

New Integration-Architect Test Test & New Integration-Architect Exam Discount

BONUS!!! Download part of LatestCram Integration-Architect dumps for free: https://drive.google.com/open?id=1rrA1_6buXItUIGd9W-bvaCj0U5433F3t

Once you ensure your grasp on the Integration-Architect questions and answers, evaluate your learning solving the Integration-Architect practice tests provided by our testing engine. This innovative facility provides you a number of practice questions and answers and highlights the weak points in your learning. You can improve the weak areas before taking the actual test and thus brighten your chances of passing the Integration-Architect Exam with an excellent score. Moreover, doing these practice tests will impart you knowledge of the actual Integration-Architect exam format and develop your command over it.

Salesforce Integration-Architect certification is ideal for professionals who work in IT or consulting roles and are responsible for designing and implementing complex integration solutions. Salesforce Certified Integration Architect certification is also suitable for professionals who are looking to enhance their career prospects by gaining expertise in integrating Salesforce with other systems. The Integration-Architect certification is recognized as a mark of excellence in the Salesforce community and is highly valued by employers who are looking for professionals with advanced integration skills.

Salesforce Integration-Architect Certification Exam is designed to test the expertise of the integration architects in integrating various systems with Salesforce. Salesforce Certified Integration Architect certification enables integration architects to prove their skills in designing, building, and maintaining complex integrations between Salesforce and other systems. Salesforce Certified Integration Architect certification exam is a must-have for integration architects who want to advance their career by demonstrating their proficiency in Salesforce integration.

Salesforce Integration-Architect Exam is intended for experienced architects and developers who have expertise in designing and implementing complex integrations using various integration patterns, techniques, and technologies. Integration-Architect exam covers a wide range of topics, including integration architecture, integration patterns, integration security, data integration, and application integration. Integration-Architect exam is ideal for professionals who want to demonstrate their expertise in integrating Salesforce with other systems and who want to advance their careers as integration architects.

New Integration-Architect Exam Discount, Latest Test Integration-Architect Experience

If you find someone around has a nice life go wild, it is because that they may have favored the use of study & work method different from normal people. Integration-Architect dumps torrent files may be the best method for candidates who are preparing for their IT exam and eager to clear exam as soon as possible. People's success lies in their good use of every change to self-improve. Our Integration-Architect Dumps Torrent files will be the best resources for your real test. If you choose our products, we will choose efficient & high-passing preparation materials.

Salesforce Certified Integration Architect Sample Questions (Q126-Q131):

NEW QUESTION # 126

Northern TrailOutfitters has a requirement to encrypt few of widely used standard fields. They also want to be able to use these fields in workflow rules.

Which security solution should an Integration Architect recommend to fulfill the business use case?

- A. Data Masking
- B. CryptographyClass
- C. Classic Encryption
- **D. Platform Shield Encryption**

Answer: D

Explanation:

Option D is correct because Platform Shield Encryption allows you to encrypt standard fields and use them in workflow rules. Platform Shield Encryption uses AES 256-bit encryption to protect sensitive data atrest, while preserving platform functionality¹² Option A is incorrect because Cryptography Class is a set of Apex methods for creating digests, message authentication codes, signatures, and encryption. It does not provide a way to encrypt standard fields or use them in workflow rules³ Option B is incorrect because Data Masking is a feature that replaces sensitive data in sandboxes with dummy data. It does not encrypt data in production or allow the use of encrypted data in workflow rules⁴⁵ Option C is incorrect because Classic Encryption is a feature that encrypts custom fields with 128-bit AES encryption. It does not support standard fields or workflow rules⁶⁷ References: 1: Salesforce Shield - Data Monitoring & End to End Encryption 2: How Shield Platform EncryptionWorks 3: Crypto Class 4: Data Masking - Anonymize Sensitive Data 5: Secure Your SandboxData with Salesforce Data Mask 6: What's the Difference Between Classic Encryption and Shield Platform Encryption? 7: Salesforce Classic vs. Salesforce Shield PlatformEncryption: Which One Do You Need?

NEW QUESTION # 127

A largeB2C customer is planning to implement Salesforce CRM to become a Customer centric enterprise.

Below, is their current system landscape diagram.

The goals for implementing Salesforce follows:

1. Develop a 360 view of customer
2. Leverage Salesforce capabilities for Marketing, Sales and Service processes
3. Reuse Enterprise capabilities built for Quoting and Order Management processes Which three systems from the current system landscape can be retired with the implementation of Salesforce?

