

High Hit Rate Exam F5CAB4 Certification Cost Provide Prefect Assistance in F5CAB4 Preparation

2026 Latest VerifiedDumps F5CAB4 PDF Dumps and F5CAB4 Exam Engine Free Share: <https://drive.google.com/open?id=10e9FPdafyko-E8DsRAA0v-pPSVNdPVH7>

For candidates who will attend an exam, some practice for it is necessary. F5CAB4 Exam Dumps of us will give you the practice you need. F5CAB4 exam dumps of us contain the knowledge point of the exam. Skilled professionals will verify the questions and answers, which will guarantee the correctness. Besides, we also offer you free update for one year after purchasing, and the update version will send to your email address automatically.

If you want to be a more successful person and become the best, the first step you need to take is to have our F5CAB4 exam questions. Get an internationally certified F5CAB4 certificate to prove your strength. This is the best way. Your strength and efficiency will really bring you more job opportunities. And our F5CAB4 study braindumps will help you pass the exam easily and get the certification for sure.

Updated F5CAB4 Testkings - Simulated F5CAB4 Test

VerifiedDumps makes your F5CAB4 exam preparation easy with it various quality features. Our F5CAB4 exam braindumps come with 100% passing and refund guarantee. VerifiedDumps is dedicated to your accomplishment, hence assures you successful in F5CAB4 Certification exam on the first try. If for any reason, a candidate fails in F5CAB4 exam then he will be refunded his money after the refund process. Also, we offer 1 year free updates to our F5CAB4 Exam esteemed user, these updates are applicable to your account right from the date of purchase. 24/7 customer support is favorable to candidates who can email us if they find any ambiguity in the F5CAB4 exam dumps, our support will merely reply to your all F5CAB4 exam product related queries.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q36-Q41):

NEW QUESTION # 36

A BIG-IP Administrator needs to update the list of configured NTP servers. In which area of the Configuration Utility should the BIG-IP Administrator perform this update?

- A. System > Platform
- B. System > Services
- C. System > Configuration
- D. System > Preferences

Answer: C

Explanation:

NTP (Network Time Protocol) is vital for management connectivity and HA state synchronization. Correct time is required for log timestamping and device trust group communication. To manage these settings, the administrator navigates to System > Configuration, where general system-level services like NTP and DNS are defined to ensure the Control Plane remains synchronized

with the network environment.

NEW QUESTION # 37

Which command will provide the BIG-IP Administrator with the current device HA status? (Choose one answer)

- A. show /sys failover
- B. list /cm failover
- C. show /cm failover-status

Answer: C

Explanation:

To determine the current failover (HA) status of a BIG-IP system using tmsh, F5 documentation explicitly states that the administrator should use the following command:

show /cm failover-status

This command displays:

The current failover state (active, standby, or offline)

Detailed failover status information

The operational HA condition of the device within a device group

According to F5 Knowledge Base Article K08452454, the documented procedure for checking failover status is:

Log in to the TMOS Shell (tmsh)

Run show /cm failover-status

Why the other options are incorrect:

A). list /cm failover shows configuration settings, not operational HA status.

B). show /sys failover is not the documented command for checking current failover status and does not align with F5's recommended procedure.

NEW QUESTION # 38

A BIG-IP Administrator uses a device group to share the workload and needs to perform service on a BIG-IP device currently active for a traffic group. The administrator needs to enable the traffic group to run on another BIG-IP device in the device group. What should the administrator do to meet the requirement? (Choose one answer)

- A. Select Traffic Group and then select Force to Standby
- B. Select Traffic Group on Primary Unit and then select Demote
- C. Select Traffic Group and then select Failover
- D. Create a new Traffic Group and then fail to Standby Unit

Answer: C

Explanation:

Traffic Groups are the mechanism BIG-IP uses to control which device owns specific application traffic in a high-availability (HA) configuration. When maintenance is required on a device that is currently active for a traffic group, the correct and recommended action is to fail over that traffic group to another device in the device group.

* Failing over the traffic group moves ownership of that traffic group (and the virtual servers associated with it) to another available device without forcing the entire device into standby.

* This allows targeted maintenance while minimizing impact to other traffic groups that may still be active on the device.

Why the other options are incorrect:

* A is unnecessary and incorrect; traffic groups are not recreated for routine maintenance.

* C forces the entire device to standby, which may move more traffic than intended.

* D (Demote) affects device trust/priority behavior and is not the standard or recommended method for moving traffic group ownership.

Therefore, selecting the Traffic Group and choosing Failover is the correct solution.

NEW QUESTION # 39

Which log file should the BIG-IP Administrator check to determine if a specific user tried to log in to the BIG-IP Configuration Utility? (Choose one answer)

- A. /var/log/httpd
- B. /var/log/secure
- C. /var/log/ltn
- D. /var/log/pam/tallylog

Answer: B

Explanation:

On BIG-IP systems, all authentication attempts for administrative access-including logins to the Configuration Utility (GUI)-are logged in /var/log/secure. This log file records:

- * Successful and failed login attempts
- * The username used
- * The authentication method (local, LDAP, RADIUS, etc.)
- * Access denials and PAM authentication errors

Why the other options are incorrect:

- * /var/log/pam/tallylog tracks account lockouts and failed attempt counters, not detailed login attempts.
 - * /var/log/ltn logs traffic management events, not administrative authentication.
 - * /var/log/httpd logs web server activity but does not record authentication success or failure for BIG-IP administrative users.
- Therefore, the correct log file to verify whether a user attempted to log in to the BIG-IP Configuration Utility is /var/log/secure.

NEW QUESTION # 40

A BIG-IP Administrator is conducting maintenance on one BIG-IP appliance in an HA Pair. Why should the BIG-IP Administrator put the appliance into FORCED_OFFLINE state?

- A. To terminate existing connections to Virtual Servers and prevent the appliance from becoming active
- B. To terminate connections to the management IP and decrease persistent connections
- C. To preserve existing connections to Virtual Servers and reduce the CPU load
- D. To allow new connections to Virtual Servers and ensure the appliance becomes active

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Placing a device in the FORCED_OFFLINE state is a critical procedural concept for HA maintenance. Unlike simply being 'Standby', the FORCED_OFFLINE state ensures that the Control Plane will not participate in failover selection, effectively preventing the device from becoming 'Active' even if the peer fails. This state also allows the administrator to terminate existing connections to ensure no traffic is being processed during the maintenance window.

NEW QUESTION # 41

.....

The prep material created by the VerifiedDumps are the best choice because we provide you with F5 F5CAB4 exam preparation material in 3 different formats. This is helpful for you since every candidate has a different study style and the diversity of BIG-IP Administration Control Plane Administration (F5CAB4) exam preparation formats can aid the study pattern.
