WGU D320 - Managing Cloud Security (2024) Questions With Complete Solutions.

Which phase of the cloud data life cycle requires adherence to export and import restrictions, including Export Administration Regulations (EAR) and the Wassenaar Arrangement?

A) Create
B) Share
C) Use
D) Destroy Answer- B

Why is the striping method of storing data used in most redundant array of independent disks (RAID) configurations?

A) It prevents outages and attacks from occurring in a cloud environment.
B) It prevents data from being recovered once it is destroyed using crypto-shredding.
C) It allows data to be safely distributed and stored in a common centralized location.
D) It allows efficient data recovery as even if one drive fails, other drives fill in the missing data. Answer- D

What is the purpose of egress monitoring tools?

A) They are used to convert a given set of data or information into a different value.
B) They are used to prevent data from going outside the control of an organization.
C) They are used to create data during the Create phase of the cloud data life cycle.
D) They are used to remove data during the Destroy phase of the cloud data life cycle. Answer- B

A company is looking at different types of cloud storage options. One of the threats to cloud storage that the company foresees is the possibility of losing forensic artifacts in the event of an incident response investigation.

Which type of cloud storage has the highest risk of losing forensic artifacts in the event of an incident response investigation?

A) File-based
B) Long-term

Under the hatchet of fast-paced development, we must always be cognizant of social long term goals and the direction of the development of science and technology. Adapt to the network society, otherwise, we will take the risk of being obsoleted. Our WGU Managing Cloud Security (JY02) qualification test help improve your technical skills and more importantly, helping you build up confidence to fight for a bright future in tough working environment. Our professional experts devote plenty of time and energy to developing the Managing-Cloud-Security Study Tool. You can trust us and let us be your honest cooperator in your future development. Here are several advantages about our WGU Managing Cloud Security (JY02) exam for your reference. We sincere suggest you to spare some time to have a glance over the following items.

DumpsValid has come up with the latest and real WGU Managing-Cloud-Security Exam Dumps that can solve these drastic problems for you. We guarantee that these questions will be enough for you to clear the WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) examination on the first attempt. Doubtlessly, cracking the Managing-Cloud-Security test of the Managing-Cloud-Security credential is one tough task but this task can be made easier if you prepare with Managing-Cloud-Security practice questions of DumpsValid. Keeping in view different preparation styles of WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) test applicant DumpsValid has designed three easy-to-use formats for its product.

Exam Managing-Cloud-Security Quizzes | Managing-Cloud-Security Latest Exam Dumps

Owing to the industrious dedication of our experts and other working staff, our Managing-Cloud-Security study materials grow to be more mature and are able to fight against any difficulties. Our Managing-Cloud-Security preparation exam have achieved high pass rate in the industry, and we always maintain a 99% pass rate with our endless efforts. We have to admit that behind such a starling figure, there embrace mass investments from our company on our Managing-Cloud-Security learning quiz. But it is all worth that as the high pass rate can make sure our customers pass the exam by the best percentage.

WGU Managing Cloud Security (JY02) Sample Questions (Q86-Q91):

NEW QUESTION # 86
An organization is evaluating which cloud computing service model it should implement. It is considering either platform as a service (PaaS) or software as a service (SaaS). Which risk associated with SaaS can the organization avoid by choosing PaaS?

- A. Vendor lock-in
- B. Natural disaster
- C. Personnel threat
- D. Vendor lock-out

Answer: A

Explanation:
With SaaS, applications are delivered entirely by the provider, and customers have little to no control over the underlying platform or data portability. This creates a higher risk of vendor lock-in, as migrating away from one SaaS provider to another may require reworking applications or losing features.
In contrast, PaaS gives customers more flexibility by allowing them to build, deploy, and manage their own applications while relying on standardized frameworks and platforms. Because applications are customer-managed, switching providers or migrating workloads can be easier compared to SaaS.
Vendor lock-out, personnel threats, and natural disasters are risks in any service model. The key differentiator here is portability and flexibility. Choosing PaaS reduces dependence on a single provider's application features, thereby lowering vendor lock-in risk while still offloading infrastructure management.

NEW QUESTION # 87
Which testing standard is currently used to guide Service Organization Control (SOC) audits outside the United States?

- A. The Statement on Standards for Accounting and Review Services (SSARS) 25
- B. The International Standard on Assurance Engagements (ISAE) 3402
- C. The Statement on Standards for Attestation Engagements (SSAE) 18
- D. The International Standard on Review Engagements (ISRE) 2400

Answer: B

Explanation:
Outside the United States, ISAE 3402 (International Standard on Assurance Engagements 3402) is the standard used for audits equivalent to SOC reports. It ensures that service organizations demonstrate adequate internal controls over financial reporting and operational processes.
SSAE 18 is the U.S. standard governing SOC audits. ISRE 2400 and SSARS 25 focus on accounting and review services, not assurance over service organizations.
ISAE 3402 provides assurance to international customers that cloud providers or service organizations meet rigorous standards for security, availability, processing integrity, confidentiality, and privacy. This builds global trust and interoperability in compliance frameworks.

