You must be inspired by your interests and motivation. Once you print all the contents of our C-SEC-2405 practice dumps on the paper, you will find what you need to study is not as difficult as you imagined before. Also, you can make notes on your papers to help you memorize and understand the difficult parts of the C-SEC-2405 Exam Questions.

SAP Certified Associate - Security Administrator Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- A. Employer
- B. Administrator
- C. User
- D. Employee

Answer: C,D

Explanation:

In the SAP S/4HANA Business User Concept, the entities that share data with Business Partners are User and Employee. The User entity represents the technical user account in the system, defined in user master records, and is linked to Business Partners to associate system access with business roles and authorizations. The Employee entity represents the human resource data of an individual, such as their organizational assignment or job role, and is synchronized with Business Partners to ensure that user access aligns with their employment details. This integration ensures that Business Partners, which serve as a central entity for managing business relationships, have consistent data for access control and business processes. The Employer entity is not directly linked to Business Partners, as it represents the organization, not an individual.

Similarly, Administrator is a role or user type, not an entity sharing data with Business Partners. This data-sharing mechanism supports seamless identity and access management, enhancing security and operational alignment in SAP S/4HANA systems.

NEW QUESTION # 28

When you maintain authorizations for SAPUI5 Fiori apps, which of the following object types is the front-end authorization object type?

- A. TADIR G4BA - SAP Gateway Odata V4 Backend Service Group & Assignments
- B. TADIR IWSG - SAP Gateway: Service Groups Metadata
- C. TADIR IWSV - SAP Gateway Business Suite Enablement-Service
- D. TADIR INA1 - InA Service

Answer: C

Explanation:

For SAPUI5 Fiori apps, the front-end authorization object type is TADIR IWSV (SAP Gateway Business Suite Enablement-Service). This object type represents the OData services used by Fiori apps on the front-end server, and its authorization is managed via the S_SERVICE authorization object in PFCG roles. The IWSV type specifically defines the services that the front-end server calls to access back-end data, requiring start authorizations and default values to be included in the role. TADIR IWSG is used for service group metadata, not front-end authorizations, and TADIR G4BA pertains to OData V4 services, which are less common in standard SAPUI5 Fiori apps. TADIR INA1 is related to InA (Information Access) services, not typical Fiori app authorizations. By using IWSV, SAP ensures that front-end authorizations are correctly aligned with the OData services powering Fiori apps, providing secure and efficient access control in SAP S/4HANA systems.

NEW QUESTION # 29

Where can you find information on the SAP-delivered default authorization object and value assignments?

Note: There are 2correct answers to this question.

- A. SU22
- B. SU24
- C. USOBT
- D. USOBT_C

Answer: A,C

Explanation:

Information on SAP-delivered default authorization objects and their value assignments can be found in:

- * USOBT (B):
- * USOBT is a table that contains SAP's default check indicators and authorization object assignments for transactions.
- * It holds the relationships between transaction codes and the authorization objects checked during transaction execution.
- * SU22 (C):
- * Transaction SU22 displays the SAP default authorization data.
- * It allows administrators to view the standard authorization objects and field values that SAP assigns to transactions.

Note:

- * USOBT_C is the customer version of the USOBT table, containing customer-specific modifications.

However, for SAP-delivered defaults, USOBT is the correct source.

- * SU24 is used for maintaining customer-specific authorization data, not for viewing SAP defaults.

SAP Security References:

- * SAP Help Portal: Understanding Authorization Object Tables (USOBT and USOBT_C)
- * SAP Documentation: Using SU22 for Default Authorization Data
- * SAP Note: Managing Authorization Checks with SU22 and SU24

NEW QUESTION # 30

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2correct answers to this question.

- A. Employer
- B. Administrator
- C. User
- D. Employee

Answer: C,D

NEW QUESTION # 31

Which of the following services does the Identity Authentication Service provide? Note: There are 2correct answers to this question.

- A. Single Sign-On
- B. Central User Repository
- C. Policy refinement
- D. Authentication

Answer: A,D

Explanation:

* Context: Identity Authentication Service (IAS) supports secure user authentication and enables Single Sign-On (SSO) across systems.

* Solution Descriptions:

* Authentication: Verifies user credentials and identity.

* Single Sign-On (SSO): Allows seamless login across SAP and third-party systems without requiring multiple authentications.

SAP Security References:

- * SAP Identity Authentication Service (IAS) Guide

- * SAP SSO Configuration Documentation

NEW QUESTION # 32

Creativity is coming from the passion and love of knowledge. Every day there are many different new things turning up. So a wise and diligent person should absorb more knowledge when they are still young. At present, our C-SEC-2405 study prep has gained wide popularity among different age groups. Most of the real exam questions come from the adaption of our C-SEC-2405 test question. In fact, we get used to investigate the real test every year. The similarity between our study materials and official test is very amazing. In a word, your satisfaction and demands of the C-SEC-2405 Exam braindump is our long lasting pursuit.
