NEW QUESTION # 75

A data architect is asked to create an XDM Individual Profile class-based schema from the relational data model seen in the attached exhibit. From what the architect is told, the business has collected and stored the history of all home addresses (could be hundreds) used by a customer since the beginning. All addresses have a type of home but only a single address has the primary indicator flag set. The marketing team needs to be able to utilize this data for both audience/segment creation and in personalization. Given the above relational model, what is the best way to translate this into a single schema?

Customer®
