Salesforce Certified MuleSoft Developer II Sample Questions (Q10-Q15):

NEW QUESTION # 10

A Mule application defines as SSL/TLS keystore properly 'tis,keystore.keyPassword' as secure. How can this property be referenced to access its value within the application?

- A. `#{secure::tiskeystore,keyPassowrd}`
- B. `# {secure::tiskeystore,keyPassowrd}`
- C. `p {secure::tiskeystore,keyPassowrd}`
- D. `$ {secure::tiskeystore,keyPassowrd}`

Answer: A

Explanation:

`secure::tiskeystore,keyPassowrd`**ShortExplanationofCorrectAnswerOnly:Toreferenceasecurepropertyvaluewithintheplication,the developer needstouse the syntax `{secure::}`. In this case, the property name is `tiskeystore,keyPassowrd`, so the correct syntax is `#{secure::tiskeystore,keyPassowrd}`. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/secure-configuration-properties#referencing-secure-properties>

NEW QUESTION # 11

A developer deploys an API to CloudHub and applies an OAuth policy on API Manager. During testing, the API response is slow, so the developer reconfigures the API so that the out-of-the-box HTTP Caching policy is applied first, and the OAuth API policy is applied second. What will happen when an HTTP request is received?

- A. In case of a cache hit, both the OAuth and HTTP Caching policies are evaluated; then the cached response is returned to the caller
- B. In case of a cache miss, both the OAuth and HTTP Caching policies are evaluated; then the API retrieves the data from the API implementation, and the policy does not store the data in Object Store
- C. In case of a cache miss, only the HTTP Caching policy is evaluated; then the API retrieves the data from the API implementation, and the policy stores the data to be cached in Object Store

- D. In case of a cache hit, only the HTTP Caching policy is evaluating; then the cached response is returned to the caller

Answer: D

Explanation:

When an HTTP request is received and the HTTP Caching policy is applied first, it checks if there is a cached response for that request in Object Store. If there is a cache hit, meaning that a valid cached response exists, then only the HTTP Caching policy is evaluated and the cached response is returned to the caller without invoking the OAuth policy or the API implementation. If there is a cache miss, meaning that no valid cached response exists, then both the HTTP Caching policy and the OAuth policy are evaluated before invoking the API implementation. What required changes can be made to give a partial successful response in case the United Airlines API returns with a timeout?

- A. Add a Scatter-gather component inside a Try scope.
Set the payload to a default value 'Error' inside the error handler using the On Error Propagate scope.
- B. Add a Scatter-Gather component inside a Try scope.
Set the payload to a default value 'Error' inside the error handler using the On Error Continue scope.
- C. Add Flow Reference components inside a Try scope
Set the payload to a default value " inside the error handler using the On Error Propagate scope
- D. Add Flow Reference components inside a Try scope.
Set the payload to a default value" insider the error handler using the ON Error Continue scope

Answer: B

Explanation:

To give a partial successful response in case the United Airlines API returns with a timeout, the developer should add a Scatter-Gather component inside a Try scope, and set the payload to a default value 'Error' inside the error handler using the On Error Continue scope. A Scatter-Gather component allows sending multiple requests concurrently and aggregating the responses into an array. A Try scope allows handling errors that occur within it using an error handler. An On Error Continue scope allows continuing the flow execution after handling an error. Therefore, by using these components, the developer can send requests to both APIs in parallel, handle any timeout errors from United Airlines API, and return a partial response with a default value for that API. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/try-scope-concept> <https://docs.mulesoft.com/mule-runtime/4.3/on-error-continue-concept>

NEW QUESTION # 13

A healthcare customer wants to use hospital system data, which includes code that was developed using legacy tools and methods. The customer has created reusable Java libraries in order to read the data from the system.

What is the most effective way to develop an API retrieve the data from the hospital system?

- A. Refer to JAR files in the code
- B. Install libraries in a local repository and refer to it in the pom.xml file
- C. Create the Java code in your project and invoice the data from the code
- D. Include the libraries writes deploying the code into the runtime

Answer: B

Explanation:

To develop an API that retrieves data from a hospital system using reusable Java libraries, the developer should install libraries in a local repository and refer to it in the pom.xml file. This way, the developer can use Maven to manage dependencies and invoke Java code from Mule applications using Java Module operations. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/java-module-reference#add-the-java-module-to-your-project> <https://docs.mulesoft.com/mule-runtime/4.3/java-module-reference#invoke-java-code>

NEW QUESTION # 14

Refer to the exhibit.

What action must be performed to log all the errors raised by the VM Connector?

- A. Add `<AsyncLogger name='org.groute.extensions.vml level=ERROR!>` inside the Logger tag
- B. Configure `<Logger level='ERROR!>` inside the VM Connector configuration
- C. Add `<AsyncLogger name='org.groute.extensions.vml level=ERROR!>` inside the Appenders tag
- D. Nothing, as error-level events are automatically logged

Answer: C

Explanation:

To log all the errors raised by the VM Connector, the developer needs to add an async logger with the name 'org.mule.extension.vml' and the level 'ERROR' inside the appenders tag of the log4j2.xml file. This will enable logging all error-level events generated by the VM Connector to the console appender. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/logging-in-mule#configuring-custom-logging-settings>
