In order to let you have a deep understanding of our CCSK learning guide, our company designed the trial version for our customers. We will provide you with the trial version of our CCSK study materials before you buy our products. If you want to know our CCSK Training Materials, you can download the trial version from the web page of our company. It is easy and fast to download the free trial version of our CCSK exam braindumps.

The CCSK certification exam is based on the CSA Security Guidance for Critical Areas of Focus in Cloud Computing, which is a comprehensive framework for securing cloud environments. The guidance covers 16 domains, including cloud architecture, governance, compliance, encryption, and incident response. The CCSK certification exam tests candidates' knowledge of these domains and their ability to apply the guidance to real-world scenarios.

The CCSK Exam consists of 60 multiple-choice questions and is delivered online. CCSK exam covers various topics related to cloud security, including cloud architecture, data security, identity and access management, compliance, legal and contractual issues, and virtualization security. CCSK exam is open to anyone who is interested in cloud security, regardless of their experience or background.

Our Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) practice exam simulator mirrors the Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) exam experience, so you know what to anticipate on Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) certification exam day. Our Cloud Security Alliance CCSK Practice Test software features various question styles and levels, so you can customize your Cloud Security Alliance CCSK exam questions preparation to meet your needs.

Cloud Security Alliance CCSK (Certificate of Cloud Security Knowledge) Exam is a globally recognized certification that validates the knowledge and skills of professionals in cloud security. It is designed to provide a comprehensive understanding of cloud security concepts, architecture, governance, compliance, and operations. The CCSK Exam is vendor-neutral, which means that it covers cloud security best practices regardless of the cloud service provider.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q136-Q141):

NEW QUESTION # 136

What is the primary purpose of implementing a systematic data/asset classification and catalog system in cloud environments?

- A. To apply appropriate security controls based on asset sensitivity and importance
- B. To increase the speed of data retrieval within the cloud environment
- C. To reduce the overall cost of cloud storage solutions
- D. To automate the data encryption process across all cloud services

Answer: A

Explanation:

Classification and cataloging help assign security controls and manage data based on its sensitivity and criticality. Reference: [CCSK v5 Curriculum, Domain 9 - Data Security]

NEW QUESTION # 137

What is the newer application development methodology and philosophy focused on automation of application development and deployment?

- A. Scrum
- B. **DevOps**
- C. SecDevOps
- D. Agile
- E. BusOps

Answer: B

NEW QUESTION # 138

Inability to provide enough capacity to the cloud customer can lead to which of the following risk:

- A. Data Dispersion
- B. Resource Utilization
- C. **Resource Exhaustion**
- D. Data Breach

Answer: C

Explanation:

Cloud services are on-demand. Therefore there is a level of calculated risk in allocating all the resources of a cloud service, because resources are allocated according to statistical projections. In accurate modelling of resources usage common resources allocation algorithms are vulnerable to distortions of fairness or inadequate resource provisioning and inadequate investments in infrastructure.

NEW QUESTION # 139

What is the primary function of Privileged Identity Management (PIM) and Privileged Access Management (PAM)?

- A. Encrypt data transmitted over the network
- B. **Manage the risk of elevated permissions**
- C. Monitor network traffic and detect intrusions
- D. Ensure system uptime and reliability

Answer: B

Explanation:

The primary function of Privileged Identity Management (PIM) and Privileged Access Management (PAM) is to manage the risk of elevated permissions. These systems are designed to control and monitor access to sensitive resources and actions by users with elevated or privileged access rights, such as administrators. By managing these privileged accounts and ensuring they are granted only when necessary, for the least amount of time, and with appropriate oversight, organizations reduce the risk of misuse or abuse of these powerful permissions.

This helps protect critical systems and sensitive data from being compromised by unauthorized access, which is especially important for maintaining the security of IT environments.

NEW QUESTION # 140

Which of the below hypervisors are OS based and are more attractive to attackers?

- A. Type I
- B. Type II
- C. Type III
- D. Type V

Answer: B

Explanation:

Type II hypervisors are OS-based and more attractive to attackers. There are lot of vulnerabilities which are found not only on OS but also in applications residing on the OS.
