

C-TS422-2023 Fragen Beantworten - C-TS422-2023 Prüfungsvorbereitung

C_TS422_2023

Question 1

What are the possible results of a production planning run in Advanced Planning (PP/DS)? Note: There are 2 correct answers to this question

- A. Production order
- B. Planned order
- C. Scheduling agreement schedule line
- D. Purchase order

Answer: B C

Question 2

How can you characterize dependent requirements in material requirements planning? Note: There are 2 correct answers to this question

- A. They are created on assembly level during the planning run.
- B. They are created with exact times in Advanced Planning.
- C. They are created when an independent requirement is created for the finished product.
- D. They are only created for multilevel bill of material (BOM) structures.

Answer: A B

Question 3

What are the options if the Dispatched operation status is set for a production order operation? Note: There are 2 correct answers to this question

- A. You can reschedule the operation using infinite scheduling in a planning table.
- B. You can reschedule the operation using lead time scheduling.
- C. You can reschedule the operation using finite scheduling in a planning table.
- D. You can reschedule the operation in the Manage Work Center Capacity app.

Answer: C D

Question 4

You want to reduce planning efforts for B and C materials. Which planning procedure do you recommend?

- A. Consumption-Based Planning
- B. Subassembly Planning
- C. Advanced Planning

Übrigens, Sie können die vollständige Version der ZertPrüfung C-TS422-2023 Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=1disMFSzsFPS-K1EmkfJblAYKoEeQkqb>

Wie kann man die Schulungsunterlagen von SAP C-TS422-2023 Zertifizierungsprüfung kaufen, die preiswert und doch von guter Qualität sind? ZertPrüfung wird den Wunsch der breiten Kandidaten erfüllen, dadurch dass ZertPrüfung ihnen die echten Testaufgaben und Antworten mit niedrigem Preis und hoher Qualität bietet. Im Vergleich zu den Kollegen in der selben Branche liegt der Umsatz von Schulungsunterlagen über SAP C-TS422-2023 Zertifizierung von ZertPrüfung weit voraus. Nach dem Brauch unserer Schulungsunterlagen von SAP C-TS422-2023 ist der bestehensrat fast 100%. Wählen Sie ZertPrüfung, was bedeutet, dass Sie erfolgreich sein werden.

SAP C-TS422-2023 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.
Thema 2	- Introduction to SAP S 4HANA Production Planning: This section covers an overview of production planning components, functions, and planning approaches. Exploration of emerging trends.

Thema 3	• Process Orders in SAP S • 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
Thema 4	• Production Orders in SAP S • 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.
Thema 5	• Material Requirements Planning in SAP S • 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
Thema 6	• Capacity Planning in SAP S • 4HANA: This section covers a discussion of SAP S • 4HANA best practices, SAP HANA database concept, SAP Fiori user experience, and embedded analytics capabilities.
Thema 7	• Advanced Planning in SAP S • 4HANA: This section includes an overview of advanced planning fundamentals and master data. Explanation of key tools and processes. Discussion of planning evaluation concepts.
Thema 8	• Introduction to SAP S • 4HANA Supply Chain Planning: This part covers the background and motivation for SAP S • 4HANA, its main components, business applications, and user experience strategy.
Thema 9	• Master Data in SAP S • 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
Thema 10	• Demand Management in SAP S • 4HANA: This section covers a comparison of production methods in various manufacturing environments.

C-TS422-2023 Prüfungsvorbereitung & C-TS422-2023 Demotesten

ZertPruefung hat die spezielle Schulungsunterlagen zur SAP C-TS422-2023 Zertifizierungsprüfung. Sie können mit wenig Zeit und Geld Ihre IT-Fachkenntnisse in kurzer Zeit verbessern und somit Ihre Fachkenntnisse und Technik in der IT-Branche beweisen. Die Kurse von ZertPruefung werden von den Experten nach ihren Kenntnissen und Erfahrungen für die SAP C-TS422-2023 Zertifizierungsprüfung bearbeitet

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing C-TS422-2023 Prüfungsfragen mit Lösungen (Q23-Q28):

23. Frage

What is a prerequisite for consumption of planned independent requirements to take place for planning strategy 40 (Planning with final assembly)?

- A. A sales order is delivered.
- B. MRP creates a dependent requirement.
- C. MRP creates a planned order.
- **D. A sales order is created.**

Antwort: D

24. Frage

You are trying to create a production order and NO valid production version can be selected. What could be the reasons?

Note: There are 2 correct answers to this question.

- A. All production versions for the material are locked.
- **B. The order lot size is NOT within the validity range of a production version.**
- C. NO production lines are assigned to the production versions..
- **D. NO bills of material (BOMs) are assigned to the production versions.**

Antwort: B,D

Begründung:

A production version is a master data object that links a bill of material (BOM) and a routing or a production process model (PPM) for a material. A production version is required for creating a production order in SAP S/4HANA, as it determines the components, operations, and resources that are needed for producing the material. You can create a production version manually or automatically using the CS_BOM_PRODVER_MIGRATION02 report¹.

