### Palo Alto Networks Certified Network Security Administrator Sample Questions (Q167-Q172):

#### NEW QUESTION # 167

Which security profile should be used to classify malicious web content?

- A. Vulnerability Protection
- B. Antivirus
- C. URL Filtering
- D. Web Content

**Answer: C**

Explanation:

URL Filtering is a security profile that allows you to classify web content based on the URL category and reputation of the website. URL Filtering can help you block access to malicious web content, such as phishing, malware, or command and control sites, as well as enforce acceptable use policies for web browsing. URL Filtering uses the PAN-DB cloud service to provide up-to-date information on the URL categories and reputations of millions of websites. You can configure URL Filtering policies to allow, block, alert, continue, or override web requests based on the URL category and reputation, as well as customize the response pages and exceptions for different user groups. Reference: URL Filtering, Set Up a Basic Security Policy, Updated Certifications for PAN-OS 10.1

#### NEW QUESTION # 168

Given the topology, which zone type should interface E1/1 be configured with?

- A. Layer3
- B. Tap
- C. Virtual Wire
- D. Tunnel

**Answer: B**

#### NEW QUESTION # 169

Match each rule type with its example

**Answer:**

Explanation:

#### NEW QUESTION # 170

Based on the security policy rules shown, ssh will be allowed on which port?

- A. 0
- B. 1
- C. 2
- D. 3
