SAP Certified Associate - Validating Business Transformation Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which of the following are dimensions of the clean core concept?
(3 correct answers)

- A. Integrations
- B. Processes
- C. Applications
- D. Operations
- E. Configurations

Answer: A,B,E

Explanation:

The clean core concept is fundamental to SAP's cloud strategy and governs how organizations should structure their ERP systems to remain flexible, upgradeable, and stable. One key dimension is Configurations

, which must follow SAP-recommended patterns and avoid unnecessary customizations that compromise upgradeability.

Configurations define how the system behaves, and keeping them standardized ensures that the core can remain clean.

A second dimension is Integrations. Clean core principles emphasize using SAP-approved integration patterns, APIs, and event-driven models rather than modifying the underlying system. By handling extensions and integrations through platforms like SAP Business Technology Platform, organizations avoid invasive changes that would otherwise jeopardize upgrades or system stability.

A third dimension is Processes, referring to the ability to adopt SAP's standard end-to-end processes wherever possible. Aligning with SAP best practices minimizes the need for enhancements in the core system and ensures compatibility with future innovations.

Applications and operations are not part of the formal clean core dimensions; rather, they are broader parts of the overall IT landscape. The clean core dimensions focus specifically on system configuration, integration behavior, and business process alignment—ensuring that SAP systems remain cloud-ready and agile.

NEW QUESTION # 33

Which approach combines the Greenfield and Brownfield strategies?

- A. Hybrid Cloud
- B. Side-by-Side Migration
- C. Selective Data Transition
- D. Cloud-Native Apps

Answer: C

Explanation:

Selective Data Transition (SDT) is a specialized approach that blends elements of both Greenfield (new implementation) and Brownfield (system conversion) strategies. This hybrid methodology allows organizations to selectively migrate configuration settings, historical data, and business processes from their existing systems into a new SAP S/4HANA environment. Unlike a pure Greenfield approach, which requires starting completely fresh, SDT preserves valuable components of the legacy system. At the same time, it avoids the full conversion requirements of a Brownfield approach, offering greater flexibility for reengineering processes and adopting SAP best practices.

SDT is especially useful for companies with multiple ERP systems or those undergoing large-scale consolidation. It enables harmonization of processes, data cleansing activities, and the adoption of standardized templates while still leveraging existing investment where beneficial.

The other options do not combine the two approaches. Cloud-native apps refer to development style; side-by-side migration describes extension patterns; hybrid cloud refers to infrastructure strategy. Selective Data Transition is the only transformation methodology that formally merges the strengths of both Greenfield and Brownfield.
