In this HTTP/1 1-comphanl web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 2xx

- B. 4xx
- C. 3xx
- D. 5xx

Answer: A

NEW QUESTION # 23

An IT integration team followed an API-led connectivity approach to implement an order-fulfillment business process It created an order processing API that coordinates stateful interactions with a variety of microservices that validate, create and fulfill new product orders.

Which interaction composition pattern did the integration architect who designed this order processing API use?

- A. Aggregation
- B. Orchestration
- C. Streaming
- D. Multicasting

Answer: B

Explanation:

In an API-led connectivity approach, different APIs are layered to provide modular and reusable services. For an order processing API that coordinates stateful interactions with various microservices, the integration architect used the orchestration interaction composition pattern. Here's a step-by-step explanation:

* Understanding Orchestration:

* Definition: Orchestration involves coordinating multiple services to achieve a complex business workflow. Unlike choreography, which relies on each service knowing its part, orchestration uses a central controller to manage the interactions.

* Role of the Orchestrator: The orchestrator manages the execution sequence, handles the state, and ensures all the necessary steps are completed successfully.

* Order Processing API:

* API-Led Connectivity: An order processing API, following API-led connectivity, sits in the Process layer, handling complex business processes and logic.

* Stateful Interactions: Orchestration is particularly suitable for stateful interactions where the process needs to remember the state between steps, such as validating an order, creating it, and fulfilling it.

* Implementation Steps:

* Microservices Interaction: The order processing API interacts with various microservices:

* Validation Microservice: Checks the validity of the order details.

* Creation Microservice: Creates the order in the system.

* Fulfillment Microservice: Manages the order fulfillment process.

* Coordination: The API orchestrates these steps, ensuring each one completes successfully before moving to the next, handling exceptions, and maintaining the state of the process.

NEW QUESTION # 24

What is a defining characteristic of an Integration-Platform-as-a-Service (iPaaS)?

- A. On-premises
- B. No-code
- C. Cloud-based
- D. Code-first

Answer: C

Explanation:

An Integration-Platform-as-a-Service (iPaaS) is characterized by being a cloud-based solution that provides tools to develop, execute, and manage integration flows connecting multiple applications and data sources.

Here's a detailed explanation:

* iPaaS:

* Definition: A suite of cloud services enabling the development, execution, and governance of integration flows.
* Deployment: Delivered and managed entirely in the cloud, offering high availability and scalability.
* Characteristics:
* Cloud-based: The platform is hosted on the cloud, allowing users to access and utilize the integration tools from anywhere with an internet connection.
* Managed Services: iPaaS providers handle infrastructure maintenance, updates, and security, freeing users to focus on integration development.
* Scalability: Easily scales to meet the demands of growing businesses without requiring additional on-premises infrastructure.

NEW QUESTION # 25

According to MuleSoft a synchronous invocation of a RESTful API using HTTP to gel an individual customer record from a single system is an example of which system integration interaction pattern?

- A. One-way
- B. Batch
- C. Multicast
- D. Request-Reply

Answer: D

Explanation:
In system integration, different interaction patterns are used depending on the communication requirements between systems. For a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system, the Request-Reply pattern is used. Here's a detailed explanation:
* Request-Reply Pattern:
* Definition: This pattern involves a client sending a request to a server and waiting for a reply. The communication is synchronous, meaning the client waits for the server to process the request and send back the response.
* Typical Use Case: It is used when immediate feedback is required from the server, such as retrieving a specific customer record.
* RESTful API and HTTP:
* Synchronous Communication: HTTP is inherently synchronous, making it suitable for Request-Reply interactions where the client expects an immediate response.
* Data Retrieval: Commonly used for GET requests in RESTful APIs to retrieve data from a server.
* Example:
* Scenario: A client application requests customer details by making a GET request to a RESTful API endpoint. The server processes the request and returns the customer record.

NEW QUESTION # 26

CloudHub is an example of which cloud computing service model?

- A. Platform as a Service (PaaS)
- B. Monitoring as a Service (MaaS)
- C. Software as a Service (SaaS)
- D. Infrastructure as a Service (laaS)

Answer: A

Explanation:
CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:
* Platform as a Service (PaaS):
* Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.
* CloudHub Features:

* Deployment: Simplifies the deployment of Mule applications to the cloud.
* Management: Provides tools for managing application performance, scaling, and monitoring.
* Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.
* Benefits:
* Scalability: Automatically scales applications based on demand.
* Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.
* Security: Provides robust security features to protect data and applications.
