Latest Latest EX380 Exam Fee - Easy and Guaranteed EX380 Exam Success

Are you an exam jittering? Are you like a cat on hot bricks before your driving test? Do you have put a test anxiety disorder? If your answer is yes, we think that it is high time for you to use our EX380 Exam Question. Our study materials have confidence to help you pass exam successfully and get related certification that you long for, and we can guarantee that if you don't pass the exam, we will give you full refund.

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q15-Q20):

NEW QUESTION # 15

Create and use a service account token via kubeconfig

Task Information : Create SA ci-bot in ci namespace and generate a kubeconfig that authenticates using its token.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create namespace and service account
- * `oc new-project ci`
- * `oc -n ci create sa ci-bot`
- * The SA will represent automation access.
- * Grant permissions (example: edit in namespace)
- * `oc -n ci policy add-role-to-user edit system:serviceaccount:ci:ci-bot`
- * Without permissions, token auth succeeds but API actions are denied.
- * Generate token (TokenRequest)
- * `TOKEN=$(oc -n ci create token ci-bot)`
- * OCP issues a short-lived token by default (good practice).
- * Create kubeconfig using the token
- * `oc config set-cluster lab --server="$(oc whoami --show-server)" \`
`--insecure-skip-tls-verify=true --kubeconfig=ci-bot.kubeconfig`
- * `oc config set-credentials ci-bot --token="$TOKEN" --kubeconfig=ci-bot.kubeconfig`
- * `oc config set-context ci --cluster=lab --user=ci-bot --namespace=ci \`
`--kubeconfig=ci-bot.kubeconfig`
- * `oc config use-context ci --kubeconfig=ci-bot.kubeconfig`
- * This produces a self-contained kubeconfig for CI automation.
- * Test access
- * `oc --kubeconfig=ci-bot.kubeconfig get pods`

NEW QUESTION # 16

Resolve group synchronization conflicts (prune stale data)

Task Information : Run group sync with pruning to remove stale OpenShift group memberships that no longer exist in LDAP.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Run group sync with prune controls
- * `oc adm groups sync --sync-config=groupsync.yaml --confirm --prune-whitelist=/tmp/whitelist.txt`
- * Prune removes stale memberships/groups, but whitelist protects selected groups from pruning.
- * Verify group membership reflects LDAP
- * `oc describe group < groupname >`
- * Confirms removed users are no longer listed.

NEW QUESTION # 17

Export and import a Kubernetes application (YAML export)

Task Information : Export typical app objects from orders and apply them into a new namespace orders-copy.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Export objects to YAML
- * `oc -n orders get deploy,svc,route,cm,secret -o yaml > orders-app.yaml`
- * Exports key application resources.
- * Create target namespace
- * `oc new-project orders-copy`
- * Apply exported YAML
- * `oc -n orders-copy apply -f orders-app.yaml`
- * Recreates resources (some fields may need adjustment, like namespaces or immutable fields).
- * Validate

* oc -n orders-copy get all

NEW QUESTION # 18

Add tolerations to a deployment

Task Information : Update payments/api deployment to tolerate dedicated=payments:NoSchedule.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

* Patch deployment with toleration

```
* oc -n payments patch deploy api --type=merge -p '{
```

```
* "spec":{"template":{"spec":{"tolerations":[
```

```
* {"key":"dedicated","operator":"Equal","value":"payments","effect":"NoSchedule"}
```

```
* ]}]}
```

```
* }'
```

* Toleration allows pods to schedule onto tainted nodes.

* Verify scheduling

```
* oc -n payments get pods -o wide
```

NEW QUESTION # 19

Identity Management - Create HTPasswd Secret

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Open a terminal with oc access to the cluster.

This Task is CLI-driven and targets the openshift-config namespace.

Step 2: Run the command:

```
oc create secret generic rhds-ldap-secret --from-literal bindPassword=redhatocp -n openshift-config
```

Step 3: Verify that the secret is created successfully.

The lab output shows:

```
secret/rhds-ldap-secret created
```

Detailed explanation:

This step creates a generic secret named rhds-ldap-secret in the openshift-config namespace. The secret stores a key called bindPassword with the value redhatocp. In an identity-provider or LDAP integration workflow, the bind password is used by OpenShift when connecting to the external directory service. Storing this value in a secret is the correct operational pattern because authentication material should not be embedded directly into configuration objects. The openshift-config namespace is specifically important because cluster authentication configuration commonly references secrets and configmaps from that namespace. If the secret name or key is wrong, the authentication configuration that depends on it may fail to validate or connect properly.

NEW QUESTION # 20

.....

After years of hard work, our EX380 guide training can take the leading position in the market. Our highly efficient operating system for EX380 learning materials has won the praise of many customers. If you are determined to purchase our EX380 study tool, we can assure you that you can receive an email from our efficient system within 5 to 10 minutes after your payment, which means that you do not need to wait a long time to experience our learning materials. Then you can start learning our EX380 Exam Questions in preparation for the exam.