Choose 3 answers

- **A. Case Management System**
- B. Quoting System
- **C. Email Marketing System**
- D. Order Management System

- E. Sales Activity System

Answer: A,C,E

Explanation:

Explanation

The three systems from the current system landscape that can be retired with the implementation of Salesforce are Case Management System, Sales Activity System, and Email Marketing System. These systems can be replaced by Salesforce Service Cloud, Sales Cloud, and Marketing Cloud respectively, which provide similar or better capabilities for managing cases, sales activities, and email campaigns. Option A is not correct because Order Management System cannot be retired with the implementation of Salesforce. The company wants to reuse their existing enterprise capabilities for order management processes, which are likely to be complex and customized. Salesforce does not provide a native order management solution for B2C commerce scenarios. Option E is not correct because Quoting System cannot be retired with the implementation of Salesforce. The company wants to reuse their existing enterprise capabilities for quoting processes, which are likely to be complex and customized. Salesforce does not provide a native quoting solution for B2C commerce scenarios.

NEW QUESTION # 128

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all of their enterprise applications and is planning to include Salesforce as well.

Which Salesforce API should an Integration Architect use to meet the requirement?

- A. Tooling API
- B. Analytics REST API
- C. Metadata API
- D. SOAP API

Answer: A

Explanation:

Option D is correct because Tooling API is the Salesforce API that can be used to retrieve code coverage and test results for Apex classes and triggers. Tooling API provides REST and SOAP interfaces to access metadata about code, execute tests, and get test results¹² Option A is incorrect because SOAP API is a Salesforce API that can be used to create, retrieve, update, or delete records, but not to get code coverage and test results. SOAP API uses a WSDL file to define the parameters for accessing data through the API¹³ Option B is incorrect because Analytics REST API is a Salesforce API that can be used to access data from reports and dashboards, but not from code coverage and test results. Analytics REST API provides a programmatic way to interact with analytics features such as lenses, datasets, and dashboards⁴ Option C is incorrect because Metadata API is a Salesforce API that can be used to retrieve, deploy, create, update, or delete customization information, such as custom object definitions and page layouts, but not code coverage and test results. Metadata API is mainly used for development tools or backup tools⁵ References: 1: Introducing Tooling API 2: Tooling API Examples 3: SOAP API Developer Guide 4: Analytics REST API Developer Guide 5: Metadata API Developer Guide

NEW QUESTION # 129

Northern Trail Outfitters (NTO) has an affiliate company that would like immediate notifications of changes to opportunities in the NTO Salesforce instance. The affiliate company has a CometD client available.

Which solution is recommended in order to meet the requirement?

- A. Configure External Services to call the subscriber in Apex in the OnChange Trigger event as part of the flow.
- B. Create a connected app in the affiliate org and select the "Accept CometD API Requests".
- C. Create a PushTopic update event on the Opportunity Object to allow the subscriber to react to the streaming API.
- D. Implement a polling mechanism in the client that calls the SOAP API getUpdated method to get the ID values of each updated record.

Answer: C

NEW QUESTION # 130

An architect decided to use Platform Events for integrating Salesforce with an external system for a company.

What should an architect consider when proposing this type of integration mechanism?

- A. To subscribe to an event, the integration user in Salesforce needs Read access to the event entity.
- B. External system needs to have the same uptime in order to be able to keep up with Salesforce Platform Events.
- C. Salesforce needs to be able to store information about the external system in order to know which event to send out.

Answer: A

Explanation:

When proposing Platform Events as an integration mechanism, an architect must ensure that the security model is correctly configured to allow for the publication and subscription of events. Unlike standard objects, Platform Events have specific permission requirements for the "Integration User" or any system entity interacting with the event bus.

For an external system to subscribe to a Platform Event stream (via CometD or the Pub/Sub API), the user account used to authenticate the connection must have the "Read" permission on the specific Platform Event entity. Similarly, if the external system needs to publish events back into Salesforce, the user must have "Create" permissions. These permissions are typically managed through a Profile or a Permission Set assigned to the Integration User.

Regarding the other options, Option A is incorrect because Platform Events are designed for asynchronous communication. They are inherently decoupled; the external system does not need the same uptime as Salesforce. High-volume platform events are stored in the event bus for 72 hours, allowing an external system to "catch up" using a Replay ID once it comes back online. Option C is also incorrect because Platform Events follow a Publish/Subscribe pattern. Salesforce "broadcasts" the event to the bus without needing to know which specific external systems are listening. This decoupling is a primary advantage of event-driven architecture, as it allows for a "one-to-many" distribution model where multiple systems can consume the same message without additional configuration within Salesforce. Thus, ensuring the correct object-level permissions (Read/Create) is the most critical technical consideration for the architect to guarantee successful message delivery.

NEW QUESTION # 131

.....

Salesforce Integration-Architect Exam provided by LatestCram is of the highest quality, and it enables participants to pass the exam on their first try. For successful preparation, it is essential to have good Salesforce Integration-Architect exam dumps and to prepare questions that may come up in the exam. LatestCram helps candidates overcome all the difficulties they may encounter in their exam preparation. To ensure the candidates' satisfaction, LatestCram has a support team that is available 24/7 to assist with a wide range of issues.