If you are trying to create a production order and no valid production version can be selected, it could be because of the following reasons:

No bills of material (BOMs) are assigned to the production versions (A): A BOM is a master data object that defines the components and the quantities that are required for producing a material. A production version must have a valid BOM assigned to it, otherwise it cannot be used for creating a production order. You can assign a BOM to a production version on the MRP 4 tab page of the material master².

The order lot size is not within the validity range of a production version (C): A production version has a validity range that defines the period and the lot size interval in which it can be used for production planning. The validity range is maintained on the MRP 4 tab page of the material master². If the order lot size (the quantity of the material to be produced) is not within the lot size interval of any production version, then no valid production version can be selected for creating a production order.

The other options are not valid reasons for not being able to select a production version for creating a production order:

All production versions for the material are locked (B): A production version can have a status that indicates whether it is active or locked. A locked production version cannot be used for production planning, but it can still be selected for creating a production order. However, the system will issue a warning message that the production version is locked and ask for confirmation before proceeding with the order creation³.

No production lines are assigned to the production versions (D): A production line is an organizational unit that represents a group of resources that are used for producing a material. A production line can be assigned to a production version on the MRP 4 tab page of the material master². However, this assignment is optional and not mandatory for creating a production order. A production line can be used for grouping production versions for reporting or analysis purposes, but it does not affect the selection of a production version for creating a production order⁴.

25. Frage

What are the possible results of a production planning run in Advanced Planning (PP/DS)? Note: There are 2 correct answers to this question.

- **A. Scheduling agreement schedule line**
- B. Production order
- C. Purchase order
- **D. Planned order**

Antwort: A,D

Begründung:

In SAP S/4HANA Advanced Planning (Production Planning and Detailed Scheduling, PP/DS), a production planning run (transaction /SAPAPO/CDPSB0 or heuristics) generates supply elements to cover demand.

Possible results include:

* Planned order(A): PP/DS creates planned orders (visible in /SAPAPO/RRP3) for in-house production to meet requirements (e.g., sales orders, dependent requirements). These are detailed with exact timings and can be converted to production orders later (e.g., via /SAPAPO/PROD).

* Scheduling agreement schedule line(B): For external procurement with a scheduling agreement (maintained in ME31L), PP/DS generates schedule lines (visible in ME38 or /SAPAPO/RRP3) to request delivery from vendors, aligning with precise scheduling needs.

Production order(C) is not a direct result-PP/DS creates planned orders, which are then converted to production orders manually or via a separate process (e.g., CO41).Purchase order(D) is possible in classic MRP for external procurement, but PP/DS typically

generates purchase requisitions or schedule lines, not direct POs. This is per SAP's PP/DS planning output documentation.

26. Frage

Your company produces a finished good based on a forecast and expects it to be in stock when customers order it. If customers order more than the forecasted quantity, this must NOT have any impact on the production program. Which planning strategy do you use?

- A. Planning with final assembly (40)
- B. Assembly processing with production orders (82)
- C. Make-to-stock production (10)
- D. Planning without final assembly (50)

Antwort: C

Begründung:

In SAP S/4HANA, planning strategies (material master, MRP 3 view, Strategy Group) determine how production aligns with demand. The scenario describes a pure make-to-stock (MTS) environment where goods are produced based on forecasts (planned independent requirements, PIRs) and held in stock, with excess customer orders not affecting the production program.

* Make-to-stock production (10)(D): Strategy 10 uses PIRs (entered via MD61) to drive production, and finished goods are stocked (goods receipt via CO15). Sales orders (VA01) are fulfilled from stock, and excess demand beyond the forecast does not trigger additional production or consume PIRs-it's handled separately (e.g., via backorder or rejection). This ensures the production program remains stable, based solely on the forecast.

Assembly processing with production orders (82)(A) is a make-to-order (MTO) strategy tied to sales orders, not forecasts. Planning with final assembly (40)(B) allows sales orders to consume PIRs, potentially impacting production if demand exceeds the forecast. Planning without final assembly (50)(C) plans subassemblies based on PIRs, with final assembly triggered by sales orders, also affecting production. Strategy 10 meets the requirement per SAP's MTS planning logic.

27. Frage

Your project team decides to use a make-to-order planning strategy for a strategic material in discrete manufacturing. What are the impacts of this decision? Note: There are 3 correct answers to this question.

- A. Net requirements calculation is carried out for every sales order individually.
- B. Production orders are created with sales order reference.
- C. Storage location MRP areas are required for sales-order-specific stock.
- D. Sales orders have to be ATP-confirmed (available-to-promise) to be saved.
- E. Both the reduction of make-to-order stock and requirements occur on delivery.

Antwort: A,B,D

28. Frage

.....

Nun ist eine Gesellschaft, die mit den fähigen Leuten überschwemmt. Aber viele Fachleute fehlen trotzdem doch. Beispielsweise fehlen in der IT-Branche Techniker. Und die SAP C-TS422-2023 Zertifizierungsprüfung ist eine Prüfung, die IT-Technik testet. ZertPruefung ist eine Website, die Ihnen Kenntnisse zur SAP C-TS422-2023 Zertifizierungsprüfung liefert.
