## Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Question:

What is the first step in a machine learning process?

- A. Selecting the type of learning
- B. Training the model
- **C. Collecting the datasets**
- D. Analyzing the data

**Answer: C**

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets:Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data:Cleaning and exploring data for patterns.

3##Selecting learning type:Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model:Using the data to build predictive models.

### NEW QUESTION # 47

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- A. Ethernet frame segmentation
- **B. IP packet segmentation**
- C. FCIP gateway FC ports set to TE\_Port mode
- D. FCIP gateway FC ports set to EX\_Port mode

**Answer: B**

Explanation:

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

\* TE\_Port mode is used for trunking, not related to packet fragmentation.

\* EX\_Port mode is used for inter-switch connectivity (FCR).

\* Ethernet frame segmentation is not relevant in FCIP tunneling.

### NEW QUESTION # 48

Question:

What is the role of the storage node in a backup architecture?

- A. To monitor the health of the backup infrastructure
- B. To perform data deduplication and compression
- **C. To organize and write data to the backup device**
- D. To manage the backup

**Answer: C**

Explanation:

A storage node is a component in a backup architecture that handles the actual data movement during the backup process:

It organizes the backup data stream.

It writes the data to the backup target (disk, tape, or cloud).

It does not manage policies or schedules (that's the role of the backup server or management console).

\* Option A: Monitoring is done by the backup server or management tools.

\* Option C: Backup management (scheduling, policies) is also handled by the backup server.

\* Option D: Deduplication may be part of the process but is not the primary role of a storage node.

#### NEW QUESTION # 49

Question:

What is true about the FCIP?

- A. Connects local iSCSI SANs to remote FC SANs
- B. Connects local iSCSI SANs to remote iSCSI SANs
- **C. Connects local FC SANs to remote FC SANs**
- D. Connects local FC or iSCSI SANs to remote FC or iSCSI SANs

**Answer: C**

Explanation:

FCIP (Fibre Channel over IP) is used to tunnel Fibre Channel traffic over IP networks. Its primary use case:

\* Connecting local FC SANs to remote FC SANs for disaster recovery and remote data replication.

\* It encapsulates FC frames into IP packets, transporting them over existing IP infrastructure.

\* Option B/C/D: iSCSI is not directly involved in FCIP's primary function.

#### NEW QUESTION # 50

Question:

What is the main advantage of 5G technology over previous generations of mobile networks?

- **A. Increased speed and capacity**
- B. Increased bandwidth
- C. Lower cost
- D. Reduced distance

**Answer: A**

Explanation:

5G represents the fifth generation of mobile networks and offers several significant advantages over 4G, 3G, and earlier generations:

\* Increased speed: 5G delivers data speeds up to 100 times faster than 4G LTE.

\* Enhanced capacity: Supports more devices per square kilometer, crucial for IoT and smart cities.

\* Low latency: Reduces delay in data transmission, enabling real-time applications like remote surgeries or autonomous vehicles.

\* Increased bandwidth (Option B) is part of the overall increased capacity.

\* Reduced distance (Option C) is incorrect; 5G uses shorter wavelengths, meaning shorter range.

\* Lower cost (Option D) is not a key advantage of 5G technology itself.
