CS0-002 Reliable Dumps Sheet, Accurate CS0-002 Answers

Our CS0-002 real dumps was designed by many experts in different area, they have taken the different situation of customers into consideration and designed practical CS0-002 study materials for helping customers save time. Whether you are a student or an office worker, we believe you will not spend all your time on preparing for CS0-002 Exam. With our simplified information, you are able to study efficiently.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q287-Q292):

NEW QUESTION # 287

An organization is focused on restructuring its data governance programs and an analyst has been Tasked with surveying sensitive data within the organization. Which of the following is the MOST accurate method for the security analyst to complete this assignment?

- A. Create a survey and distribute it to data owners.
- B. Consult with an internal data custodian.
- C. Review enterprise-wide asset Inventory.
- **D. Perform an enterprise-wide discovery scan.**

Answer: D

Explanation:

A data governance program is a collection of practices, policies, and procedures that manage, leverage, and protect the data assets of an organization¹. It requires changing the workplace culture and adding some software¹. To survey sensitive data within the organization, the most accurate method is to perform an enterprise-wide discovery scan that can identify and classify data from various sources and systems². This way, the analyst can have a comprehensive view of the data landscape and its quality, security, accessibility, and usage. Consulting with an internal data custodian (B) or reviewing enterprise-wide asset inventory may provide some insights, but not as accurate or complete as a discovery scan. Creating a survey and distributing it to data owners (D) may be time-consuming and unreliable, as data owners may not have the full knowledge or awareness of their data.

NEW QUESTION # 288

When of the following techniques can be implemented to safeguard the confidentiality of sensitive information while allowing limited access to authorized individuals?

- A. Hashing
- **B. Masking**
- C. Salting
- D. Deidentification

Answer: B

Explanation:

<https://www.techtarget.com/searchsecurity/definition/data-masking>

NEW QUESTION # 289

A company's Chief Information Security Officer (CISO) is concerned about the integrity of some highly confidential files. Any changes to these files must be tied back to a specific authorized user's activity session. Which of the following is the BEST technique to address the CISO's concerns?

- A. Use Wireshark to scan all traffic to and from the directory. Monitor the files for unauthorized changes.
- B. Regularly use SHA-256 to hash the directory containing the sensitive information. Monitor the files for unauthorized changes.
- **C. Configure DLP to reject all changes to the files without pre-authorization. Monitor the files for unauthorized changes.**
- **D. Place a legal hold on the files. Require authorized users to abide by a strict time context access policy. Monitor the files for unauthorized changes.**

Answer: C,D

NEW QUESTION # 290

A security analyst needs to reduce the overall attack surface.

Which of the following infrastructure changes should the analyst recommend?

- A. Increase the network segmentation.
- B. Implement a honeypot.
- **C. Air gap sensitive systems.**
- D. Implement a cloud-based architecture.

Answer: C

Explanation:
