Contending for the success fruit of 312-50v13 practice exam, many customers have been figuring out the effective ways to pass it. Due to the shortage of useful practice materials or being scanty for them, we listed these traits of our 312-50v13 practice materials. Actually, some practice materials are shooting the breeze about their effectiveness, but our 312-50v13 practice materials are real high quality 312-50v13 practice materials with passing rate up to 98 to 100 percent.

The solution is closer to you than you can imagine, just contact the support team and continue enjoying your study with the Certified Ethical Hacker Exam (CEHv13) preparation material. Prep4sures offers affordable Certified Ethical Hacker Exam (CEHv13) exam preparation material. You don't have to go beyond your budget to buy updated ECCouncil 312-50v13 Dumps. To make your 312-50v13 exam preparation material smooth, a bundle pack is also available that includes all the 3 formats of dumps questions.

## Pass Guaranteed Quiz 2026 Newest ECCouncil 312-50v13 Exam Assessment

With pass rate reaching 98%, our 312-50v13 learning materials have gained popularity among candidates, and they think highly of the exam dumps. In addition, 312-50v13 exam braindumps are edited by professional experts, and they have rich experiences in compiling the 312-50v13 exam dumps. Therefore, you can use them at ease. We offer you free update for one year for 312-50v13 Training Materials, and the update version will be sent to your email automatically. If you have any questions after purchasing 312-50v13 exam dumps, you can contact us by email, we will give you reply as quickly as possible.

## ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q348-Q353):

### NEW QUESTION # 348

During a recent security assessment, you discover the organization has one Domain Name Server (DNS) in a Demilitarized Zone (DMZ) and a second DNS server on the internal network.

What is this type of DNS configuration commonly called?

- A. DynDNS
- B. DNSSEC
- C. Split DNS**
- D. DNS Scheme

**Answer: C**

#### Explanation:

Split DNS (also known as Split-Horizon DNS) is a configuration where internal users and external users receive different DNS responses. Typically, one DNS server resides in the DMZ for public access, and another is inside the network for internal name resolution.

# Reference - CEH v13 Official Study Guide, Module 9: System Hacking / Perimeter Security

"Split DNS allows different DNS records to be presented based on whether the requester is from inside or outside the organization's network."

#### # Incorrect options:

- A). DynDNS is a dynamic DNS provider.
- B). DNS Scheme is a non-standard term
- C). DNSSEC is a security extension for DNS, not a deployment model.

### NEW QUESTION # 349

Susan has attached to her company's network. She has managed to synchronize her boss's sessions with that of the file server. She then intercepted his traffic destined for the server, changed it the way she wanted to and then placed it on the server in his home directory.

What kind of attack is Susan carrying on?

- A. A denial of service attack
- B. A spoofing attack
- **C. A man-in-the-middle attack**
- D. A sniffing attack

#### Answer: C

#### Explanation:

In a man-in-the-middle (MITM) attack, an attacker intercepts communication between two parties and can read, alter, or inject data without either party knowing. Susan's actions - intercepting and modifying her boss's session data before relaying it to the server - is the classic MITM pattern.

From CEH v13 Official Courseware:

- \* Module 8: Sniffing
- \* Module 11: Session Hijacking

CEH v13 Study Guide states:

"In a MITM attack, the attacker positions themselves between two communicating parties, relaying and possibly altering communications while maintaining the illusion that the parties are communicating directly." Incorrect Options:

- \* A: Sniffing only involves passive listening.
- \* B: Spoofing may involve impersonation but not necessarily interception and relay.
- \* D: DoS is about service disruption, not data interception.

Reference:CEH v13 Study Guide - Module 8: MITM AttacksRFC 4949 - Internet Security Glossary

### NEW QUESTION # 350

A multinational corporation recently survived a severe Distributed Denial-of-Service (DDoS) attack and has implemented enhanced security measures. During an audit, you discover that the organization uses both hardware- and cloud-based solutions to distribute incoming traffic in order to absorb and mitigate DDoS attacks while ensuring legitimate traffic remains available. What type of DDoS mitigation strategy is the company utilizing?

- **A. Load Balancing**
- B. Black Hole Routing
- C. Rate Limiting
- D. Sinkholing

#### Answer: A

#### Explanation:

This scenario clearly describes Load Balancing as a DDoS mitigation strategy, which is covered under the CEH v13 Network and Perimeter Hacking module. Load balancing distributes incoming network or application traffic across multiple servers or resources to prevent any single system from becoming overwhelmed.

According to CEH v13, modern DDoS mitigation architectures often combine hardware load balancers with cloud-based scrubbing centers or Content Delivery Networks (CDNs). These systems absorb high traffic volumes and ensure availability by spreading

requests across multiple nodes. This approach aligns perfectly with the organization's strategy of absorbing and distributing traffic rather than blocking it outright.

Other options are incorrect:

- \* Black hole routing drops all traffic, including legitimate traffic.
- \* Rate limiting restricts traffic volume rather than distributing it.
- \* Sinkholing redirects traffic for analysis, not load distribution.

