- A. The handoff batch should be made as large as possible
- B. When Stories are broken into tasks, it means there are small batch sizes
- C. Large batch sizes increase variability
- D. Large batch sizes ensure time for built-in quality

Answer: C

Explanation:

This statement is true about batch size. Batch size is the amount of work that moves as a unit through a process or system. Large batch sizes increase variability by creating more uncertainty, complexity, dependencies, and unpredictability in the workflow. Large batch sizes also increase waste by causing delays, queues, handoffs, rework, overproduction, and inventory accumulation. Reducing batch size is one of the key ways to optimize value delivery and improve flow efficiency. References: SAFe Lean-Agile Principles, SAFe Principle #5
