

Latest 1z0-1093-25 Exam Testking & 1z0-1093-25 Valid Dumps Ppt

BONUS!!! Download part of TopExamCollection 1z0-1093-25 dumps for free: <https://drive.google.com/open?id=1EmxwKRb0JIYDbC4kGdJnd2rC74Ulahic>

You will notice the above features in the Oracle 1z0-1093-25 Web-based format too. But the difference is that it is suitable for all operating systems: Macs, Linux, iOS, Androids, and Windows. There is no need to go through time-taking installations or agitating plugins to use this format. It will lead to your convenience while preparing for the Oracle 1z0-1093-25 Certification test. Above all, it operates on all browsers: Mozilla, Safari, Opera, Google Chrome, and Internet Explorer.

Never have we made our customers disappointed about our 1z0-1093-25 study guide. So we have enjoyed good reputation in the market for about ten years. In the future, we will stay integrity and research more useful 1z0-1093-25 learning materials for our customers. Please continue supporting our 1z0-1093-25 Exam Questions and we will make a better job with your warm encourages and suggestions. So if you have any opinions about our 1z0-1093-25 learning quiz, just leave them for us.

2026 Latest 100% Free 1z0-1093-25 – 100% Free Latest Exam Testking | Oracle Cloud Database Services 2025 Professional Valid Dumps Ppt

The Oracle Cloud Database Services 2025 Professional exam is one of the most valuable certification exams. The Oracle Cloud Database Services 2025 Professional exam opens a door for beginners or experienced TopExamCollection professionals to enhance in-demand skills and gain knowledge. 1z0-1093-25 Exam credential is proof of candidates' expertise and knowledge. After getting success in the Oracle Cloud Database Services 2025 Professional exam, candidates can put their careers on the fast route and achieve their goals in a short period of time.

Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.
Topic 2	<ul style="list-style-type: none">MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.

Topic 3	<ul style="list-style-type: none"> Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.
Topic 4	<ul style="list-style-type: none"> NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.
Topic 5	<ul style="list-style-type: none"> Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.

Oracle Cloud Database Services 2025 Professional Sample Questions (Q39-Q44):

NEW QUESTION # 39

Within the context of Oracle Cloud Infrastructure (OCI) Base Database Service (BaseDB) virtual machine (VM) provisioning, which action is typically the RESPONSIBILITY of the customer?

- A. Maintaining the OCI hypervisor software.
- B. Managing the Oracle Grid Infrastructure software stack.
- C. Ensuring the underlying hardware infrastructure remains fault-tolerant.
- D. Automatically applying critical security patches to the operating system.

Answer: B

Explanation:

B: Managing the Oracle Grid Infrastructure software stack:

* Customers are responsible for the installation, configuration, and maintenance of the Oracle Grid Infrastructure when using BaseDB VMs.

* This includes managing Oracle Clusterware and Automatic Storage Management (ASM) if applicable.

* Ensuring the Grid Infrastructure's availability and performance is part of customer-managed tasks.

Why the other options are incorrect:

* A. Hardware fault tolerance: Managed by Oracle Cloud Infrastructure.

* C. Hypervisor maintenance: Handled by Oracle as part of the OCI infrastructure.

* D. Security patching: While OCI provides tools, the responsibility for OS patching lies with the customer.

NEW QUESTION # 40

When provisioning a Base Database Service (BaseDB) virtual machine (VM) instance in Oracle Cloud Infrastructure (OCI), which of the following actions MUST be performed before launching the DB system?

- A. Configuring the Data Guard association between the VM and a standby database.
- B. Creating a backup policy for the database being provisioned.
- C. Configuring Oracle GoldenGate replication.
- D. Creating a Virtual Cloud Network (VCN) with appropriate subnets and security rules.

Answer: D

Explanation:

VCN Requirement:

A Virtual Cloud Network (VCN) is essential for creating a BaseDB VM instance because it provides network connectivity and IP addressing. Subnets and security rules define the access policies and network segmentation.

Without a VCN, the VM instance cannot communicate with other resources or external networks.

Why the other options are incorrect:

- * A: Data Guard can be configured after provisioning.
- * B: Backup policies are important but can be set up later.
- * D: Oracle GoldenGate replication is optional and not required at the time of provisioning.

