If you want to prepare for your exam in a paper version, our 156-315.81 test materials can do that for you. 156-315.81 PDF version is printable and you can print them into hard one, and take some notes on them. In addition, we offer you free demo to have a try, so that you can have a better understanding of what you are going to buy. We are pass guarantee and money back guarantee for 156-315.81 Exam Dumps, if you fail to pass the exam, we will give you full refund. Online and offline chat service are available, if you have any questions about 156-315.81 exam materials, you can have a conversation with us, and we will give you reply soon as possible.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q612-Q617):

NEW QUESTION # 612

What is a possible command to delete all of the SSH connections of a gateway?

- A. fw tab -t connections -x -e 00000016
- B. fwaccel dos config set dport ssh
- C. fw sam -I dport 22
- D. fw ctl comtab -x -dpott=22

Answer: C

NEW QUESTION # 613

Identity Awareness allows the Security Administrator to configure network access based on which of the following?

- A. Name of the application, identity of the user, and identity of the machine
- B. Network location, identity of a user, and identity of a machine
- C. Identity of the machine, username, and certificate
- D. Browser-Based Authentication, identity of a user, and network location

Answer: B

Explanation:

Implied rules are predefined rules that are automatically added to the Access Control rulebase by the Security Management Server. Implied rules allow the control connections that are essential for the functionality and security of the Check Point products, such as communication between the Security Gateway and the Security Management Server, synchronization between cluster members, logging, VPN, and ICMP. Implied rules are not visible in the SmartConsole, but they can be viewed and modified using the Global Properties window.

NEW QUESTION # 614

Which one is not a valid upgrade method to R81.10?

- A. Advanced Upgrade
- B. RPM Upgrade

- C. CPUSE Upgrade
- D. Upgrade with Migration

Answer: B

Explanation:

Explanation

RPM upgrade is not a valid upgrade method to R81.10. RPM upgrade is a method of upgrading from R80.20.M1 to R80.20.M2 or later, but it is not supported for upgrading to R81.10. The valid upgrade methods to R81.10 are CPUSE upgrade, advanced upgrade, and upgrade with migration. References: [Check Point Security Expert R81 Installation and Upgrade Guide], page 12.

NEW QUESTION # 615

Gaia has two default user accounts that cannot be deleted. What are those user accounts?

- A. Admin and Default
- B. Expert and Clish
- C. Admin and Monitor
- D. Control and Monitor

Answer: C

Explanation:

Gaia has two default user accounts that cannot be deleted: Admin and Monitor. Admin is a superuser account that has full access to all Gaia features and commands. Monitor is a read-only account that can view Gaia configuration and status but cannot make any changes. Both accounts have predefined passwords that can be changed by the Admin user. References: [Check Point R81 Gaia Administration Guide], page 29 SRC: GAIA R81.20 Administration Guide User Management -> Users These users are created by default and cannot be deleted: admin and monitor

NEW QUESTION # 616

Name the authentication method that requires token authenticator.

- A. Radius
- B. DynamicID
- C. SecureID
- D. TACACS

Answer: C

Explanation:

The correct answer is A. SecureID.

SecureID is an authentication method that uses a token-based system to generate one-time passwords (OTPs) for users. Users need to have a physical or software token that displays a code that changes periodically. The code is used along with a personal identification number (PIN) to authenticate the user.

DynamicID is another authentication method that uses OTPs, but it does not require a token. Instead, it sends the OTP to the user's email or phone number.

Radius and TACACS are protocols that allow remote authentication of users through a centralized server.

They do not use tokens, but they can support different types of authentication methods, such as passwords, certificates, or OTPs.
