

Nutanix NCP-EUC Valid Test Cram, Latest NCP-EUC Exam Experience

BONUS!!! Download part of VCEPrep NCP-EUC dumps for free: <https://drive.google.com/open?id=1OnjGkuTTEBqm4HJJTRagBNhjj5-vhV-N>

In life we mustn't always ask others to give me something, but should think what I can do for others. At work if you can create a lot of value for the boss, the boss of course care about your job, including your salary. The same reason, if we are always a ordinary IT staff, then you will be eliminated sooner or later. We should pass the IT exams, and go to the top step by step. VCEPrep's Nutanix NCP-EUC Exam Materials can help you to find shortcut to success. There are a lot of IT people who have started to act. Success is in the VCEPrep Nutanix NCP-EUC exam training materials. Of course you can not miss it.

Nutanix NCP-EUC (Nutanix Certified Professional - End-User Computing) Certification Exam is a highly respected certification in the field of end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is designed to validate the skills and knowledge required to deploy, manage, and support Nutanix infrastructure for end-user computing solutions. NCP-EUC Exam includes a range of topics, such as desktop and application virtualization, end-user management, and endpoint security.

Latest Nutanix NCP-EUC Exam Experience & Vce NCP-EUC Download

Do you want to pass NCP-EUC practice test in your first attempt with less time? Then you can try our latest training certification exam materials. We not only provide you valid NCP-EUC exam answers for your well preparation, but also bring guaranteed success results to you. The NCP-EUC pass review written by our IT professionals is the best solution for passing the technical and complex certification exam.

Nutanix Certified Professional - End-User Computing (NCP-EUC) exam is designed to test the skills and knowledge of IT professionals in deploying and managing Nutanix end-user computing solutions. NCP-EUC Exam is intended for individuals who have experience in virtualization, desktop and application delivery, and data center operations. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification demonstrates their proficiency in designing, implementing, and maintaining Nutanix-based EUC solutions.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q76-Q81):

NEW QUESTION # 76

Refer the exhibit.
Refer to the exhibit.

Which statement is true?

- A. Five instances are running on every Weekday from 09:00am till 05:00 pm
- B. Five instances are running Tuesday and Thursday from 00:00am till 24:00 pm
- C. Five instances are running Tuesday and Thursday from 09:00 am till 05:00 pm
- D. Five instances are running on every Weekday fro, 00:00am till 24:00 pm

Answer: B

Explanation:

The schedule has two rows: one for Weekdays and one for Tuesday and Thursday.

Each row has a column for Instances, which indicates how many instances should be running during that time range.

Each row also has a column for Time Range, which indicates the start and end time for running the instances.

The time range is expressed in 24-hour format, where 00:00 means midnight and 24:00 means midnight of the next day.

According to the exhibit, the schedule Dev has the following settings:

On Weekdays (Monday to Friday), five instances are running from 09:00 am till 05:00 pm.

On Tuesday and Thursday, five instances are running from 00:00 am till 24:00 pm.

NEW QUESTION # 77

An administrator needs to provide a standard desktop to a group of users that will replace their existing physical desktop. The administrator wants to minimize administrative overhead and application compatibility concerns.

Which desktop provisioning method best meets the requirements?

- A. Remote PC
- **B. Persistent VDI**
- C. Non-Persistent VDI
- D. Hosted Shared Desktop

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix and Citrix Desktop Delivery Models:

* Requirement Analysis: The goal is to replace a physical desktop while minimizing Application Compatibility concerns.

* Why Persistent VDI? Persistent VDI (often Full Clones) provides a 1:1 user-to-VM mapping where the user's data, profile, and installed applications persist across reboots, exactly mimicking a physical PC. This offers the highest application compatibility because apps that require local installation, hard-coded paths, or local licensing work without the complex layering or virtualization required in non-persistent setups.

* Comparison:

* Non-Persistent VDI (C): often requires "App Layering" or complex image management for incompatible apps, increasing overhead for difficult applications.

* Hosted Shared (B): (RDS) has the lowest app compatibility due to multi-user OS limitations.

NEW QUESTION # 78

The administrator needs to migrate non-persistent base images using Move from a legacy vSphere environment to an AHV cluster.

What must the administrator do with regards to the Nutanix Guest Tools (NGT)?

- A. Leave NGT in, because it is required to run VMs on AHV.
- B. Remove NGT before conversion and before reprovisioning.
- **C. Remove NGT after conversion and before reprovisioning.**
- D. Remove NGT after conversion and after reprovisioning.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix Move and Citrix/VDI Master Image Preparation guides:

* The Process: When Nutanix Move migrates a VM from ESXi to AHV, it installs Nutanix Guest Tools (NGT) (including VirtIO drivers) on the target VM to ensure it boots and functions correctly on the AHV hypervisor.

* The Issue: If this migrated VM is intended to be a Base Image (Gold Image) for a non-persistent pool (MCS/PVS), the NGT instance installed by Move contains specific identity information (VM UUIDs /communication certificates) unique to that single VM.

* The Requirement: If you clone this image without cleaning up, every clone will attempt to use the same NGT identity, causing communication conflicts with the cluster.

* The Solution: The administrator must Remove NGT (or run the NGT cleanup interaction) after the conversion (once the VM is on AHV) and before reprovisioning (before sealing the image and creating clones). This ensures the clones can register as unique entities.

NEW QUESTION # 79

A company based out of San Jose, CA, USA is considering deploying a global virtual desktop environment.

Currently, there is no solution for virtual desktops. The company has employees globally and decides to leverage the Public Cloud

across multiple regions for their deployment.

Which factor is the most important for choosing a public cloud data center location to optimize for end-user performance?

- A. The distance from the data center to the end users should be minimized.
- B. The data center should be in the same state or country as the end users.
- C. The network latency between the end user and the data center should be minimized,
- D. The combined distance the corporate headquarters, the data center, and the users should be minimized.

Answer: C

Explanation:

one of the factors that affects end-user performance in a virtual desktop environment is network latency, which is the time it takes for data packets to travel between two points on a network.

Therefore, if the company wants to optimize end-user performance, they should choose a public cloud data center location that minimizes the network latency between the end user and the data center.

NEW QUESTION # 80

Refer to the exhibit.

An administrator is deploying an Instant Clone desktop pool on an 8-node Nutanix cluster. The system displays a warning message, as shown in the exhibit.

What should the administrator do to resolve the issue?

- A. use both VSA and Shadow Clones
- B. Enable View Storage Accelerator
- C. Disable Shadow Clones
- D. Safely ignore this warning

Answer: C

Explanation:

Shadow Clones are a unique feature of the AOS storage that enables distributed caching of virtual disks (vDisks) used by virtual machines¹. Shadow Clones provide effective caching optimization in distributed multireader scenarios, such as large VDI and cloud deployments².

The warning message you see indicates that Shadow Clones are disabled on your Nutanix cluster. This may affect the performance of your Instant Clone desktop pool, as it will not benefit from the caching optimization provided by Shadow Clones.
