Salesforce Certified Nonprofit Cloud Consultant Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

A nonprofit organization has a large volume of donation and payment data that it wants to migrate to its NPSP org. Which two large volume data considerations should the consultant discuss with the nonprofit organization? Choose 2 answers

- A. Data skew
- B. Code coverage
- C. Data storage limits
- D. API call limits

Answer: A,C

Explanation:

When migrating a large volume of donation and payment data into an NPSP org, the consultant should discuss the following considerations with the nonprofit organization:

Data Storage Limits:

Salesforce has data storage limits based on the type and edition of the Salesforce instance.

It is important to calculate the volume of data being imported and ensure it does not exceed the available storage.

If necessary, consider purchasing additional data storage or archiving old records to free up space.

Data Skew:

Data skew occurs when a large number of child records are associated with a single parent record.

This can impact performance and cause issues with sharing rules and data visibility.

Plan the data import to distribute records evenly and avoid creating data skew, particularly with high-volume objects like Contacts and Accounts.

By addressing these considerations, the nonprofit can ensure a smooth and efficient data migration process while maintaining optimal system performance and compliance with Salesforce limits.

NEW QUESTION # 84

A nonprofit has employed a contract developer for work involving objects that contain personal and personally identifiable information. The contractor is working in a full copy sandbox.

What should the consultant recommend to ensure the contractor is unable to access this sensitive data?

- A. Configure the contractor's Profile to prevent access to the sensitive data.
- B. Encrypt all fields containing sensitive data with Classic Encryption.
- C. Implement Salesforce Shield and apply it to the sensitive data.
- D. Implement Salesforce Data Mask and mask the sensitive data.

Answer: D

NEW QUESTION # 85

A consultant is training a system admin to prepare for a new release of a particular open source Nonprofit Cloud product. Where are two places the system admin should look for release notes on the product? (Choose 2)

- A. The product's GitHub repository release page.
- B. The Salesforce Trust website.
- C. The Nonprofit Hub group in the Trailblazer Community.
- D. The Nonprofit Cloud release announcement group in the Trailblazer Community.

Answer: A,D

Explanation:

Managing releases for open-source products like NPSP, PMM, or V4S requires a different approach than standard Salesforce seasonal releases. Because these are managed packages developed in an open-source model, the documentation is found in specific community and developer locations.

The Two Primary Sources:

* GitHub Repository Release Page (A): Most Nonprofit Cloud open-source products (like NPSP) are hosted on GitHub (e.g., under the SalesforceFoundation or SFDO-Community organizations). The Releases tab on the repository provides the most technical and immediate information, including the specific version number, bug fixes, and "New Feature" logic directly from the developers.

* Nonprofit Cloud Release Announcement Group (C): This is the official Salesforce Trailblazer Community group for nonprofit customers. Salesforce product managers post "Push" schedules and high-level summaries of what is included in the upcoming package releases. This is where an admin finds out when the package will be automatically pushed to their sandboxes and production orgs.

Why other options are incorrect:

* Nonprofit Hub (Option B): This is a general discussion group for networking and "How-To" questions, but it is not the official repository for release notes.

* Salesforce Trust (Option D): This site monitors system performance, security alerts, and instance status (e.g., "Is NA123 down?"). It does not contain feature-level release notes for managed packages like NPSP.

NEW QUESTION # 86

A consultant is using the Conversion Utility tool to convert an NPSP account model from One-to-One to Household. Which manual action will the consultant need to take after the Conversion Utility tool runs successfully?

- A. Move Opportunities from the One-to-One Accounts to the new Household Accounts and Contacts.
- B. Select a Primary Contact for each Household Account.
- C. Move Tasks from the One-to-One Accounts to the new Household Accounts.
- D. Delete One-to-One account records.

Answer: B

Explanation:

After using the Conversion Utility tool to convert an NPSP account model from One-to-One to Household, the consultant needs to manually select a Primary Contact for each Household Account. Here's the detailed process:

* Run the Conversion Utility Tool:

* Navigate to NPSP Settings.

* Under the "Bulk Data Processes" section, find and run the Conversion Utility tool to convert One- to-One Accounts to Household Accounts.

* Review Converted Records:

* Once the Conversion Utility tool runs successfully, review the newly created Household Accounts.

* Each Household Account should have the associated Contacts correctly linked.

* Select a Primary Contact for Each Household:

* Go to each new Household Account.

* Manually select a Primary Contact from the list of related Contacts. This step is crucial as the Conversion Utility does not automatically set the Primary Contact.

* The Primary Contact field is used in many NPSP features and reports, so ensuring it is correctly set is important.

By performing this manual action, you ensure that the data integrity and functionality within NPSP are maintained after the conversion.

NEW QUESTION # 87

The system administrator accidentally deletes the NPSP 00 - Error Processing job. What should the consultant recommend?

- A. Go to the NPSP Data Imports | Bulk Data Processes | Batch Process Settings to automatically recreate it.
- B. Go to help and create a case and ask Salesforce Support to reschedule this job.
- C. Go to the Recycle Bin and undelete the job.
- D. Go to NPSP Settings | Bulk Data Processes | Batch Process Settings to automatically recreate it.

Answer: D

Explanation:

If the NPSP 00 - Error Processing job is accidentally deleted, you can recreate it using the NPSP settings. Here's how:

Access NPSP Settings:

Navigate to the App Launcher and search for "NPSP Settings".

Go to Bulk Data Processes:

In the NPSP Settings, find the "Bulk Data Processes" section.

Batch Process Settings:

Click on "Batch Process Settings".

Here, you can find options to recreate various batch jobs, including the NPSP 00 - Error Processing job.

Recreate the Job:

Follow the prompts to recreate the NPSP 00 - Error Processing job.

Save your settings.

By using the NPSP Settings to recreate the job, you ensure that the necessary error processing is back in place without needing to manually configure or contact support.
