

# Fortinet FCSS\_EFW\_AD-7.6 Dumps - Well Renowned Way Of Instant Success

P.S. Free & New FCSS\_EFW\_AD-7.6 dumps are available on Google Drive shared by DumpsFree: [https://drive.google.com/open?id=1rQC8KvXMS\\_WxkpebIFLxT42C4P0PnDUU](https://drive.google.com/open?id=1rQC8KvXMS_WxkpebIFLxT42C4P0PnDUU)

FCSS\_EFW\_AD-7.6 Certification exams are essential to move ahead, because being certified professional a well-off career would be in your hand. FCSS\_EFW\_AD-7.6 is among one of the strong certification provider, who provides massively rewarding pathways with a plenty of work opportunities to you and around the world. But the mystery is quite challenging to pass exam unless you have an updated exam material. Thousands of people attempt FCSS\_EFW\_AD-7.6's exam but majorly fails despite of having good professional experience, because only practice and knowledge isn't enough a person needs to go through the exam material designed by FCSS\_EFW\_AD-7.6, otherwise there is no escape out of reading. Well, you have landed at the right place; DumpsFree offers your experts designed material which will gauge your understanding of various topics.

## Fortinet FCSS\_EFW\_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Security Profiles: This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL</li> <li>SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Routing:</b> This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>VPN:</b> This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>System Configuration:</b> This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Central Management:</b> This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.</li> </ul>

## Exam Fortinet FCSS\_EFW\_AD-7.6 Voucher, FCSS\_EFW\_AD-7.6 Certification Materials

Nowadays, a certificate is not only an affirmation of your ability but also help you enter a better company. FCSS\_EFW\_AD-7.6 learning materials will offer you an opportunity to get the certificate successfully. We have a professional team to search for the information about the exam, therefore FCSS\_EFW\_AD-7.6 Exam Dumps of us are high-quality. We also pass guarantee and money back guarantee. Just think that, you just need to spend some money, and you can get a certificate, therefore you can have more competitive force in the job market as well as improve your salary.

## Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q114-Q119):

### NEW QUESTION # 114

A company's users on an IPsec VPN between FortiGate A and B have experienced intermittent issues since implementing VXLAN. The administrator suspects that packets exceeding the 1500-byte default MTU are causing the problems. In which situation would adjusting the interface's maximum MTU value help resolve issues caused by protocols that add extra headers to IP packets?

- A. Adjust the MTU on interfaces only if FortiGate has the FortiGuard enterprise bundle, which allows MTU modification.
- B. Adjust the MTU on interfaces in all FortiGate devices that support the latest family of Fortinet SPUs: NP7, CP9 and SP5.
- **C. Adjust the MTU on interfaces in controlled environments where all devices along the path allow MTU interface changes.**
- D. Adjust the MTU on interfaces only in wired connections like PPPoE, optic fiber, and ethernet cable.

**Answer: C**

Explanation:

When using IPsec VPNs and VXLAN, additional headers are added to packets, which can exceed the default 1500-byte MTU. This can lead to fragmentation issues, dropped packets, or degraded performance.

To resolve this, the MTU (Maximum Transmission Unit) should be adjusted only if all devices in the network path support it. Otherwise, some devices may still drop or fragment packets, leading to continued issues.

Why adjusting MTU helps:

- \* VXLAN adds a 50-byte overhead to packets.
- \* IPsec adds additional encapsulation (ESP, GRE, etc.), increasing the packet size.
- \* If packets exceed the MTU, they may be fragmented or dropped, causing intermittent connectivity issues.
- \* Lowering the MTU on interfaces ensures packets stay within the supported size limit across all network devices.

**NEW QUESTION # 115**

Which two parameters must you configure in neighbor-range for ADVPN iBGP deployment?

- A. update-source
- B. remote-as
- C. neighbor-group
- D. route-reflector-client

**Answer: B,C**

Explanation:

In an ADVPN deployment using iBGP, the Hub uses dynamic BGP peering to manage a large number of spokes. The neighbor-range configuration is used to define the range of IP addresses from which the Hub will accept dynamic BGP connections.

