CV0-004 Test Guide - Free CV0-004 Sample

After years of hard work, our CV0-004 learning materials can take the leading position in the market. Our highly efficient operating system for learning materials has won the praise of many customers. If you are determined to purchase our CV0-004 learning materials, we can assure you that you can receive an email from our efficient system within 5 to 10 minutes after your payment, which means that you do not need to wait a long time to experience our learning materials. Then you can start learning our CV0-004 Learning Materials in preparation for the exam.

CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

A company's main web application is no longer accessible via the internet. The cloud administrator investigates and discovers the application is accessible locally and only via an IP access. Which of the following was misconfigured?

- A. NAT
- B. IP
- C. DNS
- D. DHCP

Answer: C

Explanation:

When a web application is accessible locally via an IP address but not via the internet, the issue likely lies with the Domain Name System (DNS). DNS is responsible for translating domain names into IP addresses. A misconfiguration in DNS records or failure in DNS resolution can prevent users from accessing the application through its domain name, even though the application itself is running and accessible via its direct IP address.

NEW QUESTION # 64

An organization needs to retain its data for compliance reasons but only when required. Which of the following would be the most cost-effective type of tiered storage?

- A. Hot
- **B. Archive**
- C. Warm
- D. Cold

Answer: B

Explanation:

Archive storage is the most cost-effective type of tiered storage for retaining data that is infrequently accessed and only when required for compliance reasons. It is designed for long-term storage and offers lower storage costs compared to hot, cold, or warm storage tiers.

Understanding data storage and the various tiers, including archival storage, is part of cloud storage strategies covered in the CompTIA Cloud+ certification.

NEW QUESTION # 65

A company has ten cloud engineers working on different manual following is the best method to address this issue?

- A. Deployment documentation
- **B. Configuration as code**
- C. Change ticketing
- D. Service logging

Answer: B

Explanation:

Configuration as code is the best method to address the issue of cloud engineers working on different manual configurations. This practice allows configurations to be scripted and automated, which reduces human error, enhances consistency, and makes the deployment process more efficient and reproducible.

Configuration as code is part of cloud deployment best practices, ensuring standardized environments, which is a key topic within the CompTIA Cloud+ curriculum.

NEW QUESTION # 66

A cloud deployment uses three different VPCs. The subnets on each VPC need to communicate with the others over private channels. Which of the following will achieve this objective?

- A. Deploying a load balancer to send traffic to the private IP addresses
- B. Adding BGP routes using the VPCs' private IP addresses
- **C. Creating peering connections between all VPCs**
- D. Establishing identical routing tables on all VPCs

Answer: C

Explanation:

To allow subnets on different VPCs to communicate with each other over private channels, the cloud engineer should create peering connections between all the VPCs. VPC Peering allows networks to connect and route traffic using private IP addresses without the need for gateways, VPN connections, or separate physical hardware. Reference: CompTIA Cloud+ Study Guide (Exam CV0-004) by Todd Montgomery and Stephen Olson

NEW QUESTION # 67

An organization's security policy states that software applications should not exchange sensitive data in cleartext. The security analyst is concerned about a software application that uses Base64 to encode credit card data. Which of the following would be the best algorithm to replace Base64?

- A. AES
- B. SHA-3
- C. 3DES
- D. RC4

Answer: A

Explanation:

AES (Advanced Encryption Standard) is the best algorithm to replace Base64 for secure data exchange.

Base64 is an encoding method that is not secure by itself, as it's easily reversible. AES, on the other hand, is a widely used encryption standard that ensures data is protected and is not readable without the correct encryption key. References: Encryption standards and practices, including the use of AES for securing data, are essential knowledge in cloud security covered in CompTIA Cloud+.

NEW QUESTION # 68

.....

Our CV0-004 exam materials can lead you the best and the fastest way to reach for the certification and achieve your desired higher salary by getting a more important position in the company. Because we hold the tenet that low quality of the CV0-004 Study Guide may bring discredit on the company. Our CV0-004 learning questions are undeniable excellent products full of benefits, so our exam materials can spruce up our own image.