NEW QUESTION # 88
A customer requests that a cloud provider physically destroys any drives storing their personal data. What must the provider do with the drives?

- A. It should destroy them only if dedicated hardware disposal is specified in the contract.

- B. It should use degaussing tools to securely remove any personal data from the drives.
- C. It should use cryptographic erasure to securely remove any personal data from the drives.
- D. It should destroy them only if the contract includes hardware disposal insurance.

Answer: A

Explanation:

Cloud providers typically manage multi-tenant infrastructure, where physical hardware is shared among customers. Therefore, drives are not destroyed for each customer unless explicitly required in the contract. If the customer's agreement specifies dedicated hardware disposal, then the provider must comply by physically destroying the drives.

Cryptographic erasure and degaussing are valid sanitization methods, but they may not meet the specific contractual requirement of physical destruction. Insurance clauses are unrelated to disposal.

This question underscores the importance of negotiating contractual terms in cloud agreements. Customers handling highly sensitive or regulated data may require physical destruction, while others may accept logical erasure. Clear agreements ensure both compliance and alignment of security responsibilities.

NEW QUESTION # 89

An organization's leadership team gathered managers and key team members in each division to help create a disaster recovery plan. They realize they lack a complete understanding of the infrastructure and software needed to formulate the plan. Which action should they take to correct this issue?

- A. They should determine the criteria of a disaster.
- B. They should create a checklist of the necessary tasks.
- C. They should identify the key roles in a disaster.
- D. They should perform an inventory of assets.

Answer: D

Explanation:

Without a clear understanding of infrastructure and software, the leadership team must first conduct an inventory of assets. An asset inventory provides a comprehensive list of hardware, software, and services that support business operations.

Creating checklists, defining criteria, and assigning roles are important, but they rely on knowing what assets exist. Without an inventory, the disaster recovery plan would miss critical dependencies, making recovery incomplete or impossible.

Performing an inventory supports business impact analysis, risk assessments, and recovery prioritization. It ensures that all critical systems are accounted for and appropriate recovery strategies can be designed. Asset inventories are a foundational best practice for disaster recovery and continuity planning.

NEW QUESTION # 90

Which type of cloud security vulnerability is static application security testing (SAST) likely to find?

- A. Embedded credentials
- B. Hypervisor vulnerabilities
- C. Run-time vulnerabilities
- D. Software misconfiguration

Answer: A

Explanation:

Static application security testing (SAST) is most likely to identify embedded credentials. Managing Cloud principles explain that SAST analyzes application source code, binaries, or bytecode without executing the program.

Because SAST inspects code structure and logic, it can detect hard-coded passwords, API keys, and secrets embedded directly in application files. These vulnerabilities pose significant risk if exposed in cloud environments.

Software misconfiguration and runtime vulnerabilities require execution context, and hypervisor vulnerabilities exist outside application code. Therefore, embedded credentials are best detected through SAST.

NEW QUESTION # 91

......

The web-based WGU Managing-Cloud-Security practice test software can be used through browsers like Firefox, Safari, and Google Chrome. The customers don't need to download or install any excessive plugins or software in order to use the web-based WGU Managing-Cloud-Security Practice Exam format. The web-based Managing-Cloud-Security practice test software format is supported by different operating systems like Mac, iOS, Linux, Windows, and Android.

Exam Managing-Cloud-Security Quizzes: https://www.dumpsvalid.com/Managing-Cloud-Security-still-valid-exam.html

WGU New Managing-Cloud-Security Exam Pattern And it has most related question & answers with totally hit rate, Do you want to prepare for the exam with the best study materials such as our Managing-Cloud-Security test preparation: WGU Managing Cloud Security (JY02), The WGU Managing Cloud Security (JY02) dumps are most relevant to your needs and offer you a readymade solution in the form of Managing-Cloud-Security questions and answers to pass Managing-Cloud-Security exam, Managing-Cloud-Security actual exam look forward to be your best partner.

She makes it easy to take the first steps and to develop your creative potential Managing-Cloud-Security with clear explanations, efficient tools and fun exercises, relying on multiple solid sources and on her vast experience in the corporate world.

WGU Managing-Cloud-Security Exam | New Managing-Cloud-Security Exam Pattern - Ensure you a High Passing Rate of Managing-Cloud-Security Exam

Provides clear, in-depth explanations and demos, And it has most related question & answers with totally hit rate, Do you want to prepare for the exam with the best study materials such as our Managing-Cloud-Security Test Preparation: WGU Managing Cloud Security (JY02)?

The WGU Managing Cloud Security (JY02) dumps are most relevant to your needs and offer you a readymade solution in the form of Managing-Cloud-Security questions and answers to pass Managing-Cloud-Security exam, Managing-Cloud-Security actual exam look forward to be your best partner.

Besides, our staff treasures all your constructive Exam Managing-Cloud-Security Quizzes opinions and recommends, we can be better our services in all respects.