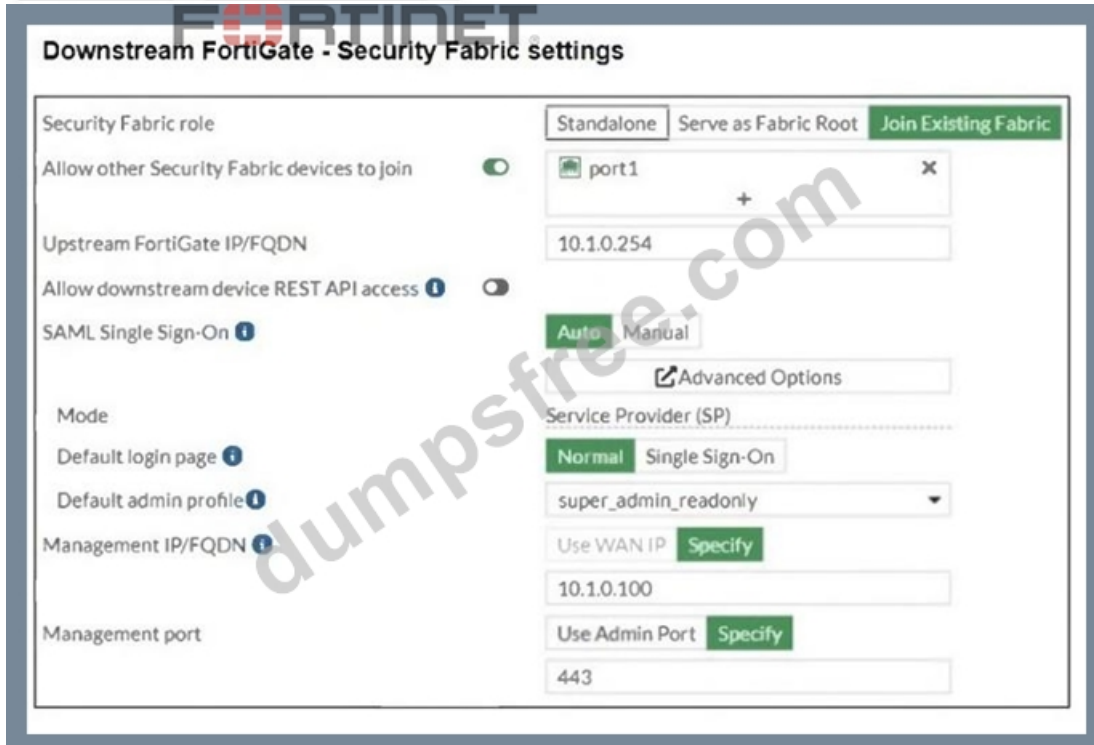

\* neighbor-group: Within the neighbor-range, you must specify a neighbor-group. This group acts as a template that defines the shared settings for all spokes in that range.

\* remote-as: The remote-as is a mandatory parameter defined within the associated neighbor-group to identify the autonomous system of the spokes (which, in iBGP, matches the Hub 's AS). While route-reflector-client is also a required setting for the Hub in this topology, it is a property configured under the neighbor-group, whereas neighbor-group and the group 's remote-as are the foundational requirements for the range to function.

**NEW QUESTION # 116**

Refer to the exhibits.

Root FortiGate - System Administrator configuration

The Administrators section of a root FortiGate device and the Security Fabric Settings section of a downstream FortiGate device are shown.

When prompted to sign in with Security Fabric in the downstream FortiGate device, a user enters the AdminSSO credentials. What is the next status for the user?

- A. The user accesses the downstream FortiGate with super\_admin privileges.
- B. The user receives an authentication failure message.

- C. The user is prompted to create an SSO administrator account for AdminSSO.
- **D. The user accesses the downstream FortiGate with super\_admin\_readonly privileges.**

**Answer: D**

Explanation:

From the Root FortiGate - System Administrator Configuration exhibit:

\* The AdminSSO account has the super\_admin\_readonly role.

From the Downstream FortiGate - Security Fabric Settings exhibit:

\* The Security Fabric role is set to Join Existing Fabric, meaning it will authenticate with the root FortiGate.

\* SAML Single Sign-On (SSO) is enabled, and the default admin profile is set to super\_admin\_readonly.

When the AdminSSO user logs into the downstream FortiGate using SSO, the authentication request is sent to the root FortiGate, where AdminSSO has super\_admin\_readonly permissions. Since the downstream FortiGate inherits this permission through the Security Fabric configuration, the user will be granted super\_admin\_readonly access.

### NEW QUESTION # 117

Refer to the exhibit, which shows an enterprise network connected to an internet service provider.

The administrator must configure the BGP section of FortiGate A to give internet access to the enterprise network. Which command must the administrator use to establish a connection with the internet service provider?

- A. config redistribute ospf
- **B. config neighbor**
- C. config router route-map
- D. config redistribute bgp

**Answer: B**

Explanation:

In BGP (Border Gateway Protocol), a neighbor (peer) configuration is required to establish a connection between two BGP routers. Since FortiGate A is connecting to the ISP (Autonomous System 10) from AS 30, the administrator must define the ISP's BGP router as a neighbor.

The config neighbor command is used to:

Define the ISP's IP address as a BGP peer

Specify the remote AS (AS 10 in this case)

Allow BGP route exchanges between FortiGate A and the ISP

### NEW QUESTION # 118

Refer to the exhibit, which shows the ADVPN IPsec interface representing the VPN IPsec phase 1 from Hub A to Spoke 1 and Spoke 2, and from Hub to Spoke 3 and Spoke 4.

An administrator must configure an ADVPN using IBGP and EBGP to connect overlay network 1 with 2. What must the administrator configure in the phase 1 VPN IPsec configuration of the ADVPN tunnels?

- A. set auto-discovery-forwarder enable and set remote-as x
- B. set auto-discovery-sender enable and set network-id x
- C. set auto-discovery-receiver enable and set npu-offload enable
- D. set auto-discovery-crossover enable and set enforce-multihop enable

**Answer: D**

Explanation:

When configuring ADVPN (Auto-Discovery VPN) to connect overlay networks across different hubs using IBGP and EBGP, special configurations are required to allow spokes from different overlay networks to dynamically establish tunnels.

set auto-discovery-crossover enable

This allows cross-hub tunnel discovery in an ADVPN deployment where multiple hubs are used.

Since Hub A and Hub B belong to different overlays, enabling crossover discovery ensures that spokes from one overlay can dynamically create direct tunnels to spokes in the other overlay when needed.

set enforce-multihop enable

This setting ensures that BGP peers using loopback interfaces can establish connectivity even if they are not directly connected.

Multihop BGP sessions are required when using loopback addresses as BGP peer sources because the connection might need to traverse multiple routers before reaching the BGP neighbor. This is especially useful in ADVPN deployments with multiple hubs, where routes might need to cross from one hub to another.

## NEW QUESTION # 119

.....

The passing rate of our FCSS\_EFW\_AD-7.6 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our FCSS\_EFW\_AD-7.6 practice braindumps are selected strictly based on the Real FCSS\_EFW\_AD-7.6 Exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them and guarantees that each answer and question is useful and valuable.
