Unparalleled Microsoft New SC-900 Test Test: Microsoft Security Compliance and Identity Fundamentals Pass Guaranteed

ExamDumpsVCE SC-900 product in above-mentioned three formats carries most probable real exam questions. Every person who attempts the exam has different preparation style. Some want to do in-depth study while some prefer quick Microsoft Security Compliance and Identity Fundamentals test preparation. ExamDumpsVCE has introduced these three formats so every applicant of the test can prepare as per unique learning styles. In addition, we offer up to 1 year of free questions updates, free demos, discounts, and a 24/7 customer support. Don't miss these incredible offers. Purchase real exam questions today.

Microsoft SC-900 certification exam covers a wide range of topics, including the principles of security, compliance, and identity management, as well as the latest security technologies and tools. SC-900 Exam is designed to test a candidate's understanding of the key concepts in these areas, as well as their ability to apply this knowledge to real-world scenarios.

Microsoft Security Compliance and Identity Fundamentals Sample Questions (Q102-Q107):

NEW QUESTION # 102

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

A screenshot of a computer Description automatically generated with low confidence

You can use an Azure network security group to filter network traffic to and from Azure resources in an Azure virtual network. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from,

several types of Azure resources. For each rule, you can specify source and destination, port, and protocol.

NEW QUESTION # 103

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Graphical user interface, text, application Description automatically generated

NEW QUESTION # 104

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Reference:

In Microsoft SCI terminology, authorization is the stage that answers "what can this authenticated user do?" Microsoft Learn explains that authorization is "the process of determining what a user is allowed to do or access after they have been authenticated" and governs access to specific resources (apps, APIs, data) through policies such as role assignments, permissions, and Conditional Access. By contrast, authentication is "the process of proving identity," for example by entering a password, using MFA, or presenting a certificate- authentication verifies who the user is, not what they can access.

SCI guidance further clarifies adjacent concepts: single sign-on (SSO) streamlines the authentication experience by allowing a user to sign in once and then access multiple applications without repeated prompts; it does not decide the user's rights within those apps.

Federation establishes trust between identity providers and service providers to enable cross-domain authentication, but authorization decisions still occur based on the receiving service's policies and the user's claims/roles.

Therefore, when the sentence asks for "the process of identifying whether a signed-in user can access a specific resource," the correct concept is authorization, because it evaluates the user's permissions and enforces access control after successful authentication.

NEW QUESTION # 105

Select the answer that correctly completes the sentence.

Answer:

Explanation:

NEW QUESTION # 106

Which Microsoft Purview solution can be used to identify data leakage?

- A. eDiscovery
- **B. insider risk management**
- C. communication compliance
- D. Compliance Manager

Answer: B

Explanation:

Within Microsoft Purview, Insider Risk Management is the solution that is explicitly designed to detect activities such as IP theft and data leakage. Microsoft describes it as a compliance solution that correlates many user and system signals to identify potentially malicious or inadvertent insider risks, including leaks of sensitive data and data spillage.

Organizations create Insider Risk Management policies that watch for risky behaviors such as unusual file downloads, copying data
