- A. Running data and media processing jobs
- B. Performing automation tasks for cloud operations
- C. Running containerized apps on Kubernetes**
- D. Running APIs and web applications

#### NEW QUESTION # 36

Why are availability domains within the same OCI region connected by a low-latency, high-bandwidth network?

- A. To allow for high-availability connectivity and building replicated systems**
- B. To ensure all domains share the same infrastructure
- C. To increase the likelihood of simultaneous failures

- D. To reduce the need for encryption between domains

**Answer: A**

Explanation:

The main purpose of connecting availability domains with a low-latency, high-bandwidth network is to enable high-availability connectivity and facilitate the building of replicated systems. This network infrastructure allows for seamless communication between domains, supporting the creation of redundant and resilient systems for increased reliability.
