C-TS422-2023證照資訊，C-TS422-2023考證

KaoGuTi的C-TS422-2023考題和答案是最新的，由最新的考試指南編訂，增加了考生通過考試的概率。是最好的自學教材和習題集，幫助你快速通過C-TS422-2023考試，實現順速獲取證書的最佳捷徑。如果C-TS422-2023題庫有變化我們可以第一時間得知，並迅速更新SAP C-TS422-2023題庫。如果在考試過程中變題了，考生可以享受免費更新的服務。免費更新一年的C-TS422-2023考題服務。

最新的 SAP Certified Application Specialist C-TS422-2023 免費考試真題 (Q20-Q25):

問題 #20

Which of the following are possible configuration steps when setting up the alert monitor in Advanced Planning? Note: There are 2 correct answers to this question.

- A. Assign the alert profile to the overall profile.
- B. Create an object selection variant for priority-category-related alerts.
- C. Create an object selection variant for production-planning-related alerts.
- D. Assign the overall profile to the authorization profile.

答案: A,D

解題說明:

The alert monitor in Advanced Planning allows you to monitor and analyze the planning situation and identify any problems or deviations from the desired state. To use the alert monitor, you need to configure the following elements:

Overall profile: This defines the scope and content of the alert monitor, such as the planning objects, the alert types, the alert categories, and the alert levels. You can assign one or more alert profiles to an overall profile to specify the alerts that you want to

monitor.

Alert profile: This defines the criteria and parameters for generating alerts, such as the time horizon, the planning version, the planning mode, and the alert threshold. You can create different alert profiles for different planning scenarios or objectives.

Authorization profile: This defines the access rights and restrictions for the alert monitor, such as the planning objects, the locations, the products, and the resources that a user can view or edit. You can assign an overall profile to an authorization profile to control which alerts a user can see or process.

Therefore, to set up the alert monitor, you need to assign the alert profile to the overall profile (B) and assign the overall profile to the authorization profile (D). Creating an object selection variant for priority-category-related alerts (A) or production-planning-related alerts (C) is not a configuration step, but a selection option in the alert monitor to filter the alerts by different criteria. 問題 #21

Your company manufactures materials whose characteristics differ for each manufacturing process.

Which application do you have to use in SAP S/4HANA Cloud Private Edition to be able to track use this information in all areas of logistics?

- A. Process order management
- B. Quality management
- C. Batch management
- D. Engineering change management

答案: C

問題 #22

You can use capacity availability checks for production orders, which settings have to be made for this?

Note: There are 2 Correct answers to this question?

- A. The relevant for finite scheduling indicator must be set.
- B. A checking rule must be assigned to the work centers
- C. An overall profile must be assigned in the checking control
- D. The scope of check must be defined in customizing.

答案: A,C

解題說明:

To use capacity availability checks for production orders, you need to make the following settings:

The relevant for finite scheduling indicator must be set for the work centers or resources that you want to check. This indicator determines whether the system considers the capacity of the work center or resource during the capacity availability check and finite scheduling. You can set this indicator in the work center or resource master data, or in the routing or production version of the order12.

An overall profile must be assigned in the checking control for the order type and plant. The overall profile defines the parameters for the capacity availability check, such as the period profile, the selection profile, the checking horizon, and the reaction. You can assign the overall profile in Customizing for Capacity Planning under Availability Check -> Checking Control34.

問題 #23

Which actions does the system perform by default when you save a confirmation for a finished product in repetitive manufacturing?

Note: There are 3 correct answers to this question.

- A. Reduce run schedule quantities.
- B. Create associated capacity requirements.
- C. Post production costs to the planned order.
- D. Post the goods receipt for the finished product.
- E. Update statistics for the Business Information Warehouse.

答案：A,D,E

解題說明：

In SAP S/4HANA repetitive manufacturing, confirming a finished product (e.g., via transaction MFBF) triggers default actions based on the REM profile (Customizing, OSP2):

* Post the goods receipt for the finished product(A): When saving a confirmation (MFBF, Backflush tab), the system posts a goods receipt (movement type 101) for the finished product into stock (e.g., unrestricted use), assuming backflushing is active in the REM profile (field: Backflush Mandatory).

* Reduce run schedule quantities(B): The confirmed quantity reduces the openrun schedule quantities (planned orders in MD04 or MF50), aligning the planned production with actual output to prevent overproduction.

* Update statistics for the Business Information Warehouse(D): Confirmation data (e.g., quantity, time) updates statistical tables (e.g., S031, S032) for reporting in SAP BW or embedded analytics, providing insights into production performance (enabled by default in standard settings).

Post production costs to the planned order(C) is incorrect-costs are posted to a product cost collector (KKF6N) in REM, not planned orders, based on the REM profile's costing settings. Create associated capacity requirements(E) occurs during planning (e.g., MRP), not confirmation-capacity is consumed, not created, at this stage. This is per SAP's REM confirmation process.

問題 #24

Your project team decides to use a maketooorder planning strategy for a strategic material in discrete manufacturing. What are the impacts of this decision? Note: There are 3 correct answers to this question.

- A. Production orders are created with sales order reference.
- B. Both the reduction of maketooorder stock requirements occur on delivery.
- C. Storage location MRP areas are required for salesorderspecific stock.
- D. Sales orders have to be ATPconfirmed (availabletopromise) to be saved.
- E. Net requirements calculation is carried out for every sales order individually.

答案：A,D,E

問題 #25
