SAP C_SIGVT_2506 考試大綱：

主題	簡介
主題 1	Exploring the SAP Business Transformation Methodology: This section of the exam measures the skills of Transformation Consultants and introduces SAP structured methodology for guiding organizations through transformation programs. It covers the stages, principles, and frameworks used to support business evolution, ensuring candidates understand how SAP's methodology enables structured planning, execution, and adoption across transformation lifecycles.
主題 2	Exploring SAP Cloud Strategy: This section of the exam measures the skills of Cloud Strategy Analysts and focuses on SAP overall cloud vision, deployment models, and strategic direction. It includes understanding the value of cloud adoption, SAP portfolio of cloud solutions, and how organizations benefit from modern cloud architectures. The section validates foundational knowledge of SAP cloud ecosystem and its relevance to transformation.

主題 3	Validating Business Processes with SAP Signavio: This section of the exam measures the skills of Business Process Analysts and covers the use of SAP Signavio to evaluate, analyze, and validate business processes during transformation projects. It focuses on understanding how process insights support decision-making and how Signavio helps identify gaps between current operations and desired outcomes. The section ensures candidates can apply Signavio tools to support business process optimization.
主題 4	Using LeanIX for Enterprise Architecture Validation: This section of the exam measures the abilities of Enterprise Architects and focuses on using LeanIX to validate architecture landscapes. It includes understanding how LeanIX maps applications, data, and business capabilities to support modernization efforts. The domain emphasizes validating architecture readiness and ensuring that the existing IT landscape aligns with transformation goals.
主題 5	Monitoring Transformation Progress using SAP Cloud ALM: This section of the exam measures the capabilities of Cloud ALM Specialists and covers the use of SAP Cloud ALM to track project progress and operational performance. It explains how Cloud ALM supports implementation tasks, monitors system health, and provides visibility into key milestones. Candidates learn how to use the platform to support continuous governance and ensure transformation activities remain on track.

問題 #27

Which of the following are dimensions of the clean core concept?

(3 correct answers)

- A. Applications
- B. Integrations
- C. Processes
- D. Configurations
- E. Operations

答案: B,C,D

解題說明:

The clean core concept is fundamental to SAP's cloud strategy and governs how organizations should structure their ERP systems to remain flexible, upgradeable, and stable. One key dimension is Configurations

, which must follow SAP-recommended patterns and avoid unnecessary customizations that compromise upgradeability.

Configurations define how the system behaves, and keeping them standardized ensures that the core can remain clean.

A second dimension is Integrations. Clean core principles emphasize using SAP-approved integration patterns, APIs, and event-driven models rather than modifying the underlying system. By handling extensions and integrations through platforms like SAP Business Technology Platform, organizations avoid invasive changes that would otherwise jeopardize upgrades or system stability.

A third dimension is Processes, referring to the ability to adopt SAP's standard end-to-end processes wherever possible. Aligning with SAP best practices minimizes the need for enhancements in the core system and ensures compatibility with future innovations.

Applications and operations are not part of the formal clean core dimensions; rather, they are broader parts of the overall IT landscape. The clean core dimensions focus specifically on system configuration, integration behavior, and business process alignment—ensuring that SAP systems remain cloud-ready and agile.

問題 #28

What does SAP LeanIX use to represent applications and capabilities?

- A. Linked Lists
- B. Forms
- C. Fact Sheets
- D. Survey Database

答案: C

解題說明:

Fact Sheets are the core building blocks in SAP LeanIX. Each Fact Sheet holds information about a specific entity, such as an

application, business capability, interface, or technology component. These structured profiles include lifecycle data, ownership, dependencies, and relationships. Using Fact Sheets ensures a standardized representation of architectural components, enabling transparency and accurate transformation planning.

問題 #29

What component enables application development and integration in the toolchain?

- A. SAP Business Technology Platform and SAP Build
- B. SAP HANA Studio
- C. SAP GUI
- D. SAP S/4HANA

答案： A

解題說明：

SAP Business Technology Platform (BTP), together with SAP Build, provides the infrastructure for creating extensions, integrations, and custom applications while preserving a clean core. BTP includes integration services, event-driven architecture, workflow automation, and low-code/no-code tools. This enables customers to extend SAP S/4HANA without modifying the core system. The other tools do not serve as the primary integration or extension platform in modern cloud transformation.

問題 #30

What ensures that architecture documentation is aligned with business capability goals?

- A. Capability Mapping
- B. Fact Sheet Owners
- C. Lifecycle Milestones
- D. RACI Grid Builder

答案： A

問題 #31

Which of the following are strategies used in the Design phase to enable effective business process transformation with SAP Signavio? Note: There are 3 correct answers to this question.

- A. Using best practice content
- B. Process Performance benchmarking
- C. Value discovery
- D. Involving the stakeholders
- E. Collaborating with IT

答案： A,C,D
