ServiceNow CAD (Certified Application Developer) Certification Exam is designed to test an individual's knowledge and expertise in developing applications on the ServiceNow platform.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q213-Q218):

NEW QUESTION # 213

Application developers configure ServiceNow using industry standard JavaScript to...

- A. Extend and add functionality
- B. Customize the organization's company logo and banner text
- C. Enable the right-click to edit the context menus on applications in the navigator
- D. Configure the outgoing email display name

Answer: A

Explanation:

Application developers configure ServiceNow using industry standard JavaScript to extend and add functionality. JavaScript is a scripting language that enables developers to create dynamic and interactive web pages, as well as manipulate data and logic on the server-side. ServiceNow provides various APIs and frameworks for developers to use JavaScript to customize and enhance the functionality of their applications, such as client scripts, UI policies, business rules, script includes, UI actions, and more. NEW QUESTION # 214

Which ATF Test step allows you to create a user with specified roles and groups for the test?

- A. Create a group
- B. Impersonation
- C. Create a user
- D. Create a role

Answer: C

Explanation:

The Automated Test Framework (ATF) is a tool that allows you to create and run automated tests on the ServiceNow platform. The ATF uses test steps to define the actions and validations for each test. The test step that allows you to create a user with specified roles and groups for the test is the Create a user test step. This test step creates a temporary user record that is deleted at the end of the test. You can specify the user name, password, roles, and groups for the user. You can also use the Impersonate a user test step to switch to the created user and perform actions as that user.

The other options are not valid test steps for creating a user. The Create a role and Create a group test steps do not exist in the ATF. To create a role or a group, you need to use the Create a record test step and specify the sys_user_role or sys_user_group table. The Impersonation test step does not create a user, but switches to an existing user.

NEW QUESTION # 215

How can an application link to a repository behind a firewall?

- A. Link an application to source control through an access token.
- B. Link an application to source control through a MID Server.
- C. Link an application to source control with multi-factor authentication.
- D. This option is not supported.

Answer: B

Explanation:

"Use an existing MID Server to connect to a Source Control repository. Linking or importing an application through a MID Server enables access to repositories behind a firewall." https://docs.servicenow.com/bundle/tokyo-application-development/page/build/applications/concept/c_SourceControlIntegration.html

NEW QUESTION # 216

Which methods can be used to install an application on a ServiceNow instance?
Choose 3 answers

- A. Install an application from the Application Repository
- B. Use the 'Install' button on the application record
- C. Import an application from an XML file
- D. Install from the Google Play Store
- E. Download from Stack Overflow
- F. Download and install a third-party application from the ServiceNow Store

Answer: A,C,F

Explanation:

ServiceNow provides several methods to install applications onto an instance, each suited to different scenarios:

* Import an Application from an XML File (Option A):

* Description: Developers can export an application as an XML file and then import it into another ServiceNow instance.

* Use Case: This method is commonly used for moving applications between instances, such as from development to production.

* Procedure:

* Navigate to "System Applications" > "Applications."

* Click on the "Import" button.

* Upload the XML file of the application.

NEW QUESTION # 217

Which one of the following is NOT a UI Action type?

- A. List choice
- B. Form choice
- C. List banner button
- D. Form button

Answer: B

Explanation:

A UI Action is a button, link, or choice that can be clicked by a user to perform an action, such as submitting a form or running a script. The following are UI Action types:

* List choice. This is a UI Action that appears as a choice list on a list of records. It can be used to perform an action on multiple records at once, such as deleting or updating them.

* Form button. This is a UI Action that appears as a button on a form. It can be used to perform an action on the current record, such as saving or approving it.

* List banner button. This is a UI Action that appears as a button on the banner of a list of records. It can be used to perform an action on the entire list, such as exporting or printing it.

The following is not a UI Action type:

* Form choice. This is not a UI Action type, but a field type. A form choice is a field that displays a choice list on a form. It can be used to select a value from a predefined set of options, such as priority or state. References: UI Actions, Field Types Reference: https://docs.servicenow.com/bundle/orlando-platform-administration/page/administer/list-administration/task/t_EditingAUIAction.html
