the required privilege to perform the requested operation. This means that the credentials provided in the Calm Blueprint are not valid or do not have enough permissions to run the script on the Windows machine. To fix this issue, the administrator should verify the credentials and ensure that they have the appropriate rights to execute the script, such as local administrator or domain administrator privileges. NEW QUESTION # 48

Why is an administrator unable to update the running configuration for a multi-VM application in AWS using the Manage tab for the application in Calm?

- A. It is supported only on a Nutanix platform.
- B. The AWS account used is invalid.
- **C. The provider information is missing.**
- D. A required Category is not assigned.

Answer: C

Explanation:

To update the running configuration for a multi-VM application in AWS using the Manage tab for the application in Calm, the administrator needs to provide the provider information for the AWS account. This includes the access key, secret key, region, and VPC ID. If the provider information is missing, the administrator will not be able to perform any actions on the application from Calm. Reference: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 16, section 4.1.1.

NEW QUESTION # 49

An administrator is configuring Self-Service and would like to create fundamental building blocks that help automate various processes within blueprints and runbooks.

Where would the administrator create these automation building blocks?

- **A. Library**
- B. VAML
- C. Projects
- D. Tasks

Answer: A

Explanation:

The Library (specifically the Task Library) is the designated repository in Nutanix Self-Service for creating and managing reusable automation building blocks.

* Task Library: This feature allows administrators to define discrete tasks (such as Shell scripts, PowerShell scripts, HTTP requests, or Python scripts) once and store them centrally.

* Reusability: These tasks serve as fundamental "building blocks" because they can be imported into multiple Blueprints and Runbooks across different Projects.

* Differentiation:

* Tasks (Option C): While "Tasks" are the actual units of work, the question asks where they are created for the purpose of establishing them as foundational, reusable blocks. They are created in the Library.

* Projects (Option B): Projects are logical containers for users, quotas, and environments, not the repository for reusable script definitions.

Thus, the Library is the correct location for creating shared automation assets.

NEW QUESTION # 50

.....

Before you try to attend the NCP-MCA practice exam, you need to look for best learning materials to easily understand the key points of NCP-MCA exam prep. There are NCP-MCA real questions available for our candidates with accurate answers and detailed explanations. We are ready to show you the most reliable NCP-MCA PDF VCE and the current exam information for your preparation of the test.
