Our accurate, reliable, and top-ranked Nutanix NCP-US-6.5 exam questions will help you qualify for your Nutanix NCP-US-6.5 certification on the first try. Do not hesitate and check out excellent Nutanix NCP-US-6.5 Practice Exam to stand out from the rest of the others.

## Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Troubleshoot issues related to Nutanix Files</li><li>• Explain Data Management processes for Files and Objects</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Given a scenario, configure shares, buckets, and</li><li>• or Volume Groups</li><li>• Troubleshoot a failed upgrade for Files</li><li>• Objects</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Configure Nutanix Files with advanced features</li><li>• Determine the appropriate method to ensure data availability</li><li>• recoverability</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>Configure Nutanix Objects</li> <li>Describe how to monitor performance and usage</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Troubleshoot issues related to Nutanix Objects</li> <li>Troubleshoot issues related to Nutanix Volumes</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Deploy and Upgrade Nutanix Unified Storage</li> <li>Perform upgrades</li> <li>maintenance for Files</li> <li>Objects implementations</li> </ul>

## Online Nutanix NCP-US-6.5 Web-based Practice Test

One of the advantages of the NCP-US-6.5 training test is that we are able to provide users with free pre-sale experience, the NCP-US-6.5 study materials pages provide sample questions module, is mainly to let customers know our part of the subject, before buying it, users further use our NCP-US-6.5 Exam Prep. At the same time, it is more convenient that the sample users we provide can be downloaded PDF demo for free, so the pre-sale experience is unique. So that you will know how efficiency our NCP-US-6.5 learning materials are and determine to choose without any doubt.

### Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q78-Q83):

#### NEW QUESTION # 78

How many configurable snapshots are supported for SSR in a file server?

- A. 0
- B. 1
- C. 2**
- D. 3

#### Answer: C

Explanation:

The number of configurable snapshots that are supported for SSR in a file server is 200. SSR (Snapshot-based Replication) is a feature that allows administrators to replicate snapshots of shares or exports from one file server to another file server on a different cluster or site for disaster recovery purposes. SSR can be configured with various parameters, such as replication frequency, replication status, replication mode, etc. SSR supports up to 200 configurable snapshots per share or export in a file server.

Reference: Nutanix Files Administration Guide, page 81; Nutanix Files Solution Guide, page 9

#### NEW QUESTION # 79

An administrator needs to improve the performance for Volume Group storage connected to a group of VMs with intensive I/O. Which `vg.update vg_name` command parameter should be used to distribute the I/O across multiple CVMs?

- A. `flash_mode=true`
- B. `load_balance_vm_attachments=true`**
- C. `load_balance_vm_attachments=enable`
- D. `flash_mode=enable`

#### Answer: B

Explanation:

Nutanix Volumes, part of Nutanix Unified Storage (NUS), provides block storage via iSCSI to VMs and external hosts. A Volume Group (VG) in Nutanix Volumes is a collection of volumes that can be attached to VMs. For VMs with intensive I/O, performance can be improved by distributing the I/O load across multiple Controller VMs (CVMs) in the Nutanix cluster. The `vg.update`

command in the Nutanix CLI (e.g., `ncli`) is used to modify Volume Group settings, including parameters that affect I/O distribution. Analysis of Options:

\* Option A (`flash_mode=enable`): Incorrect. The `flash_mode` parameter enables flash mode for a Volume Group, which prioritizes SSDs for I/O operations to improve performance. While this can help with intensive I/O, it does not distribute I/O across multiple CVMs—it focuses on storage tiering, not load balancing.

\* Option B (`load_balance_vm_attachments=true`): Correct. The `load_balance_vm_attachments=true` parameter enables load balancing of VM attachments for a Volume Group. When enabled, this setting distributes the iSCSI connections from VMs to multiple CVMs in the cluster, balancing the I/O load across CVMs. This improves performance for VMs with intensive I/O by ensuring that no single CVM becomes a bottleneck.

\* Option C (`load_balance_vm_attachments=enable`): Incorrect. While this option is close to the correct parameter, the syntax is incorrect. The `load_balance_vm_attachments` parameter uses `true` or `false` as its value, not `enable`. The correct syntax is `load_balance_vm_attachments=true` (option B).

