New Amazon CLF-C02 Exam Question, CLF-C02 Reliable Source

If you are already determined to obtain an international certificate, you must immediately purchase our CLF-C02 exam practice. Our products have been certified as the highest quality products in the industry. If you know CLF-C02 Training Materials through acquaintance introduction, then you must also know the advantages of CLF-C02. We are both perfect on the quality and the price of the CLF-C02 study braindumps.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q24-Q29):

NEW QUESTION # 24

To assist companies with Payment Card Industry Data Security Standard (PCI DSS) compliance in the cloud. AWS provides:

- A. an AWS Attestation of Compliance (AOC) report for specific AWS services.
- B. required PCI compliance certifications for any application running on AWS.
- C. professional PCI compliance services.
- D. physical inspections of data centers by appointment.

Answer: A

Explanation:

AWS provides an Attestation of Compliance (AOC) report for specific AWS services to assist companies in achieving Payment Card Industry Data Security Standard (PCI DSS) compliance in the cloud. This report demonstrates that AWS services meet the necessary PCI DSS requirements. AWS does not offer physical inspections of data centers by appointment, nor does it provide certifications for any application running on AWS. Additionally, AWS does not provide professional PCI compliance services; companies must manage their PCI compliance in their environment.

NEW QUESTION # 25

A developer who has no AWS Cloud experience wants to use AWS technology to build a web application. Which AWS service should the developer use to start building the application?

- A. AWS Lambda
- B. Amazon Elastic Container Service (Amazon ECS)
- C. Amazon SageMaker
- **D. Amazon Lightsail**

Answer: D

Explanation:

Amazon Lightsail is an easy-to-use cloud platform that offers everything you need to build an application or website, plus a cost-effective, monthly plan¹. It is designed for developers who have little or no prior cloud experience and want to launch and manage applications on AWS with minimal complexity². Amazon SageMaker is a service for building, training, and deploying machine learning models³. AWS Lambda is a service that lets you run code without provisioning or managing servers⁴. Amazon Elastic Container Service (Amazon ECS) is a fully managed container orchestration service.

NEW QUESTION # 26

A user wants to identify any security group that is allowing unrestricted incoming SSH traffic. Which AWS service can be used to accomplish this goal?

- **A. AWS Trusted Advisor**
- B. Amazon Macie
- C. AWS Shield
- D. Amazon Cognito

Answer: A

Explanation:

Explanation

The correct answer to the question is D because AWS Trusted Advisor is an AWS service that can be used to accomplish the goal of identifying any security group that is allowing unrestricted incoming SSH traffic. AWS Trusted Advisor is a service that provides customers with recommendations that help them follow AWS best practices. Trusted Advisor evaluates the customer's AWS environment and identifies ways to optimize their AWS infrastructure, improve security and performance, reduce costs, and monitor service quotas. One of the checks that Trusted Advisor performs is the Security Groups - Specific Ports Unrestricted check, which flags security groups that allow unrestricted access to specific ports, such as port 22 for SSH. Customers can use this check to review and modify their security group rules to restrict SSH access to only authorized sources.

Reference: Security Groups - Specific Ports Unrestricted

NEW QUESTION # 27

A company's workload can recover with minimal downtime when failures occur. Which AWS Cloud benefit does this scenario represent?

- A. Scalability
- B. Elasticity
- C. Agility
- **D. Resiliency**

Answer: D

NEW QUESTION # 28

Which task requires the use of AWS account root user credentials?

- **A. The creation of an organization in AWS Organizations**
- B. The deletion of Amazon EC2 instances

- C. The deletion of IAM users
- D. The change to a different AWS Support plan

Answer: A

Explanation:

The creation of an organization in AWS Organizations requires the use of AWS account root user credentials. The AWS account root user is the email address that was used to create the AWS account. The root user has complete access to all AWS services and resources in the account, and can perform sensitive tasks such as changing the account settings, closing the account, or creating an organization. The root user credentials should be used sparingly and securely, and only for tasks that cannot be performed by IAM users or roles⁴

NEW QUESTION # 29

.....

After the client pay successfully they could receive the mails about CLF-C02 guide questions our system sends by which you can download our test bank and use our study CLF-C02 STUDY materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the CLF-C02 Study Materials to learn. The procedures are simple and save clients' time. For the client the time is limited and very important and our product satisfies the client's needs to download and use our CLF-C02 practice engine immediately.
