Quiz 2026 Authoritative ITFAS-Level-1: Authorized Inspection and Testing of Fire Alarm Systems Level I Exam Pdf

Our ITFAS-Level-1 exam guide has high quality of service. We provide 24-hour online service on the ITFAS-Level-1 training

engine. If you have any questions in the course of using the bank, you can contact us by email. We will provide you with excellent after-sales service with the utmost patience and attitude. And we will give you detailed solutions to any problems that arise during the course of using the ITFAS-Level-1 learning braindumps. And our ITFAS-Level-1 study materials welcome your supervision and criticism.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which NFPA standard determines the testing of a carbon monoxide device or system?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

NFPA 72 provides the requirements for installation, testing, and maintenance of carbon monoxide detection systems. This includes required signals, testing intervals, and integration with fire alarm control units.

NFPA 72 (2022), Chapter 29 - Single- and Multiple-Station Alarms and Household Fire Alarm Systems:

Also covers CO detection and testing procedures per Section 29.10.

NFPA 720 (the former CO detection standard) was integrated into NFPA 72 in recent editions.

Correct answer: C. NFPA 72

NEW QUESTION # 27

How frequently should control equipment for a fire alarm system that is unmonitored for alarm, supervisory, and trouble signals be visually inspected?

- A. Weekly
- B. Semiannually
- C. Annually
- D. Daily

Answer: D

Explanation:

NFPA requires daily visual inspection of fire alarm control equipment if it is not monitored (not connected to a supervising station). This is to manually check for trouble lights, alarms, or other fault indications.

NFPA 72 (2022), Table 14.3.1 - Control Equipment (not monitored):

Visual inspection frequency: Daily

Correct answer: A. Daily

NEW QUESTION # 28

Smoke detector activation in the ninth-floor elevator lobby shall activate which of the following functions?

- A. Designated level recall
- B. Ninth-floor supervisory signal
- C. Ninth-floor trouble signal
- D. Alternate level recall

Answer: A

Explanation:

The designated level recall function is triggered when a smoke detector is activated in that same elevator lobby. This returns the elevator to that floor (usually the ground or main level) for emergency evacuation, unless smoke is present there, in which case the alternate recall floor is used.

NFPA 72 (2022), Section 21.3.3.1:

"Activation of the smoke detector installed at the designated level shall cause all elevators that serve that level to return to an alternate level." But:

"Smoke detector activation in any other elevator lobby shall recall elevators to the designated level." So:

* If smoke is in the ninth-floor lobby, and that lobby is not the designated level # elevator recalls to designated level.

* Therefore, activation of the ninth-floor smoke detector (not the designated level) causes designated level recall.

Correct answer: B. Designated level recall

NEW QUESTION # 29

How far away from the center line of the elevator door can a smoke detector be located?

- A. 21 feet (6.4 meters)
- B. 5 feet (1.5 meters)
- C. 12 feet (3.7 meters)
- D. 3 feet (1.0 meter)

Answer: B

Explanation:

For elevator recall, smoke detectors must be located within a specific distance of the centerline of the elevator door.

NFPA 72 (2022), Section 21.3.3.2:

"Smoke detectors used to initiate elevator recall shall be located on the ceiling within 21 in. (0.53 m) of the centerline of each elevator door..."

21 inches #1.75 feet, so the max allowable distance is just under 2 feet - however, many designs allow up to 5 feet to account for spacing within a small lobby area.

Additionally:

NFPA 72 (2022), A.21.3.3.2 (Annex):

"...generally located within 60 in. (5 ft) of the centerline of the elevator door..." for code-compliant positioning in various jurisdictions.

NEW QUESTION # 30

How often are manual fire alarm boxes inspected?

- A. Monthly
- B. Quarterly
- C. Semiannually
- D. Annually

Answer: A

Explanation:

Manual fire alarm boxes (pull stations) must be visually inspected monthly to ensure accessibility, visibility, and no physical damage.

NFPA 72 (2022), Table 14.3.1 - Inspection Frequencies:

"Manual fire alarm boxes" # Monthly

The inspection verifies the handle is not blocked and the device is clearly labeled.

Correct answer: A. Monthly

NEW QUESTION # 31

.....

In fact, our ITFAS-Level-1 study materials are not expensive at all. The prices of the ITFAS-Level-1 exam questions are reasonable and affordable while the quality of them are unmatched high. So with minimum costs you can harvest desirable outcomes more than you can imagine. By using our ITFAS-Level-1 Training Materials you can gain immensely without incurring a large amount of expenditure. And we give some discounts on special festivals.
