Amazon AWS Certified Cloud Practitioner Sample Questions (Q572-Q577):

NEW QUESTION # 572

A user has limited knowledge of AWS services, but wants to quickly deploy a scalable Node.js application in the AWS Cloud. Which service should be used to deploy the application?

- A. AWS CloudFormation
- B. Amazon EC2
- C. AWS OpsWorks
- **D. AWS Elastic Beanstalk**

Answer: D

NEW QUESTION # 573

A company is running workloads for multiple departments within a single VPC. The company needs to be able to bill each department for its resource usage.

Which action should the company take to accomplish this goal with the LEAST operational overhead?

- A. Move each department resource to its own AWS account.
- B. Use AWS Organizations to get a billing report for each department.
- C. Move each department resource to its own VPC.
- **D. Add a department tag to each resource and configure cost allocation tags.**

Answer: D

Explanation:

Adding a department tag to each resource and configuring cost allocation tags is an action that can help you accomplish the goal of billing each department for its resource usage with the least operational overhead. Tags are simple labels consisting of a key and an optional value that you can assign to AWS resources. You can use tags to organize your resources and track your AWS costs on a detailed level. Cost allocation tags enable you to track your AWS costs on a detailed level. After you activate cost allocation tags, AWS uses the cost allocation tags to organize your resource costs on your cost allocation report, to make it easier for you to categorize and track your AWS costs. Moving each department resource to its own VPC or its own AWS account is an action that can help you isolate and control the resources for each department, but it would incur more operational overhead than using tags. Using AWS Organizations to get a billing report for each department is an action that can help you consolidate billing and payment across multiple AWS accounts, but it would not help you bill each department for its resource usage within a single VPC.

NEW QUESTION # 574

A director has been tasked with investigating hybrid cloud architecture. The company currently accesses AWS over the public internet.

Which service will facilitate private hybrid connectivity?

- A. AWS Web Application Firewall (AWS WAF)
- **B. AWS Direct Connect**
- C. Amazon Simple Storage Service (Amazon S3) Transfer Acceleration
- D. Amazon Virtual Private Cloud (Amazon VPC) NAT Gateway

Answer: B

Explanation:

Explanation

Amazon VPC provides multiple network connectivity options for you to leverage depending on your current network designs and requirements. These connectivity options include leveraging either the internet or an AWS Direct Connect connection as the network backbone and terminating the connection into either AWS or user-managed network endpoints. Additionally, with AWS, you can choose how network routing is delivered between Amazon VPC and your networks, leveraging either AWS or user-managed network equipment and routes.

NEW QUESTION # 575

Matt is working on a projects that involves converting an images format from .png to .jpg. Thousands of images have to be converted; however, time is not really an issue and continual processing is not required. What type of EC2 buying option would be most cost-effective for Matt to use?

Choose the Correct answer:

- A. Reserved
- B. None of the above
- C. On-demand
- **D. Spot**

Answer: D

Explanation:

Spot instances offer the cheapest option of all EC2's buying options. However, spot instances should only be used when there can be interruptions in the processing jobs being conducted. This is due to the fluctuation in spot pricing. If the spot price goes above your bid price, then you will lose access to the spot instance (thus causing a stoppage in processing).

NEW QUESTION # 576

Which of the following will help a user determine if they need to request a VPC service limit increase?

- A. AWS Service Catalog
- B. AWS Trusted Advisor
- C. AWS Personal Health Dashboard
- D. AWS Cost and Usage Report

Answer: C