\* Option D (`flash_mode=true`): Incorrect. Similar to option A, `flash_mode=true` enables flash mode for the Volume Group, prioritizing SSDs for I/O. This does not distribute I/O across multiple CVMs, as it addresses storage tiering rather than load balancing.

Why Option B?

The `load_balance_vm_attachments=true` parameter in the `vg.update` command enables load balancing for VM attachments to a Volume Group, distributing iSCSI connections across multiple CVMs. This ensures that the I/O load from VMs with intensive I/O is balanced across the cluster's CVMs, improving performance by preventing any single CVM from becoming a bottleneck. This directly addresses the requirement to distribute I/O for better performance.

Exact Extract from Nutanix Documentation:

From the Nutanix Volumes Administration Guide (available on the Nutanix Portal):

"To improve performance for Volume Groups with intensive I/O, use the `vg.update` command to enable load balancing with the parameter `load_balance_vm_attachments=true`. This setting distributes iSCSI connections from VMs across multiple CVMs in the cluster, balancing the I/O load and preventing bottlenecks."

:

Nutanix Volumes Administration Guide, Version 6.0, Section: "Optimizing Performance for Volume Groups" (Nutanix Portal). Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Volumes Performance Tuning".

## NEW QUESTION # 80

Before upgrading Files or creating a file server, which component must first be upgraded to a compatible version?

- A. File Analytics
- B. FSM
- C. FSVM
- D. Prism Central

**Answer: D**

Explanation:

The component that must first be upgraded to a compatible version before upgrading Files or creating a file server is Prism Central. Prism Central is a web-based user interface that allows administrators to manage multiple Nutanix clusters and services, including Files. Prism Central must be upgraded to a compatible version with Files before upgrading an existing file server or creating a new file server. Otherwise, the upgrade or creation process may fail or cause unexpected errors. Reference: Nutanix Files Administration Guide, page 21; Nutanix Files Upgrade Guide

## NEW QUESTION # 81

A company uses Linux and Windows workstations. The administrator is evaluating solution for their file storage needs.

The solution should support these requirements:

- \* Distributed File System
- \* Active Directory integrated
- \* Scale out architecture

- A. Mine
- B. Files
- C. Objects
- D. Volumes

**Answer: B**

#### Explanation:

The solution that meets the company's requirements for their file storage needs is Files. Files is a feature that allows users to create and manage file server instances (FSIs) on a Nutanix cluster. FSIs can provide SMB and NFS access to file shares and exports for different types of clients. Files supports these requirements:

Distributed File System: Files uses a distributed file system that spans across multiple FSVMs (File Server VMs), which improves scalability, performance, and availability.

Active Directory integrated: Files can integrate with Active Directory for authentication and authorization of SMB clients and multiprotocol NFS clients.

Scale out architecture: Files can scale out by adding more FSVMs to an existing FSI or creating new FSIs on the same or different clusters. Reference: Nutanix Files Administration Guide, page 27; Nutanix Files Solution Guide, page 6

#### NEW QUESTION # 82

An administrator successfully installed Objects and was able to create a bucket.

When using the reference URL to access this Objects store, the administrator is unable to write data in the bucket when using an Active Directory account.

Which action should the administrator take to resolve this issue?

- A. Verify Access Keys for the user.
- B. Replace SSL Certificates at the Object store level.
- C. Reset the Active Directory user password.
- D. Verify sharing policies at the bucket level.

#### Answer: A

#### Explanation:

The action that the administrator should take to resolve this issue is to verify Access Keys for the user. Access Keys are credentials that allow users to access Objects buckets using S3-compatible APIs or tools. Access Keys consist of an Access Key ID and a Secret Access Key, which are used to authenticate and authorize requests to Objects. If the user is unable to write data in the bucket using an Active Directory account, it may be because the user does not have valid Access Keys or the Access Keys do not have sufficient permissions. The administrator can verify and manage Access Keys for the user in Prism Central. Reference: Nutanix Objects User Guide, page 13; Nutanix Objects Solution Guide, page 8

#### NEW QUESTION # 83

.....

When you prepare for Nutanix NCP-US-6.5 certification exam, it is unfavorable to blindly study exam-related knowledge. There is a knack to pass the exam. If you make use of good tools to help you, it not only can save your much more time and also can make you sail through NCP-US-6.5 test with ease. If you want to ask what tool it is, that is, of course Pass4suresVCE Nutanix NCP-US-6.5 exam dumps.
