For the perfect and instant Salesforce Certified Platform Developer II - Multiple Choice Plat-Dev-301 exam preparation, you can get help from Salesforce Plat-Dev-301 Exam Questions. The Lead2PassExam Plat-Dev-301 exam questions are real and will entirely assist you in Plat-Dev-301 exam preparation and you can easily pass the final Salesforce Certified Platform Developer II - Multiple Choice Plat-Dev-301 certification exam.

## Salesforce Certified Platform Developer II - Multiple Choice Sample

## Questions (Q24-Q29):

### NEW QUESTION # 24

As part of their quoting and ordering process, a company needs to send POFs to their document storage system's REST endpoint that supports OAuth 2.0. Each Salesforce user must be individually authenticated with the document storage system to send the PDF.

What is the optimal way for a developer to implement the authentication to the REST endpoint?

- A. Hierarchy Custom Setting with an OAuth token custom field
- B. Hierarchy Custom Setting with 2 password custom field
- **C. Named Credential with an OAuth Authentication Provider**
- D. Named Credential with Password Authentication

**Answer: C**

Explanation:

Named Credentials with OAuth handle secure API calls. Individual authentication for each user with OAuth 2.0 is managed through Named Credentials.

### NEW QUESTION # 25

Recently, users notice that fields that were recently added for one department suddenly disappear without warning.

Which two statements are true regarding these issues and resolution?

Choose 2 answers

- **A. The administrators are deploying their own Change Sets over each other, thus replacing entire Page Layouts in production.**
- B. Page Layouts should never be deployed via Change Sets, as this causes Field-Level Security to be reset and fields to disappear.
- C. The administrators are deploying their own Change Sets, thus deleting each other's fields from the objects in production.
- **D. A sandbox should be created to use as a unified testing environment instead of deploying Change Sets directly to production.**

**Answer: A,D**

Explanation:

Using a dedicated sandbox for testing before deployment can prevent issues like overwriting changes in production. When administrators deploy their own change sets without coordination, they might inadvertently overwrite each other's changes, including page layouts. Best Practices for Deployments with Change Sets

### NEW QUESTION # 26

How should a developer assert that a trigger with an asynchronous process has successfully run?

- A. Create all test data, use future in the rest class, then perform assertions.
- B. Create all test data in the test class, use `system.runs {}` to invoke the trigger, then perform assertions.
- C. Insert records into Salesforce, use `seeAllData=true`, then perform assertions.
- **D. Create all test data in the test class, invoke `Test.startTest {}` and `Test.stopTest {}` and then perform assertions.**

**Answer: D**

Explanation:

Use `Test.startTest()` and `Test.stopTest()`. These methods ensure asynchronous code runs within test execution and allows for accurate assertions.

### NEW QUESTION # 27

An org has an existing process, built using Process Builder, on Opportunity that sets a custom field, `CommissionBaseAmount__c`, when an Opportunity is edited and the Opportunity's Amount changes.

A developer recently deployed an Opportunity before update trigger that uses the `CommissionBaseAmount__c` and complex logic to calculate a value for a custom field, `CommissionAmount__c`, when an Opportunity stage changes to Closed/Won.

Users report that when they change the Opportunity to Closed/Won and also change the Amount during the same save, the CommissionAmount\_\_c is incorrect.

Which action should the developer take to correct this problem?

- A. Call the process from the trigger.
- B. Call the trigger from the process.
- **C. A Replace the process with a Fast Field Update record-trigger flow.**

**Answer: C**

Explanation:

The issue described is likely due to the order of execution in Salesforce, where processes in Process Builder run after all before triggers. If the Opportunity's Amount is changed and the CommissionBaseAmount\_\_c is set by Process Builder, the trigger that calculates CommissionAmount\_\_c may not see the updated value if it operates before the process.

Replacing the process with a before-save record-triggered flow (formerly known as Fast Field Update) would ensure that CommissionBaseAmount\_\_c is updated before the trigger runs. In a before-save flow, field updates occur before any Apex before update triggers fire, which means the trigger would have the updated value of CommissionBaseAmount\_\_c to use in its calculation.

Before-Save Record-Triggered Flows

#### NEW QUESTION # 28

Which statement is true regarding savepoints?

- A. Reference to savepoints can cross trigger invocations.
- **B. Static variables are not reverted during a rollback.**
- C. You can roll back to any savepoint variable created in any order.
- D. Savepoints are not limited by DML statement governor limits.

**Answer: B**

Explanation:

When rolling back to a savepoint, any DML operations that occurred after that savepoint are undone, but static variables are not reverted. Therefore, when a rollback occurs, the state of all static variables at the time of the rollback remains the same as it was just before the rollback.

#### NEW QUESTION # 29

.....

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, so about how to get the test Plat-Dev-301 certification didn't own a set of methods, and cost a lot of time to do something that has no value. With our Plat-Dev-301 Exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. And you will be bound to pass the exam with our Plat-Dev-301 learning guide!
