Fire-Inspector-II Free Practice & New Exam Fire-Inspector-II Braindumps

Online test version is the best choice for IT person who want to feel the atmosphere of International Code Council real exam. And you can practice latest Fire-Inspector-II exam questions on any electronic equipment without any limit. Besides, there is no need to install any security software because our Fire-Inspector-II Vce File is safe, you just need to click the file and enter into your password.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q76-Q81):

NEW QUESTION # 76

Platforms used for access to aboveground tanks storing flammable or combustible liquids shall be:

- A. located no closer than 3 ft. to the side of the tank.
- **B. built of noncombustible construction.**
- C. built of nonferrous, nonsparking metal.
- D. at least 4 ft. wide.

Answer: B

Explanation:

Platforms used for access to aboveground tanks storing flammable or combustible liquids are regulated by 2021 IFC, Section 5704 - Storage of Flammable and Combustible Liquids.

IFC 5704.2.7.4 - Access to Aboveground Tanks:

"Platforms, ladders, and stairways providing access to aboveground tanks storing flammable or combustible liquids shall be of noncombustible construction." This ensures that in case of fire, the access structures do not contribute to the spread of flames.

Why Other Options Are Incorrect?

A). At least 4 ft. wide. - The IFC does not specify a required width for platforms.

C). Built of nonferrous, nonsparking metal. - While important in hazardous areas, this is not a general requirement for platforms accessing aboveground tanks.

D). Located no closer than 3 ft. to the side of the tank. - There is no specific 3-ft. clearance requirement in the IFC for platforms.

Correct answer: B. Built of noncombustible construction.

NEW QUESTION # 77

What is the maximum travel distance to an exit from within a tent?

- A. Any distance approved by the chief
- B. 100 ft.
- C. 75 ft.
- **D. 150 ft.**

Answer: D

Explanation:

The maximum travel distance to an exit from within a tent is regulated under the 2021 International Fire Code (IFC), Section 3103.12.2 - Means of Egress (Tents and Membrane Structures).

IFC Section 3103.12.2 - Travel Distance:

"The maximum travel distance to an exit shall not exceed 150 feet (45,720 mm)." Why Other Options Are Incorrect?

A). 75 ft. - This limit does not apply to tents; the correct limit is 150 ft.

B). 100 ft. - Too restrictive; the IFC allows up to 150 ft.

D). Any distance approved by the chief. - The fire code does not allow unlimited travel distances; 150 feet is the maximum permitted by code.

Correct answer: C. 150 ft.

NEW QUESTION # 78

The maximum quantity of liquefied petroleum gas (LP-gas) in containers stored by a dealer awaiting resale, and are at one location in a building that is not accessible to the public, is ___ lb. water capacity.

- A. 2,500
- **B. 2,000**
- C. 0
- D. 1,000

Answer: B

Explanation:

The storage of liquefied petroleum gas (LP-gas) in containers by dealers awaiting resale is regulated by the 2021 International Fire Code (IFC), Section 6109 - Storage of Portable LP-Gas Containers.

IFC 6109.11 - Storage Within Buildings Not Accessible to the Public:

"Storage of LP-gas containers in buildings that are not accessible to the public shall be limited to a maximum aggregate quantity of 2,000 pounds water capacity at one location." Why Other Options Are Incorrect?

A). 735 lb. - Too low; the maximum allowed is 2,000 lb.

- B). 1,000 lb. - Incorrect; IFC allows up to 2,000 lb.
D). 2,500 lb. - Exceeds the 2,000 lb. maximum permitted storage quantity.
Correct answer: C. 2,000 lb.

NEW QUESTION # 79

What fire-resistance rating is required for interior nonbearing walls and partitions in Type IV construction?

- A. 0 hours
- B. 2 hours
- C. 1-1/2 hours
- D. 1 hour

Answer: A

Explanation:

Fire-Resistance Rating for Nonbearing Walls in Type IV Construction

Type IV (Heavy Timber) construction, as defined by the International Building Code (IBC) 2021, Section 602.4, consists of large, solid or laminated wood members.

Interior nonbearing walls and partitions in Type IV construction are not required to have a fire-resistance rating (0 hours) unless they separate different occupancies or are specifically mandated by another code provision.

2. Why Type IV Does Not Require a Rating for Nonbearing Walls

The heavy timber components inherently provide fire resistance due to their large cross-section, which chars on the surface and slows fire penetration.

IBC Table 601 confirms that interior nonbearing walls in Type IV construction do not have a required fire-resistance rating.

3. Verification of Other Options

Option B (1 hour) - Incorrect, as Type IV does not require a 1-hour rating for interior nonbearing walls unless specific conditions apply.

Option C (1-1/2 hours) - Incorrect, as there is no code requirement for this level of rating in Type IV nonbearing walls.

Option D (2 hours) - Incorrect, as Type IV walls are not rated unless separating occupancies.

International Building Code (IBC) 2021 - Section 602.4 (Type IV Construction Requirements) IBC Table 601 (Fire-Resistance Ratings for Building Elements) ICC Fire Inspector II Study Guide (2021)

NEW QUESTION # 80

Foamed plastics or materials containing foamed plastics used for stage scenery must be approved when tested in accordance with

- A. CPSC 16CFR
- B. ASTM D 1784
- C. NFPA 11A
- D. UL 1975

Answer: D

Explanation:

Foamed plastics or materials containing foamed plastics used for stage scenery must meet strict fire performance requirements to prevent rapid flame spread and fire hazards in assembly occupancies.

The correct fire test standard for these materials is UL 1975 - Standard for Fire Tests for Foamed Plastics Used for Decorative Purposes.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 807.4.2 (Foamed Plastics for Stage Scenery) IFC 807.4.2 states that foamed plastics used in scenery must be tested and approved per UL 1975 to ensure fire safety.

2. UL 1975 - Standard for Fire Tests for Foamed Plastics Used for Decorative Purposes This standard evaluates the flammability and smoke production of foamed plastics used in decorative applications, including stage scenery.

Detailed Explanation of Answer Choices:

Option A (Correct): UL 1975 is the required test standard for foamed plastics used in stage scenery, ensuring compliance with IFC 807.4.2.

Option B (Incorrect): NFPA 11A deals with foam-water fire suppression systems, not foamed plastics for decorative use.

Option C (Incorrect): CPSC 16CFR relates to consumer product safety regulations but does not address fire safety for foamed plastics on stage scenery.

Option D (Incorrect): ASTM D 1784 is a test for rigid PVC plastics and does not apply to foamed plastics used for stage scenery. Thus, the correct and verified answer is: A. UL 1975.

NEW QUESTION # 81

.....

Our Fire-Inspector-II study braindumps are comprehensive that include all knowledge you need to learn necessary knowledge, as well as cope with the test ahead of you. With convenient access to our website, you can have an experimental look of free demos before get your favorite Fire-Inspector-II prep guide downloaded. You can both learn useful knowledge and pass the exam with efficiency with our Fire-Inspector-II Real Questions easily. We are on the way of meeting our mission and purposes of helping exam candidates to consider the exam as a campaign of success and pass the exam successfully.
