The Check Point Certified Security Administrator R81 certification is highly respected in the IT industry and is recognized by employers around the world. Check Point Certified Security Administrator R81 certification is a great way to demonstrate your expertise in Check Point Security solutions and to showcase your skills to potential employers. Certified professionals are also eligible for a range of benefits, including access to exclusive events, training, and networking opportunities.

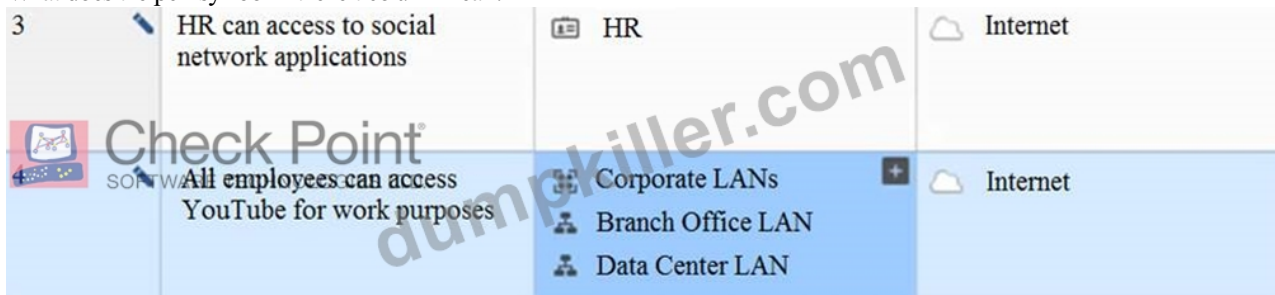

Preparing for the CheckPoint 156-215.81 Exam requires a lot of hard work and dedication. Candidates must have a thorough understanding of Check Point technology, network security, and security policies. They can achieve this by taking training courses, reading study materials, and practicing with sample exam questions. Check Point also offers a variety of resources, including online training, study guides, and practice exams, to help candidates prepare for the exam.

CheckPoint Check Point Certified Security Administrator R81 Sample Questions (Q90-Q95):

NEW QUESTION # 90

View the rule below.

What does the pen-symbol in the left column mean?

- A. Rules have been edited by the logged in administrator, but the policy has not been published yet.
- B. The configuration lock is present. Click the pen symbol in order to gain the lock.
- C. Another user has currently locked the rules for editing.
- D. Those rules have been published in the current session.

Answer: A

NEW QUESTION # 91

A network administrator has informed you that they have identified a malicious host on the network, and instructed you to block it. Corporate policy dictates that firewall policy changes cannot be made at this time.

What tool can you use to block this traffic?

- A. Anti-Malware protection
- B. Suspicious Activity Monitoring (SAM) rules
- C. Anti-Bot protection
- D. Policy-based routing

Answer: B

Explanation:

If a network administrator has identified a malicious host on the network and instructed you to block it, but you cannot make any firewall policy changes at this time, you can use Suspicious Activity Monitoring (SAM) rules to block this traffic. SAM rules are temporary rules that allow you to block or limit traffic from specific sources or destinations without modifying the security policy. SAM rules are created and managed by SmartView Monitor and are enforced by the security gateway for a specified duration. Anti-Bot protection, Anti-Malware protection, and Policy-based routing are not tools that can be used to block traffic without changing the firewall policy. NEW QUESTION # 92

An administrator can use section titles to more easily navigate between large rule bases. Which of these statements is FALSE?

- A. Sectional Titles do not need to be created in the SmartConsole.
- B. A Sectional Title can be used to disable multiple rules by disabling only the sectional title.
- C. These sections are simple visual divisions of the Rule Base and do not hinder the order of rule enforcement.
- D. Section titles are not sent to the gateway side.

Answer: B

Explanation:

The statement that a Sectional Title can be used to disable multiple rules by disabling only the sectional title is false. A Sectional Title is a visual divider that helps organize and navigate large rule bases. It does not affect the rule enforcement order or the rule functionality. Disabling a Sectional Title does not disable the rules under it. To disable multiple rules, you need to select them individually or use Shift+Click or Ctrl+Click to select them in bulk, and then right-click and choose Disable Rule(s). The other

statements are true. Section titles are not sent to the gateway side, they are only displayed in SmartConsole. These sections are simple visual divisions of the Rule Base and do not hinder the order of rule enforcement. Sectional Titles do not need to be created in SmartConsole, they can also be created using SmartConsole CLI or API commands.

NEW QUESTION # 93

After the initial installation on Check Point appliance, you notice that the Management interface and default gateway are incorrect. Which commands could you use to set the IP to 192.168.80.200/24 and default gateway to 192.168.80.1.

- A. add interface Mgmt ipv4-address 192.168.80.200 mask-length 24add static-route default nexthop gateway address 192.168.80.1 onsave config
- B. set interface Mgmt ipv4-address 192.168.80.200 mask-length 24set static-route default nexthop gateway address 192.168.80.1 onsave config
- C. set interface Mgmt ipv4-address 192.168.80.200 255.255.255.0add static-route 0.0.0.0.0.0.0 gw 192.168.80.1 onsave config
- D. add interface Mgmt ipv4-address 192.168.80.200 255.255.255.0add static-route 0.0.0.0.0.0.0 gw 192.168.80.1 onsave config

Answer: B

NEW QUESTION # 94

Which of the following Windows Security Events will NOT map a username to an IP address in Identity Awareness?

- A. Account Logon
- B. Kerberos Ticket Timed Out
- C. Kerberos Ticket Requested
- D. Kerberos Ticket Renewed

Answer: B

Explanation:

Explanation

The Windows Security Event that will NOT map a username to an IP address in Identity Awareness is Kerberos Ticket Timed Out. This event occurs when a Kerberos ticket expires and is not renewed, which means that the user is no longer active on the network. Identity Awareness does not use this event to map a username to an IP address, as it does not indicate a valid user session. The other events are used by Identity Awareness to map a username to an IP address, as they indicate a successful user authentication or activity on the network.