NEW QUESTION # 41

You are responsible for managing the storage configuration of an Exadata Database Service (ExaDB). You need to use the cellcli utility to modify the IORM (I/O Resource Management) settings to prioritize critical database workloads. Specifically, you want to adjust the share allocation for a specific database. Which cellcli command will accomplish this?

- **A. cellcli alter iormplan database dbname shares=value**
- B. cellcli change iormplan database dbname shares=value
- C. cellcli modify iormplan database dbname shares=value
- D. cellcli configure iormplan database dbname shares=value

Answer: A

Explanation:

A: cellcli alter iormplan database dbname shares=value

CellCLI Utility:

- * cellcli is a command-line interface used to manage Exadata storage cells.
- * The alter command is used to modify existing configurations, including IORM plans.
- * IORM (I/O Resource Management):
- * Helps control how I/O resources are allocated among databases.
- * The shares parameter adjusts the relative priority of I/O requests.
- * Correct syntax for adjusting IORM:

bash

CopyEdit

```
cellcli -e "alter iormplan database dbname shares=value"
```

Why the other options are incorrect:

- * B. configure iormplan: Used for creating or setting up new IORM plans, not for modification.
- * C. modify iormplan: modify is not a valid command in CellCLI for IORM.
- * D. change iormplan: No such command exists in CellCLI.

NEW QUESTION # 42

A critical query running on your HeatWave cluster is experiencing significant performance degradation. Which tool or service should you use to identify and analyze the specific query causing the bottleneck?

- A. OCI Network Visualizer for analyzing network latency.
- B. OCI Bastion for secure access to the query execution environment.
- C. OCI Events for tracking query start and end times.
- **D. MySQL Slow Query Log and OCI Logging Analytics.**
- E. OCI Vault for auditing query execution.

Answer: D

Explanation:

MySQL Slow Query Log

The MySQL Slow Query Log records queries that exceed a specified execution time threshold. It is essential for identifying long-running queries that may be causing performance bottlenecks.

OCI Logging Analytics:

By integrating the slow query log with OCI Logging Analytics, users can visualize query performance patterns, generate alerts, and identify the root cause of slow performance. This combination is powerful for detecting and addressing query-specific issues.

Why the other options are incorrect:

- * A: OCI Vault is used for managing encryption keys, not query performance.
- * B: OCI Events track general occurrences, not detailed query performance.
- * D: Network latency analysis is useful but not directly related to query analysis.
- * E: OCI Bastion provides secure access, not performance analytics.

NEW QUESTION # 43

Which of the following is a TRUE statement regarding the storage options typically available when launching an Oracle Cloud Infrastructure (OCI) Base Database Service (BaseDB) virtual machine (VM)?

- A. Object Storage is the default storage option for database datafiles.
- **B. Block Volumes provide the primary storage and are directly attached to the VM.**
- C. File Storage is mandatory for database backups.
- D. Local NVMe storage is always the default for BaseDB.

Answer: B

Explanation:

A: Block Volumes provide the primary storage and are directly attached to the VM.

Block Volumes:

- * These are persistent, durable block storage volumes that are attached to the VM instance.
- * Used to store database datafiles, redo logs, and other database-related files.
- * Standard and most common way to provision storage for BaseDB VMs.

Why the other options are incorrect:

* B. Object Storage as the default for database datafiles: Object Storage is used for backups and unstructured data, not the primary database files.

* C. Local NVMe as the default: Local NVMe provides high performance but is not always the default.

Block Volumes are standard.

* D. File Storage is mandatory for backups: Not mandatory. Block Volumes or Object Storage can also be used.

NEW QUESTION # 44

.....

As long as you study with our 1z0-1093-25 training braindumps, you will find that our 1z0-1093-25 learning quiz is not famous for nothing but for its unique advantages. The 1z0-1093-25 exam questions and answers are rich with information and are easy to remember due to their simple English and real exam simulations and graphs. So many customers praised that our 1z0-1093-25 preparation guide is well-written. With our 1z0-1093-25 learning engine, you are success guaranteed!
