

Analytics-Arch-201 Related Certifications & Reliable Analytics-Arch-201 Study Plan

BONUS!!! Download part of TorrentExam Analytics-Arch-201 dumps for free: https://drive.google.com/open?id=1xAmaMjSHkQGfhlurli9iA-vbaEXw_9I

Our Analytics-Arch-201 exam questions are compiled by experts and approved by authorized personnel and boost varied function so that you can learn Analytics-Arch-201 test torrent conveniently and efficiently. We provide free download and tryout before your purchase. Our Analytics-Arch-201 exam questions just need students to spend 20 to 30 hours practicing on the platform which provides simulation problems, can let them have the confidence to pass the Analytics-Arch-201 Exam, so little time great convenience for some workers. It must be your best tool to pass your Analytics-Arch-201 exam and achieve your target.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization’s needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
Topic 2	<ul style="list-style-type: none"> Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	<ul style="list-style-type: none"> Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Reliable Analytics-Arch-201 Study Plan & Valid Analytics-Arch-201 Exam Tutorial

Being respected and gaining a high social status maybe what you always long for. But if you want to achieve that you must own good abilities and profound knowledge in some certain area. Passing the Analytics-Arch-201 certification can prove that and help you realize your goal and if you buy our Analytics-Arch-201 Quiz prep you will pass the exam successfully. Our product is compiled by experts and approved by professionals with years of experiences. You can download and try out our latest Analytics-Arch-201 quiz torrent freely before your purchase.

Salesforce Certified Tableau Architect Sample Questions (Q195-Q200):

NEW QUESTION # 195

In the context of Tableau Server, what is an important consideration when configuring access to the Metadata API for external applications?

- A. Ensuring external applications have direct database access for synchronized metadata retrieval
- B. Allowing unrestricted access to the Metadata API from any external application
- C. Configuring the Metadata API to provide real-time updates to external applications
- D. Implementing OAuth for secure, token-based authentication for external applications accessing the Metadata API

Answer: D

Explanation:

Implementing OAuth for secure, token-based authentication for external applications accessing the Metadata API Implementing OAuth for secure, token-based authentication is crucial when allowing external applications to access the Metadata API. This ensures that only authorized applications can access the API, enhancing security by providing controlled access based on authenticated tokens. Option A is incorrect because unrestricted access can lead to security vulnerabilities and performance issues. Option B is incorrect as real-time updates are more related to the functionality of the Metadata API rather than its configuration for external applications. Option D is incorrect because direct database access is not a standard or safe practice for external applications, especially in the context of API access.

NEW QUESTION # 196

For automating routine maintenance tasks on a Tableau Server installed on a Windows system, which method would be most suitable for deploying scripts?

- A. Employing Windows Task Scheduler to automate and manage the execution of maintenance scripts
- B. Implementing a continuous integration tool like Jenkins for script execution
- C. Utilizing Tableau Desktop to run maintenance scripts at scheduled times
- D. Manually running scripts through the command line interface each time

Answer: A

Explanation:

Employing Windows Task Scheduler to automate and manage the execution of maintenance scripts For a Tableau Server on a Windows system, Windows Task Scheduler is the most suitable tool for automating routine maintenance scripts. It allows for the scheduling and management of script execution, ensuring that maintenance tasks are performed consistently and efficiently without manual intervention. Option A is incorrect because Tableau Desktop is not designed for automating server maintenance tasks. Option C is incorrect as while Jenkins can be used for continuous integration, it may be more complex than necessary for simple maintenance tasks. Option D is incorrect because manually running scripts is time-consuming and not efficient for routine maintenance.

NEW QUESTION # 197

A company is migrating its Tableau Server environment from an older version to a newer version on a different server. What is the most crucial step to ensure a successful migration?

- A. Focusing only on the migration of user accounts, disregarding data and content
- B. Upgrading the old server to the newest version before migrating to a different server
- C. Migrating all content and data without testing in the new environment

- **D. Conducting a comprehensive compatibility check and testing of dashboards and data sources in the new environment**

Answer: D

Explanation:

Conducting a comprehensive compatibility check and testing of dashboards and data sources in the new environment Ensuring compatibility and conducting thorough testing in the new environment are essential to prevent issues with dashboard functionality and data integrity after the migration. Option A is incorrect because migrating without prior testing can lead to unexpected issues in the new environment. Option C is incorrect as focusing solely on user accounts neglects the critical aspects of data and dashboard migration. Option D is incorrect because upgrading the old server first is not necessary and might introduce additional complexity.

NEW QUESTION # 198

In the process of setting up Service Principal Names (SPNs) for Kerberos authentication in Tableau Server, what is an essential step for ensuring proper configuration?

- A. Assigning a dedicated IP address for each SPN used by Tableau Server
- B. Enabling SSL on Tableau Server to encrypt the SPN communication
- **C. Ensuring the Tableau Server service account has the appropriate SPNs set for the server's fully qualified domain name (FQDN)**
- D. Configuring each user account in Tableau Server with its own unique SPN

Answer: C

Explanation:

Ensuring the Tableau Server service account has the appropriate SPNs set for the server's fully qualified domain name (FQDN) Setting the correct SPNs for the Tableau Server service account is crucial for Kerberos authentication. SPNs should be associated with the service account running Tableau Server and must match the server's FQDN. This enables Kerberos to correctly identify and authenticate the server in a network, ensuring secure communication. Option A is incorrect because SPNs are set for the service account running the server, not for each individual user account in Tableau Server. Option C is incorrect as SPNs are not directly tied to IP addresses but to service accounts and the FQDN of the server. Option D is incorrect because while SSL encryption is important for security, it is not directly related to the configuration of SPNs for Kerberos authentication.

NEW QUESTION # 199

In the context of implementing database encryption for Tableau Server, what factor is important to ensure ongoing data security?

- **A. Ensuring that backup copies of the database are also encrypted**
- B. Increasing the processing power of the database server to handle the additional load from encryption and decryption processes
- C. Setting up a redundant database server to take over in case the primary server fails
- D. Implementing a network monitoring system to track all access to the database server

Answer: A

Explanation:

Ensuring that backup copies of the database are also encrypted When encrypting a database for Tableau Server, it is crucial to ensure that backup copies of the database are also encrypted. This prevents scenarios where encrypted data at rest could be compromised through un-encrypted backups, maintaining a consistent level of security for all stored data, whether it is in active use or backed up. Option A is incorrect because while processing power is important for overall performance, it is not the primary concern for ongoing data security in the context of database encryption. Option C is incorrect as network monitoring, while important for security, does not ensure the encryption of data at rest or in backups. Option D is incorrect because setting up a redundant database server focuses on availability and does not directly address the encryption of data or back-ups.

NEW QUESTION # 200

.....

As we all know it is not easy to obtain the Analytics-Arch-201 certification, and especially for those who cannot make full use of their sporadic time. But you are lucky, we can provide you with well-rounded services on Analytics-Arch-201 practice braindumps to help you improve ability. You would be very pleased and thankful if you can spare your time to have a look about features of our

Analytics-Arch-201 Study Materials. With the pass rate high as 98% to 100%, you can totally rely on our Analytics-Arch-201 exam questions.
