### NEW QUESTION # 94

Which two descriptions apply to an XDR solution? (Choose two.)

- A. It is focused on single-vector attacks on specific layers of defense.
- B. It is designed for reporting on key metrics for cloud environments.
- C. It ingests data from a wide spectrum of sources.
- D. It employs machine learning (ML) to identify threats.

**Answer: C,D**

Explanation:

XDR (Extended Detection and Response) uses machine learning (ML) to detect threats by identifying patterns and anomalies. XDR ingests data from multiple sources - including endpoints, networks, servers, and cloud workloads - to provide a unified and correlated view of threats across the environment.

### NEW QUESTION # 95

Which service is encompassed by serverless architecture?

- A. Authentication as a Service
- B. Function as a Service (FaaS)
- C. Security as a Service (SaaS)
- D. Infrastructure as a Service (IaaS)

**Answer: B**

Explanation:

Serverless architecture is primarily implemented through Function as a Service (FaaS), where developers write and deploy individual functions without managing the underlying infrastructure. The cloud provider handles scaling, resource allocation, and execution on demand.

### NEW QUESTION # 96

Which security component can detect command-and-control traffic sent from multiple endpoints within a corporate data center?

- A. Stateless firewall
- B. Personal endpoint firewall
- C. Port-based firewall
- D. Next-generation firewall

**Answer: D**

Explanation:

A next-generation firewall (NGFW) is a security component that can detect command-and-control (C2) traffic sent from multiple endpoints within a corporate data center. A NGFW is a network device that combines traditional firewall capabilities with advanced

features such as application awareness, intrusion prevention, threat intelligence, and cloud-based analysis. A NGFW can identify and block C2 traffic by inspecting the application layer protocols, signatures, and behaviors of the network traffic, as well as correlating the traffic with external sources of threat intelligence. A NGFW can also leverage inline cloud analysis to detect and prevent zero-day C2 threats in real-time. A NGFW can provide granular visibility and control over the network traffic, as well as generate alerts and reports on the C2 activity. References:

#### NEW QUESTION # 97

Which of the following is a Routed Protocol?

- **A. Internet Protocol (IP)**
- B. Transmission Control Protocol (TCP)
- C. Domain Name Service (DNS)
- D. Routing Information Protocol (RIP)

**Answer: A**

Explanation:

A routed protocol is a protocol by which data can be routed. It provides appropriate addressing information in its internet layer or network layer to allow a packet to be forwarded from one network to another network.

Examples of routed protocols are the Internet Protocol (IP) and Internetwork Packet Exchange (IPX). IP is the most widely used routed protocol on the Internet and other networks. It assigns a unique logical address to each device and enables data to be fragmented, reassembled, and routed across multiple networks. References:
