## Exam ACD101 Vce & ACD101 Guaranteed Questions Answers

If you want to find the best ACD101 study materials, the first thing you need to do is to find a bank of questions that suits you. Our ACD101 learning material is prepared by experts in strict accordance with the exam outline of the ACD101 certification exam, whose main purpose is to help students to pass the exam with the least amount of time and effort. We can claim that if you study with our ACD101 Practice Engine for 20 to 30 hours, then you will be sure to pass the exam.

## Appian Associate Developer Sample Questions (Q45-Q50):

### NEW QUESTION # 45

A customer wants to display a small toolbar with three icons - a "sad face," a "face with neutral expression," and a "happy face" - on the bottom of every page in their application.

Users will be instructed to use the icon that best expresses their current experience using the application. This will allow the customer to collect valuable data about users.

Which object type should be called from each page to implement this feature?

- A. An interface, because the component must render user interface elements.
- B. An expression rule, because the component captures expressions of user sentiment for analysis.
- C. A decision, because the component captures a choice that users select from an array of custom selection components, rather than a standard dropdown or radio button.

**Answer: A**

Explanation:

In Appian, interfaces are used to design and render user interface elements, allowing for the creation of custom layouts and components that can interact with users. In this scenario, the toolbar with emotion icons is a UI element that needs to be consistently presented across various pages. Using an interface ensures that these icons can be interactively used by users to express their sentiments, and the data collected can be analyzed for user experience insights. Interfaces are capable of embedding such UI elements and can be invoked or included across multiple pages within an application, making them the ideal choice for this requirement.

Reference:

Appian Documentation on Interfaces: Provides detailed guidance on how to design and use interfaces to create user-centric UI components.

### NEW QUESTION # 46

Which Appian feature can help the implementation team analyze the event log data of an existing process?

- A. Workflow
- B. RPA
- C. Process Mining

**Answer: C**

Explanation:

Process mining uses event logs to give insights into process performance, bottlenecks, and compliance with the designed process flow. This feature is valuable for understanding the actual performance of business processes and for identifying areas for improvement.

Reference: Appian Documentation - Process Mining

### NEW QUESTION # 47

You select the "Generate groups and folders to secure and organize objects" option while creating a new application, Acme, with the prefix ACM.

By default, which two groups are generated by Appian? (Choose two.)

- A. ACM Viewers
- B. ACM Administrators
- C. ACM Users
- D. ACM Designers

**Answer: B,D**

Explanation:

When creating a new application in Appian and opting to generate groups and folders for organization and security, Appian automatically creates specific groups to facilitate application development and management. The default groups include "Administrators" and "Designers" with the application prefix, in this case, ACM. The ACM Administrators group is intended for users who will have full control over the application, including configuration and deployment aspects. The ACM Designers group is

designated for users primarily involved in the design and development of the application, granting them necessary permissions to create and modify application components without full administrative privileges.

Reference:

Appian Documentation on Application Design: Offers insights into best practices for structuring and securing Appian applications, including the use of groups for effective application management.

#### NEW QUESTION # 48

You are developing an expression rule. You need to find information on employing an Appian function that you have not used before.

For more information on the Appian function, what should you do first?

- A. Look up the function in the Appian Documentation.
- B. Post a question on Appian Community.
- C. Search the Appian Knowledge Base Articles.

**Answer: A**

Explanation:

When you need information on using a specific Appian function that you have not used before, the first step should be to consult the Appian Documentation. The documentation provides comprehensive details on each function, including syntax, parameters, usage examples, and best practices, which is essential for understanding how to correctly employ the function in an expression.

Reference: Appian Documentation - Functions

#### NEW QUESTION # 49

You received a support ticket where the user claims that nothing happens when they click the button to complete a task. You confirm that the user is assigned to the task.

What is a possible reason for this problem?

- A. The process report that drives the runtime database does not have security set properly.
- B. The button was not configured to submit the form.
- C. The user was not in the user group configured for the process model security.

**Answer: B**

Explanation:

If a user claims that nothing happens when they click a button to complete a task, a possible reason could be that the button was not configured to submit the form. This configuration is essential for triggering the form submission action, which in turn can complete the task or initiate further processes. Without this setup, clicking the button will not result in any action.

Reference:

Appian Documentation: Configuring Buttons in Interfaces

#### NEW QUESTION # 50

.....

Whether you are a newcomer or an old man with more experience, Appian ACD101 Study Materials will be your best choice for our professional experts compiled them based on changes in the examination outlines over the years and industry trends.
