Reliable CV0-004 Valid Test Sample & Leading Offer in Qualification Exams & Fast Download CV0-004: CompTIA Cloud+ (CV0-004) Certification Exam

Are there many friends around you have passed CompTIA CV0-004 Certification test? How could they have done this? Let TestsDumps.com tell you. TestsDumps CompTIA CV0-004 exam dumps provide you with the most comprehensive information and quality service, which is your unique choice. Don't hesitate. Come on and visit TestsDumps.com to know more information. Let us help you pass the exam.

CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q88-Q93):

NEW QUESTION # 88

A cloud engineer is reviewing the following Dockerfile to deploy a Python web application:

Which of the following changes should the engineer make to the file to improve container security?

- A. Ensure myapp/main/pyis owned by root.
- B. Remove the ENTRYPOINT instruction.
- C. Change the version from latest to 3.11.
- D. Add the instruction USER nonroot.

Answer: D

Explanation:

Adding USER nonroot ensures that the application runs as a non-root user within the container, reducing the risk of privilege escalation and limiting the damage that could be done if the container is compromised. Running containers as root is generally discouraged for security reasons.

NEW QUESTION # 89

An administrator used a script that worked in the past to create and tag five virtual machines. All of the virtual machines have been created; however, the administrator sees the following results:

```
{ tags: [ ] }
```

Which of the following is the most likely reason for this result?

- A. Service quotas
- B. Compatibility issues
- C. Command deprecation
- D. API throttling

Answer: C

Explanation:

The most likely reason for the script creating virtual machines without tags, despite working in the past, is command deprecation. Cloud service providers update their APIs and CLI commands over time, and a previously used command to tag resources might no longer be valid.

Understanding cloud service APIs and the importance of keeping up with updates is part of cloud technical operations covered in CompTIA Cloud+.

NEW QUESTION # 90

Which of the following technologies should be used by a person who is visually impaired to access data from the cloud?

- A. Object character recognition
- B. Sentiment analysis
- C. Text-to-voice
- D. Visual recognition

Answer: C

Explanation:

Text-to-voice (or text-to-speech) technology should be used by a person who is visually impaired to access data from the cloud. It converts text data into audible speech, allowing visually impaired individuals to receive the information audibly. References: CompTIA Accessibility in IT Study Guide.

NEW QUESTION # 91

Which of the following is the best type of database for storing different types of unstructured data that may change frequently?

- A. Non-relational
- B. Vector
- C. Relational
- D. Graph

Answer: A

Explanation:

Non-relational (NoSQL) databases are best for storing different types of unstructured data that may change frequently. They are designed to handle a wide variety of data types and are not constrained by the fixed schema of relational databases, making them more flexible and scalable for unstructured data.

NEW QUESTION # 92

A cloud engineer is deploying a cloud solution that will be used on premises with need-to-know access. Which of the following cloud deployment models best meets this requirement?

- A. Community
- B. Hybrid

- C. Private
- D. Public

Answer: C

Explanation:

A private cloud deployment model is the most appropriate when the requirement is for 'need-to-know' access, as it offers a more secure environment with resources dedicated to a single organization. It can be hosted on-premises or off-premises but is maintained on a private network, ensuring greater control over the data, security, and compliance when compared to other cloud models.
