Salesforce Certified Data Architect certification validates the skills required to design, implement, and maintain complex data solutions on the Salesforce platform. The Salesforce Certified Data Architect certification is a valuable asset for professionals who want to stand out in the competitive Salesforce job market.

Salesforce Certified Data Architect Sample Questions (Q254-Q259):

NEW QUESTION # 254

Universal Container (UC) has around 200,000 Customers (stored in Account object). They get 1 or 2 Orders every month from each Customer. Orders are stored in a custom object called "Order c"; this has about 50 fields. UC is expecting a growth of 10% year-over-year. What are two considerations an architect should consider to improve the performance of SOQL queries that retrieve data from the Order__c object? Choose 2 answers

- A. Reduce the number of triggers on Order__c object.
- B. Make the queries more selective using indexed fields.
- C. Work with Salesforce Support to enable Skinny Tables.
- D. Use SOQL queries without WHERE conditions.

Answer: B,C

NEW QUESTION # 255

A national nonprofit organization is using Salesforce to recruit members. The recruitment process requires a member to be matched with a volunteer opportunity. Given the following:

1. A record is created in Project__c and used to track the project through completion.
2. The member may then start volunteering and is required to track their volunteer hours, which is stored in VTOTime__c object related to the project.
3. Ability to view or edit the VTOTime__c object needs to be the same as the Project__c record.
4. Managers must see total hours volunteered while viewing the Project__c record.

Which data relationship should the data architect use to support this requirement when creating the custom VTOTime__c object?

- A. Master Detail field on Project__c to VTOTime__c showing a list of VTOTime__c Records in a related list.
- B. Master Detail Field on VTOTime__c to Project__c with rollup summary field on Project__c showing sum of hours from VTOTime__c records.
- C. Lookup field on VTOTime__c to Project__c with formula field on Project__c showing Sum of hours from VTOTime__c records.
- D. Lookup Field on Project__c to VTOTime__c displaying a list of VTOTime__c in a related list.

Answer: B

NEW QUESTION # 256

What should a data architect do to provide additional guidance for users when they enter information in a standard field?

- A. Add a label field with help text adjacent to the custom field.
- B. Create a custom page with help text for user guidance.
- C. Add custom help text in default value for the field.
- D. Provide custom help text under field properties.

Answer: D

NEW QUESTION # 257

Northern Trail Outfitters would like to report on the type of customers. A custom field for customer type was created in Account object. Users need to be limited to the following defined choices when entering information in this field:

1. High Value
2. Medium Value
3. Low Value

Which strategy should a data architect recommend to configure customer type?

- A. Single-select restricted picklist with defined choices.
- B. Lookup to a custom object with defined choices.
- C. Create a validation rule to limit entry to defined choices.
- D. Provide help text to guide users with defined choices.

Answer: A

Explanation:

single-select restricted picklist with defined choices can be a way to configure customer type. The article states that picklists are

fields that allow users to select one or more predefined values from a list, and restricted picklists ensure that users can only select from the defined values. This can help to limit the choices for customer type and ensure data quality.

NEW QUESTION # 258

Which API should a data architect use if exporting 1 million records from Salesforce?

- A. Streaming API
- **B. Bulk API**
- C. REST API
- D. SOAP API

Answer: B

Explanation:

Using Bulk API to export 1 million records from Salesforce is the best option. Bulk API is a RESTful API that allows you to perform asynchronous operations on large sets of data. You can use Bulk API to create, update, delete, or query millions of records in batches. Bulk API is optimized for performance and scalability, and it can handle complex data loading scenarios.
