CheckPoint Check Point Certified Threat Prevention Specialist (CTPS) Sample Questions (Q30-Q35):

NEW QUESTION # 30

Task: Verify IPS protections are being enforced.

Answer:

Explanation:

See the Explanation.Explanation:

- 1- Open SmartConsole > Logs.
- 2- Filter: blade:"IPS" and action:"Prevented".
- 3- Confirm matching protections from the active profile.
- 4- View details: CVE, protocol, action, confidence level.
- 5- Export log details for auditing.

NEW QUESTION # 31

Task: Compare two custom profiles for audit validation.

Answer:

Explanation:

See the Explanation.Explanation:

- 1- Export both profiles via SmartConsole.
- 2- Use external diff tool or compare policy settings manually.
- 3- Focus on blade settings, confidence levels, and exceptions.
- 4- Document differences and justify configuration choices.
- 5- Store comparison for audit records.

NEW QUESTION # 32

Task: Configure inspection settings for mobile VPN users.

Answer:

Explanation:

See the Explanation.Explanation:

- 1- Go to Threat Prevention > Inspection Settings.
- 2- Add a new exception group for mobile user IP pool.
- 3- Set reduced inspection sensitivity for this group.
- 4- Save, publish, and test VPN user traffic.
- 5- Ensure logs still show critical threats being detected.

NEW QUESTION # 33

Task: Enable HTTPS inspection for Threat Prevention profile to scan encrypted content.

Answer:

Explanation:

See the Explanation.Explanation:

- 1- Ensure HTTPS Inspection is enabled on gateway.
- 2- In the custom profile, enable Inspect HTTPS traffic under Anti-Virus and Anti-Bot.
- 3- Set CA certificate deployment for clients.
- 4- Save changes and install both TP and HTTPS inspection policies.
- 5- Validate detection using test HTTPS malware download.

NEW QUESTION # 34

What is/are the enabled by default protocols supported by the Antivirus Blade?

- A. HTTP/HTTPS, FTP
- B. HTTP/HTTPS, FTP, SMB, SMTP
- C. HTTP/HTTPS, FTP, SMB
- **D. HTTP/HTTPS**

Answer: D

Explanation:

The correct answer is C. HTTP/HTTPS . The course-guide answer identifies HTTP/HTTPS as the Anti- Virus protocols enabled by default. Architecturally, this reflects the most common perimeter malware- delivery path: users downloading web content from the Internet. HTTP is naturally visible to the gateway, while HTTPS requires HTTPS Inspection to expose encrypted file transfers and web objects for Anti-Virus inspection. Check Point documentation notes that most traffic is HTTPS rather than HTTP and recommends enabling HTTPS Inspection to maximize the effectiveness of Threat Prevention Software Blades.

The broader Anti-Virus blade can support more protocols than the default enabled set. Check Point documents that HTTP, FTP, SMB, and SMTP are protocols selectable in SmartConsole, and that IMAP and POP3 can also be enabled through configuration. This distinction is the certification point: supported does not necessarily mean enabled by default . FTP, SMB, SMTP, IMAP, and POP3 can extend inspection coverage, but enabling more protocol inspection increases processing scope and must be aligned with topology, performance, and business risk. Reference topics: Anti-Virus Settings, HTTPS Inspection, protocol support, protected scope, Threat Prevention blade effectiveness.

NEW QUESTION # 35

.....

In short, we live in an age full of challenges. So we must continually update our knowledge and ability. If you are an ambitious person, our 156-590 exam questions can be your best helper. There are many kinds of 156-590 study materials in the market. You must have no idea to choose which one. It does not matter. Our CTPS guide braindumps are the most popular products in the market now. Just buy our 156-590 learning quiz, and you will get all you want.
