dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41
A package you depend on has released a major update with breaking changes. How might you approach the migration?

- A. Review the release notes and the migration guide provided by the package maintainers.
- B. Update your packages.yml to point to the new version and immediately refactor all your dependent models.
- C. Pin the package to the older version in your packages.yml file and plan a controlled migration.
- D. Fork the package and maintain your own custom version indefinitely.

Answer: A

Explanation:
Understanding the changes is key' Then plan a staged migration to minimize disruption. Forking should be a last resort.

NEW QUESTION # 42
(Multiple Select)

- A. Adding test records to validate a new custom data test.
- B. Loading data to fact tables as part of the regular ETL process.
- C. Populating a staging environment with representative data for testing.
- D. Inserting rows for a generic date dimension table.

Answer: C,D

Explanation:
dbt seed is ideal for static data, often used in development and testing. Fact tables usually rely on upstream data sources.

NEW QUESTION # 43
Your baseline comparison tests start failing intermittently. Data distributions change slightly from day to day, sometimes triggering the thresholds. Which strategy could make your tests more robust?

- A. Scheduling the tests to run less frequently (e.g., weekly rather than daily).
- B. Removing the baseline comparison tests entirely, as they provide unreliable signals.
- C. Introducing configurable tolerances into your test definitions.
- D. Rewriting your SQL to compare averages or medians instead of exact value counts-

Answer: C,D

Explanation:
A makes tests less sensitive to minor noise- B allows for controlled flexibility. C is a workaround, sacrificing freshness. D gives up on a valuable check_

NEW QUESTION # 44
Your dbt project pulls data from a SaaS application using a third-party adapter. You observe performance issues. Where might you start optimizing?

- A. Review the source definitions to see if unnecessary data is being selected.
- B. Configure the source as an incremental materialization within your project file.
- C. Check your dbt_project.yml for project-level performance settings.
- D. Investigate the third-party adapter's settings or documentation for potential bottlenecks.

Answer: D

Explanation:
Third-party adapters often introduce bottlenecks. Start with optimizing whats specific to the adapter The others might help in some cases but are less directly dependent on the external data source.

NEW QUESTION # 45
Logic Error

- A. Create a separate branch specifically for addressing this issue.
- B. Adjust the model's SQL query and re-run it to observe the changes in output.
- C. Deploy the modified model to a development or staging environment.
- D. Write new unit tests that specifically target the faulty calculation logic with various input scenarios.

Answer: B

Explanation:
Branching creates an isolated workspace, unit tests proactively define expected results, then you modify the code, and finally, you deploy to a non-production environment for further testing.