#### NEW QUESTION # 351

Heather's company has decided to use a new customer relationship management tool. After performing the appropriate research, they decided to purchase a subscription to a cloud-hosted solution. The only administrative task that Heather will need to perform is the management of user accounts. The provider will take care of the hardware, operating system, and software administration including patching and monitoring.

Which of the following is this type of solution?

- A. PasS
- **B. SaaS**
- C. IaaS
- D. CaaS

#### Answer: B

Explanation:

Software as a service (SaaS) allows users to attach to and use cloud-based apps over the web. Common examples are email, calendaring and workplace tool (such as Microsoft workplace 365).

SaaS provides a whole software solution that you get on a pay-as-you-go basis from a cloud service provider.

You rent the use of an app for your organization and your users connect with it over the web, typically with an internet browser. All of the underlying infrastructure, middleware, app software system and app knowledge are located within the service provider's knowledge center. The service provider manages the hardware and software system and with the appropriate service agreement, can make sure the availability and also the security of the app and your data as well. SaaS allows your organization to induce quickly up and running with an app at token upfront cost.

Common SaaS scenarios

This tool having used a web-based email service like Outlook, Hotmail or Yahoo! Mail, then you have got already used a form of SaaS. With these services, you log into your account over the web, typically from an internet browser. The e-mail software system is found on the service provider's network and your messages are held on there moreover. you can access your email and hold on messages from an internet browser on any laptop or Internet-connected device. The previous examples are free services for personal use. For organizational use, you can rent productivity apps, like email, collaboration and calendaring, and sophisticated business applications like client relationship management (CRM), enterprise resource planning (ERP) and document management. You buy the use of those apps by subscription or per the level of use. Advantages of SaaS

Gain access to stylish applications. to supply SaaS apps to users, you don't ought to purchase, install, update or maintain any hardware, middleware or software system. SaaS makes even sophisticated enterprise applications, like ERP and CRM, affordable for organizations that lack the resources to shop for, deploy and manage the specified infrastructure and software system themselves.

Pay just for what you utilize. you furthermore may economize because the SaaS service automatically scales up and down per the level of usage.

Use free shopper software system. Users will run most SaaS apps directly from their web browser without needing to transfer and install any software system, though some apps need plugins. this suggests that you simply don't ought to purchase and install special software system for your users.

Mobilise your hands simply. SaaS makes it simple to "mobilise" your hands as a result of users will access SaaS apps and knowledge from any Internet-connected laptop or mobile device. You don't ought to worry concerning developing apps to run on differing types of computers and devices as a result of the service supplier has already done therefore. additionally, you don't ought to bring special experience aboard to manage the safety problems inherent in mobile computing. A fastidiously chosen service supplier can make sure the security of your knowledge, no matter the sort of device intense it.

Access app knowledge from anyplace. With knowledge held on within the cloud, users will access their info from any Internet-connected laptop or mobile device. And once app knowledge is held on within the cloud, no knowledge is lost if a user's laptop or device fails.

#### NEW QUESTION # 352

Peter extracts the SIDs list from a Windows 2000 Server machine using the hacking tool "SIDExtractor".

Here is the output of the SIDs:

□

[Image showing multiple user accounts with their Security Identifiers (SIDs)] From the above list identify the user account with System Administrator privileges.

- A. John
- B. Rebecca
- C. Somalia
- D. Shawn
- E. Sheela
- F. Chang
- G. Micah

**Answer: A**

Explanation:

In a Windows system, a Security Identifier (SID) uniquely identifies each user and group. The SID format is:  
S-1-5-21-<domain or machine ID>-<RID>

The Relative Identifier (RID) is the last component in the SID string.

According to Microsoft and CEH v13:

RID 500 # Built-in Administrator account

RID 501 # Guest account

RIDs > 1000 # Regular user accounts

In the given image, the SID:

s-1-5-21-1125394485-807628933-54978560-500chang

has a RID of 500, indicating the built-in administrator account.

From CEH v13:

Module 4: Enumeration

Topic: SID Enumeration

CEH v13 States:

"When enumerating Windows systems, the account with RID 500 is always the default Administrator account, unless renamed.

Attackers often target this account due to its elevated privileges." Incorrect Options:

All others have RIDs not equal to 500 (e.g., 100, 652, 412, etc.)

Reference:CEH v13 Study Guide - Module 4: Enumeration # Section: SID Enumeration & Windows Security AccountsMicrosoft

Documentation on Well-known SIDs: <https://learn.microsoft.com/en-us/windows-server/identity/ad-ds/manage/understanding-security-identifiers>

## NEW QUESTION # 353

.....

With the development of the times, the pace of the society is getting faster and faster. If we don't try to improve our value, we're likely to be eliminated by society. Under the circumstances, we must find ways to prove our abilities. For example, getting the 312-50v13 Certification is a good way. If we had it, the chances of getting a good job would be greatly improved. However, obtaining the 312-50v13 certification is not an easy task.
