ISTQB CTAL_TM_001 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Managing the Team: This section of the exam measures the skills of a Test Lead and addresses the human side of test management. Candidates must demonstrate how to identify the skills required for each project, assess and develop team competence, and apply motivating leadership practices. The syllabus also covers stakeholder relationship management, understanding interests and influence, articulating the business case for testing, and balancing cost-of-quality considerations to ensure testing is properly resourced, communicated, and valued within the wider project.
主題 2	<ul style="list-style-type: none">Managing the Test Activities: This section of the exam measures the skills of a Test Manager and covers the end-to-end coordination of testing work. Candidates must demonstrate how to plan testing—defining objectives, scope, resources, schedule, and risk treatments—then how to monitor progress against those plans, control deviations through corrective actions, and conclude testing with completion reports, archival of testware, and lessons-learned sessions. The syllabus also explores tailoring test activities to project context, applying risk-based testing to focus effort where it matters most, shaping a coherent project test strategy, leading process-improvement initiatives, and selecting and managing test tools throughout their lifecycle.
主題 3	<ul style="list-style-type: none">Managing the Product: This section of the exam measures the skills of a Test Analyst and focuses on the artefacts under test and the metrics that describe them. Examinees show how to define and collect test metrics to monitor quality and progress, estimate effort and resources for different test scopes, and organize defect management workflows that fit sequential, iterative, or hybrid lifecycles. The aim is to ensure test outcomes align with objectives and inform stakeholders through clear reporting, while using estimation techniques and defect data to guide ongoing test and process improvements.

最新的 ISTQB Test Manager Advanced CTAL_TM_001 免費考試真題 (Q161-Q166):

問題 #161

Which of the following is NOT true when following the V-Model lifecycle to organise and plan testing activities? SELECT ONE OPTION

- A. System test planning starts when project planning activities commence.
- B. Test execution activities run until exit criteria have been met.
- **C. Test analysis activities run concurrently with specification of requirements and design.**
- D. Reporting of all test results occurs when testing is complete for the whole project.

答案： C

問題 #162

Which of the following metrics is MOST LIKELY to trigger a control directive to increase test execution resources?

- A. Percentage of test cases that have been automated, showing that this is less than planned
- B. Percentage of test cases by their execution status, showing that the number of failures is greater than expected
- **C. Percentage of manual test cases by their execution status, showing that the number of tests run is less than planned**
- D. Percentage of test environment availability during scheduled hours, showing that this is less than planned

答案： C

解題說明：

The most direct trigger for resource adjustment is evidence that test execution is behind schedule.

"Test control... includes re-prioritizing tests... or changing the test schedule due to availability of resources."

- ISTQB-CTFL_Syllabus_2018_V3.1, section 5.3

Option A points directly to under-execution relative to plan, suggesting a need to scale up resources.

問題 #163

問題 #165

Which statement about defining process improvement actions using defect report information is TRUE?

- A. Information about defect root causes can be used to enable refactoring of troublesome components
- B. Information about defect location can be used to assess the effectiveness of test processes at finding defects
- **C. Information about the phase of introduction of defects can identify the lifecycle stages in which most defects are created**
- D. Information about duplicate and rejected defect reports can be used to assess the quality of debugging and fixing the defects

答案： C

解題說明：

Understanding when defects are introduced supports process improvement at the correct lifecycle stage, such as improving requirements reviews or design practices.

"The analysis of when defects were introduced in the development lifecycle helps to identify weak points and improve development or test processes."

-ISTQB CTFL Syllabus 2018, Section 5.6

Thus, Option B is the best answer for guiding improvement.
