

Detail FCSS_SASE_AD-24 Explanation & Dumps

FCSS_SASE_AD-24 PDF

The FCSS_SASE_AD-24 exam is the right way to learn new in-demand skills and upgrade knowledge. After passing the FCSS - FortiSASE 24 Administrator (FCSS_SASE_AD-24) exam the successful candidates can gain multiple personal and professional benefits with the real Fortinet FCSS_SASE_AD-24 Exam Questions. Validation of skills, more career opportunities, increases in salary, and increases in the chances of promotion are some prominent benefits of the Fortinet FCSS_SASE_AD-24 certification exam.

Our FCSS_SASE_AD-24 study materials are the accumulation of professional knowledge worthy practicing and remembering. There are so many specialists who join together and contribute to the success of our FCSS_SASE_AD-24 guide quiz just for your needs. As well as responsible and patient staff who has being trained strictly before get down to business and interact with customers on our FCSS_SASE_AD-24 Exam Questions. You can contact with our service, and they will give you the most professional guide.

Dumps FCSS_SASE_AD-24 PDF & Valid Test FCSS_SASE_AD-24 Fee

Time talks. The passing rate for EduDump FCSS_SASE_AD-24 download free dumps is really high. Our users do not worry about tests with our products. There was one big piece missing from the puzzle. As exams are very difficult and low passing rate, it will be useless if you do not purchase valid dumps. Fortinet FCSS_SASE_AD-24 Exam Learning materials make you half the work double the things. Once you pass exam you will obtain a satisfied jobs as you desire.

Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which of the following describes the FortiSASE inline-CASB component?

- A. It detects data at rest.
- B. It provides visibility for unmanaged locations and devices.
- **C. It is placed directly in the traffic path between the endpoint and cloud applications.**
- D. It uses API to connect to the cloud applications.

Answer: C

Explanation:

The FortiSASE inline-CASB (Cloud Access Security Broker) component is designed to provide real-time security and visibility by being placed directly in the traffic path between the endpoint and cloud applications. Inline-CASB inspects traffic as it flows to and from cloud applications, enabling enforcement of security policies, detection of threats, and prevention of unauthorized access. This approach ensures that all interactions with cloud applications are monitored and controlled in real time.

Here's why the other options are incorrect:

A. It provides visibility for unmanaged locations and devices: While inline-CASB enhances visibility, its primary function is to inspect and secure traffic in real time. Visibility for unmanaged locations and devices is typically achieved through other components like

endpoint agents or API-based CASB.

C . It uses API to connect to the cloud applications: API-based CASB is a different approach that relies on APIs provided by cloud applications to monitor and manage data. Inline-CASB operates directly in the traffic flow rather than using APIs.

D . It detects data at rest: Detecting data at rest is typically handled by Data Loss Prevention (DLP) tools or API-based CASB solutions. Inline-CASB focuses on inspecting traffic in motion, not data stored in cloud applications.

NEW QUESTION # 45

How does analyzing FortiSASE logs help in compliance with regulatory standards?

Response:

- A. By ensuring all recreational internet use is logged
- B. By documenting all user login times and durations
- C. By tracking the number of emails sent per day
- D. By providing evidence of proactive threat detection and response

Answer: D

NEW QUESTION # 46

What considerations are important when configuring SASE administration settings?

(Select all that apply)

Response:

- A. Limiting the number of concurrent sessions per user
- B. Scheduling regular maintenance windows
- C. Allowing unencrypted data transfers
- D. Geographic restrictions for data access

Answer: A,B,D

NEW QUESTION # 47

FortiSASE can only be deployed in cloud environments and does not support on-premises integration.

Response:

- A. False
- B. True

Answer: A

NEW QUESTION # 48

Your organization is currently using FortiSASE for its cybersecurity. They have recently hired a contractor who will work from the HQ office and who needs temporary internet access in order to set up a web-based point of sale (POS) system.

What is the recommended way to provide internet access to the contractor?

- A. Use zero trust network access (ZTNA) and tag the client as an unmanaged endpoint.
- B. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy.
- C. Configure a VPN policy on FortiSASE to provide access to the internet.
- D. Use FortiClient on the endpoint to manage internet access.

Answer: A

Explanation:

The recommended way to provide temporary internet access to the contractor is to use Zero Trust Network Access (ZTNA) and tag the client as an unmanaged endpoint . ZTNA ensures that only authorized users and devices can access specific resources, while

treating all endpoints as untrusted by default. By tagging the contractor's device as an unmanaged endpoint, you can apply strict access controls and ensure that the contractor has limited access to only the necessary resources (e.g., the web-based POS system) without exposing the internal network to unnecessary risks.

Here's why the other options are less suitable:

A . Use FortiClient on the endpoint to manage internet access: While FortiClient provides endpoint security and management, it requires installation and configuration on the contractor's device. This may not be feasible for temporary contractors or unmanaged devices.

B . Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy: While this approach can control web traffic, it does not provide the granular access control and security posture validation offered by ZTNA. Additionally, managing PAC files can be cumbersome and less secure compared to ZTNA.

D . Configure a VPN policy on FortiSASE to provide access to the internet: Using a VPN policy would grant broader access to the network, which is not ideal for a temporary contractor. It increases the risk of unauthorized access to internal resources and does not align with the principle of least privilege.
